

Table of Contents

Volume III

Nonlinear elliptic systems arising from control theory and differential games <i>A. Bensoussan and J. Frehse</i>	2029
Aspects of singular perturbation theory in physiology <i>J. Cronin</i>	2045
Quasi-variational systems <i>J. Serrin</i>	2055
New spectral representations of mixing dynamical systems <i>I. Antoniou, I. Prigogine, and S. Tasaki</i>	2069
Differential inclusions without convexity: A survey of directionally continuous selections <i>A. Bressan</i>	2081
Some problems of existence, uniqueness and regularity in the calculus of variations <i>P. Marcellini</i>	2089
On the existence problem in the Calculus of Variations <i>A. Cellina</i>	2097
A class of upper semicontinuous differential inclusions without convexity <i>G. Colombo</i>	2107
Constructive aspects of fixed point theory for nonexpansive mappings <i>T. Bühler and W. A. Kirk</i>	2115
On the growth properties of the homology of free loop spaces on configuration spaces <i>E. Fadell and S. Husseini</i>	2127
Borsuk-Ulam theorems, the Lusternik-Schnirelmann category and index theories <i>T. Bartsch</i>	2135
Monotone methods with applications to nonlinear analysis <i>S. Heikkilä</i>	2147

Spherical algorithms and evaluation of the fixed point set 9 <i>E. A. Galperin</i>	2159
Fixed points of acyclic maps on topological vector spaces <i>S. Park</i>	2171
Convergence of accretive operators <i>Y. S. Lee and S. Reich</i>	2179
Existence of solutions of nonlinear equations with perturbations of monotone operators in reflexive Banach spaces <i>Z. Guan</i>	2187
Recent results involving compact perturbations and compact resolvents of accretive operators in Banach spaces <i>A. G. Kartsatos</i>	2197
Braess's paradox and power-law nonlinearities in networks II <i>B. Calvert and G. Keady</i>	2223
On the invertibility of $I \pm \exp(-tA)$, $t > 0$, with A maximal monotone <i>V. Barbu and N. H. Pavel</i>	2231
A global existence theorem on nonlinear evolution equations <i>Y. You</i>	2239
Existence of solutions of nonlinear functional differential equations in L^p spaces <i>K. Sik Ha and K. Shin</i>	2249
The global attractor of the fifth order KdV equation <i>J. Cao</i>	2261
On the blow-up of solutions to some semilinear parabolic systems arising in chemical reaction modelling <i>S. L. Hollis and J. J. Morgan</i>	2273
Asymptotic behavior and periodic forcing in time for the solutions of a nonlinear system representing a phase change with dissipation <i>A. Damlamian and N. Kenmochi</i>	2281
Implicit functions defined by generalized equations <i>A. L. Dontchev and W. W. Hager</i>	2289
Non-smooth subdifferentials: their calculus and applications <i>A. D. Ioffe</i>	2299
Generalized differentiation and stability of solution maps to parametric variational systems <i>B. Mordukhovich</i>	2311

The linear nonconvex generalized gradient <i>J.S. Treiman</i>	2325
Second order necessary conditions for nonsmooth optimum problems with constraints <i>Zs. Páles and V. M. Zeidan</i>	2337
Wellposedness of second-order nonlinear abstract differential equations with multivalued boundary conditions: Applications to von Kármán systems <i>I. Lasiecka</i>	2347
Some stability results for vector optimization problems in partially ordered topological vector spaces <i>E. M. Bednarczuk</i>	2371
Some nonlinear results for abstract differential equations <i>S. Zaidman</i>	2385
Some applications and extensions of P -coercive variational inequalities <i>D. D. Ang and L. K. Vy</i>	2391
On semilinear wave equations at resonance <i>J. Berkovits and V. Mustonen</i>	2399
Approximate solvability of nonlinear equations and related results in control theory <i>M. C. Joshi</i>	2409
The Newton-Kantorovich method for nonlinear integral operators <i>J. Appell</i>	2419
A uniqueness theorem for a nonlinear integral equations of gravimetry <i>D. D. Ang, R. Gorenflo, and L. K. Vy</i>	2423
Applications of Pareto optimality of a mapping to mathematical economics <i>E. Tarafdar</i>	2431
On ψ -minimal, P -monotone trajectories of nonautonomous differential inclusion in \mathbb{R}^N <i>S. Hu and N. S. Papageorgiou</i>	2441
On the solution of some nonlinear boundary value problem <i>G. Bognár</i>	2449
Mathematical controllability theory of the growth of wealth of nations <i>E. N. Chukwu</i>	2459
Bilateral interactions and aggregate fluctuations <i>S. N. Durlauf</i>	2471

Short-run decisions on price, output, and inventories in a dynamic model of the firm <i>R. J. Rossana</i>	2481
Dynamical systems defined by infinite horizon optimal control problems <i>M. Sieveking</i>	2493
Geometry and nonlinear differential equations <i>W. F. Shadwick</i>	2503
Pareto solution of a cone variational inequality and Pareto optimality of a mapping <i>E. Tarafdar</i>	2511
Output tracking of nonanalytic trajectories for nonlinear systems <i>L. R. Hunt, G. Meyer, and R. Su</i>	2521
Linearization and approximation of control systems <i>E. O. Roxin</i>	2531
The shape design problem for systems with distributed parameters <i>S. P. Ohezin</i>	2541
Optimality conditions for controls of infinite dimensional systems <i>X. Li</i>	2549
Two norm approach in stability analysis of optimization and optimal control problems <i>K. Malanowski</i>	2557
On nonlinear minimum norm control problems <i>W. Krabs</i>	2569
Generalizations of the Lusternik Theorem and applications to nonsmooth and abnormal problems in optimization and optimal control <i>U. Ledzewicz and S. Walczak</i>	2583
Optimal shape design of plates and shells with obstacles <i>M. Rao and J. Sokolowski</i>	2595
Some results on the viscosity solutions of fully nonlinear equations containing non-local terms <i>K. Ishii and N. Yamada</i>	2605
Optimal control and relaxation of systems governed by Volterra integral equations <i>S. Aizicovici and N. S. Papageorgiou</i>	2617

Stability of a class of nonlinear singularly perturbed systems that contain marginally stable boundary layer systems <i>M. Corless and D. Da</i>	2627
A universal stabilizer for a class of nonlinear systems <i>E. P. Ryan</i>	2633
Computational methods for boundary optimal control of incompressible flows <i>L. S. Hou</i>	2643
Computational hybrid-control techniques in hydrodynamics <i>T. P. Svobodny</i>	2655
Optimal control problems of viscous flow <i>Y.-R. Ou</i>	2667
A direct method for parameter estimation in distributed systems <i>D. W. Brewer and R. K. Powers</i>	2679
Uniformly stable approximation of the LQR problem <i>Z. Liu and S. Zheng</i>	2687
On a mathematical model of phase transitions in materials with memory <i>R. D. Spies</i>	2697
Overview of optimal trajectories for aeroassisted orbital transfer <i>A. Miele</i>	2705
Long term planning of hydro-thermal power systems <i>K. H. Wong and L. S. Jennings</i>	2723
On the optimal drug administration of a discrete cancer chemotherapy model <i>C. S. Lee and V. Rehbock</i>	2735
The neural network approach to several nonlinear control problems <i>C. J. Goh</i>	2749
A unified computational approach to optimal control problems <i>K. L. Teo</i>	2763
Some trajectory-following algorithms for min-max optimization <i>T. L. Vincent, B. S. Goh, and K. L. Teo</i>	2775
On the usage and applications of parameter optimization software OptiA in constrained optimal control <i>J. Doležal and J. Fidler</i>	2779
Construction of numerical solutions of permanent heavy waves of two liquids <i>N. Moussa</i>	2791

Asymptotic theorems about compression and expansion of cones in Banach spaces for multivalued maps differentiable at the origin and infinity <i>D. Violette and G. Fournier</i>	2803
Bayesian statistical approach to design of reliability models <i>V. P. Savchuk</i>	2815
Determine optimal burn-in time for highly integrated circuit systems <i>W.-T. K. Chien and W. Kuo</i>	2827
A nonhomogeneous Poisson process for software reliability <i>N. Suresh and A. N. V. Rao</i>	2837
Multiple category screening procedures <i>A. Mouhab and R. A. Johnson</i>	2851
Is your model chaotic? A consistence simulation-based test <i>I. Domowitz and M. A. El-Gamal</i>	2861
Economic models of survival under uncertainty <i>S. Roy</i>	2873
Aggregation in mathematical models of manufacturing systems <i>A. A. Pervozvanskii</i>	2885
Nonlinear interaction dynamics of multiple mobile automata <i>P. K. C. Wang</i>	2897
Some unsolved problems in optimal design theory: Interaction of mathematical modelling of large structural, mechanical or chemical systems with their design <i>V. Komkov</i>	2909
Stochastic stability and bifurcation analysis of gated radar range trackers <i>R. E. Gover, E. H. Abed, and A. J. Goldberg</i>	2931
The twist-and-flip map <i>R. Brown and L. Chua</i>	2943
Bifurcations and chaos from Chua's circuit: A state-of-the-art review <i>M. J. Ogorzatek</i>	2957
Nonlinear dynamics in cellular neural networks <i>J. A. Nossek and F. Zou</i>	2969
CNN: A new paradigm of nonlinear dynamics in space <i>L. O. Chua and T. Roska</i>	2979
Geometric invariants of chaotic attractors encountered in Chua's circuit <i>M. J. Ogorzatek and Z. Galias</i>	2991

Nonstandard methods in metric fixed point theory <i>M. A. Khamsi</i>	3003
The minimax principle of mechanics and its application to the optimal control problem for robot manipulators <i>Ye. S. Pyatnitskiy</i>	3013
On a fixed point theorem of Jungck <i>H. K. Pathak</i>	3019
A nonlinear ergodic theorem for 'almost-orbits of nonlinear contraction semigroups in Banach spaces <i>K.-K. Tan and H.-K. Xu</i>	3025
Author Index	3037
