

Table of Contents

Volume I

Investigation of Oldroyt's viscoelastic model when viscous coefficient tends to zero <i>P. E. Sobolevskii</i>	1
Nonlinear PDE problems in electrophotography <i>A. Friedman</i>	13
A special class of maximum principles with applications to nonlinear boundary value problems <i>L. E. Payne</i>	25
Nonlinear mathematics in nonacademic settings <i>J. Bounds, D. Ross, J. Chandra, and P. Davis</i>	41
Motion of a graph by nonsmooth weighted curvature <i>T. Fukui and Y. Giga</i>	47
Some results on heat flow in electric conductors <i>S. N. Antontsev and M. Chipot</i>	57
Global classical solutions to fully nonlinear wave equations <i>T.-t. Li (Li Da-qian)</i>	67
Solitons and domains in dipole chains <i>E. Infeld, G. Rowlands, J. M. T. Thompson, and H. Zorski</i>	73
Nonlinear instabilities of steady and oscillatory wave convection in a rotating system <i>D. N. Riahi</i>	79
Bifurcations and chaos in predator-prey models with delay <i>S. Roy Choudhury</i>	87
On a new variant degree theory of mapping and its application <i>M. A. Efendiev</i>	111
Solvability of semilinear operator equations and periodic solutions of differential equations <i>P. S. Milojević</i>	125

Solutions of semilinear equations in cones and wedges <i>J. R. L. Webb</i>	137
On a nonlinear elliptic problem with subcritical and critical Sobolev exponent <i>M. Zuluaga</i>	149
Existence and bifurcation results for some semilinear elliptic equations on R^N <i>W. Rother</i>	161
Some remarks about the existence of positive solutions for elliptic systems <i>A. Cañada and J. L. Gámez</i>	167
Sub- and supersolutions of nonlinear elliptic and parabolic problems <i>K. Singh</i>	175
Positive solutions and boundary value problems of singular and nonsingular type <i>D. O'Regan</i>	185
On the asymptotic behavior of laminar flow through a porous pipe <i>C. Lu</i>	201
The monotone method for third order boundary value problems <i>A. Cabada</i>	211
Duality and variational principles for nonlinear hyperbolic equations <i>A. Nowakowski and A. Rogowski</i>	223
Decay and global existence for some nonlinear dissipative wave equations <i>M. Nakao</i>	233
On the philosophy of the spectral variable <i>R. Carroll</i>	241
Wave propagation in uniaxial nonconducting nonlinear thermoelastic solids <i>M. C. Singh and D. V. D. Tran</i>	253
Approximation of dissipative hereditary systems <i>R. C. MacCamy</i>	269
Stefan problems in several space variables with dynamic boundary conditions <i>T. Aiki</i>	281
Existence and multiplicity of periodic solutions for semilinear parabolic equations <i>N. Hirano</i>	291
Boundary integral solution of a nonlinear heat conduction problem <i>G. C. Hsiao and J. Saranen</i>	299
On the existence of traveling waves in reaction-diffusion systems <i>K. R. Schneider</i>	311

The strong maximum principle for cooperative periodic-parabolic systems and the existence of principal eigenvalues <i>I. Antón and J. López-Gómez</i>	323
Blowing-up of solutions of semilinear parabolic equations <i>T. Itoh</i>	335
An existence and uniqueness theorem for solutions of nonlocal parabolic partial differential equations <i>D. Jackson</i>	341
Open problems in nonlinear ordinary boundary value problems arising from the study of large-amplitude periodic oscillations in suspension bridges <i>A. C. Lazer and P. J. McKenna</i>	349
One species extinction in an autonomous competition model <i>S. Ahmad and A. C. Lazer</i>	359
Periodic stability and reachability of nonlinear parabolic equations under boundary periodic perturbations <i>K. Naito</i>	369
A criterion for asymptotic stability based on topological degree <i>R. Ortega</i>	383
Periodic solutions and subharmonic solutions for a class of planar systems of Lotka-Volterra type <i>T. Ding and F. Zanolin</i>	395
Periodic boundary value problems for impulsive integro-ordinary differential equations <i>J. Nieto</i>	407
Some multiplicity results for subharmonic solutions to second order nonautonomous systems <i>M. Girardi and M. Matzeu</i>	417
New results in quenching <i>C. Y. Chan</i>	427
On the life span of solutions to nonlinear wave equations <i>M. A. Rammaha</i>	435
Conversion and penetration fronts in combustion <i>I. Stakgold</i>	445
The transition from decay to blow-up in some reaction-diffusion-convection equations <i>M. Fila and P. Sacks</i>	455

Numerical experiments on the Ginzburg–Landau equations <i>M. K. Kwong</i>	465
Counterexamples to the existence of inertial manifolds <i>J. Mallet-Paret, G. Sell, and Z. Shao</i>	477
Inverse problems versus an algebraic spectral method for nonlinear evolution equations <i>P. C. Sabatier</i>	487
A finite difference scheme for an inverse heat equation <i>J. R. Cannon, Y. Lin, and S. Xu</i>	497
Nonlinear ill-posed problems <i>A. N. Tikhonov, A. S. Leonov, and A. G. Yagola</i>	505
Maximum entropy regularization of nonlinear ill-posed problems <i>H. W. Engl and G. Landl</i>	513
Variational derivatives in function spaces <i>E. P. Hamilton and M. Z. Nashed</i>	527
Radial and nonradial solutions of a nonlinear scalar field equation <i>T. Bartsch</i>	537
A geometric method for the periodic problem <i>R. Srzednicki</i>	549
Large perturbations of Toda lattices <i>B. Ruf</i>	561
Distribution of mass principle and its applications to nonlinear elliptic equations <i>W. Chen</i>	571
Attractors of bipolar and non-Newtonian viscous fluids <i>F. Bloom</i>	583
Nonlinear dynamics in the low Reynolds number cylinder wake <i>D. J. Olinger</i>	597
The present status of the theory of the flow of a compressible viscous fluid through a pipe or parallel-wall channel <i>J. M. Russell</i>	611
Laminar and turbulent film flows <i>R. J. Gribben</i>	623

Sensitivity equations for the $k - \epsilon$ turbulence model for ill-posed inverse problems in computational fluid dynamics <i>L. Krishnamurthy</i>	631
Large-time behavior of reaction-diffusion systems modeling combustion with complex chemistry <i>J. D. Avrin</i>	651
Stability analysis of the traveling wave solutions in burning solid propellants <i>C. D. Pagani and M. Verri</i>	661
Stability of travelling waves in combustion problems: a fully nonlinear approach <i>C.-M. Brauner, A. Lunardi, and Cl. Schmidt-Lainé</i>	667
On the numerical analysis of buckling of general thin shells <i>M. Bernadou and B. Lallanne</i>	681
Random fields in nonlinear structural problems <i>E. Bielewicz, J. Górski, and H. Walukiewicz</i>	691
Geometrically nonlinear analysis of inelastic damaged shells <i>I. Kreja, R. Schmidt, O. Teyeb, and D. Weichert</i>	701
Moderate rotations of shells under circulatory loading <i>W. Altman and A. F. Palmerio</i>	711
Further results on postbuckling behavior of shear deformable plates and shallow shells accounting for initial geometric imperfections <i>M.-Y. Chang and L. Librescu</i>	723
Failure prediction in composite laminates according to the layerwise plate theory <i>Y. S. N. Reddy and J. N. Reddy</i>	739
A theory for nonlinear static and transient analysis of composite laminates <i>R. Schmidt</i>	753
Numerical methods for ODEs with hysteresis <i>L. Tavernini</i>	765
P.D.E.s with hysteresis operators <i>A. Visintin</i>	775
Some limit results for relays <i>T. I. Seidman</i>	787
The Mróz model: A hysteresis operator for rate-independent plasticity <i>M. Brokate, K. Dressler, and P. Krejčí</i>	797

A differential model of fatigue in elastoplastic materials <i>P. Krejčí</i>	807
Orientable and nonorientable minimal surfaces <i>J. Jost</i>	819
Continuation methods in nonlinear elasticity <i>S. S. Antman</i>	827
Bifurcation for variational inequalities and applications to elasticity <i>F. Schuricht</i>	839
Infinite dimensional integrals in classical, stochastic and quantum nonlinear problems <i>S. Albeverio</i>	849
Asymptotic formulas in capillarity <i>E. Miersemann</i>	861
An envelope theorem for weak solutions of quasilinear elliptic boundary value problems <i>S. Carl</i>	869
Group theoretical methods for finite-difference modeling <i>V. A. Dorodnitsyn</i>	879
Two parameter problems for the p -Laplacian <i>P. A. Binding and Y. X. Huang</i>	891
Positive solutions of semilinear Neumann problems and Sobolev type inequalities <i>Adimurthi and S. L. Yadava</i>	901
A free boundary eigenvalue problem <i>R. Meyer-Spasche</i>	911
Measure valued solution of non-Newtonian compressible heat conductive fluid <i>S. Matusu-Necasová</i>	925
Asymptotics for a class of weakly nonlinear wave equations with applications to some problems <i>W. T. van Horssen</i>	945
Path optimization in flat and wrinkled labyrinths using arrays of active nonlinear circuits: traveling wave and its failure <i>V. Pérez-Muñuzuri, V. Pérez-Villar, J. L. F. Porteiro, and L. O. Chua</i>	953

An Oregonator based model for the influence of a radial electric field on the dynamics of spiral waves <i>J. L. F. Porteiro, V. Pérez-Muñuzuri, M. Gomez-Gesteira, A. Pérez-Muñuzuri, and V. Pérez-Villar</i>	965
Theorem about a weak impulsive nonlinear parabolic differential inequality together with weak impulsive nonlocal nonlinear inequalities <i>L. Byszewski</i>	977
Products of distributions in mathematical physics <i>A. Palanques-Mestre</i>	989
A qualitative analysis of the potential and current driven semiconductor equations <i>F. Alabau</i>	1001
Author Index	1011
