

# Table of Contents

## Circuit Simulation

Denk G. A new efficient numerical integration scheme for highly oscillatory electric circuits .....	1
Grund F. Numerische Lösung von hierarchisch strukturierten Systemen von Algebra-Differentialgleichungen .....	17
Günther M., Rentrop P. Partitioning and multirate strategies in latent electric circuits .....	33
Kiehl M. Circuit simulation — an application for parallel ODE solvers? .....	61
März R. Numerical stability criteria for differential-algebraic systems .....	73
Mathis W. Analysis of linear time-invariant networks in the frequency domain .....	83
Schmidt W. Limit cycle computation of oscillating electric circuits .....	91
Sieber E.-R, Feldmann U., Schultz R., Wriedt H. Timestep control for charge conserving integration in circuit simulation .....	103
Taubert K. Ein Zusammenhang zwischen Waveformrelaxation und Iterationsverfahren für nichtlinear gestörte Gleichungen .....	115

## VIII

Wiedl W.  
Multilevel-Newton-Verfahren in der  
Transientenanalyse elektrischer Netzwerke ..... 127

Wriedt H.  
Transientensimulation elektrischer Netzwerke mit TRBDF ..... 133

Zheng Q.  
The transient behavior of an oscillator ..... 143

### Device Simulation

Albinus G.  
Numerical simulation of the carrier transport  
in semiconductor devices on the base of an energy model ..... 157

Gajewski H.  
On uniqueness of solutions to the drift-diffusion-model  
of semiconductor devices ..... 171

Gärtner K.  
On restrictions for discretizations of the  
simplified linearized van Roosbroeck's equations ..... 185

Hiptmair R., Hoppe R. H. W.  
Mixed finite element discretization of continuity equations  
arising in semiconductor device simulation ..... 197

Kerkhoven T.  
A piecewise linear Petrov-Galerkin analysis of the box-method ..... 219

Mittelmann H. D., Chang K.-T., Jankowski D. F., Neitzel G. P.  
Stability analysis of thermocapillary convection  
in semiconductor crystal growth ..... 237

Montrone F. The method of Baliga-Patankar and 3-D device simulation .....	251
Paffrath M. A mass conserving moving grid method for dopant simulation .....	267
Wick J. Numerical approaches to the kinetic semiconductor equations .....	281
Wrzosek D. The non-stationary semiconductor model with bounded convective velocity and generation/recombination term .....	293
