## Volume IV

A simple ODE with more than 20 strange attractors <i>L. O. Chua</i>	3043
Applications of generalized functions to propagating and deforming interfaces <i>R. P. Kanwal</i>	3055
Conservation laws for integro-differential equations <i>V. S. Vladimirov</i>	3069
Dynamics of neuro-muscular control with delayed displacement-dependent feedback <i>J. G. Milton and T. Ohira</i>	3085
Oscillations and chaos in nonlinear delay differential equations with applications to physiology <i>U. an der Heiden</i>	3095
Multiple-delayed differential equations as models for biological control systems <i>S. A. Campbell and J. Bélair</i>	3109
Lattices with spatially extended coupling and the statistical properties of neural populations <i>M. C. Mackey and J. G. Milton</i>	3119
Dependence on initial conditions in nonlocal PDE's and hereditary dynamical systems <i>R. Crabb, J. Losson, and M.C. Mackey</i>	3125
Biased preference models for partnership formation <i>J. M. Hyman and J. Li</i>	3137
AIDS in the Heterosexual Population <i>D. E. Kirschner</i>	3149
Completion of mixing matrices for non-closed social networks <i>S.-F. H. Schmitz and C. Castillo-Chavez</i>	3163

Modelling vector-host disease transmission and food web dynamics through the mixing/pair formation approach <i>J. X. Velasco-Hernandez and C. Castillo-Chavez</i>	3175
Simple models for interactions of the HIV virus and the immune system: Can we point out to one specific threshold for the onset of AIDS? <i>L. E. Harnevo</i>	3187
Variability infectivity in communicable disease models <i>F. Brauer</i>	3201
Stochastic and deterministic models in epidemiology <i>C. Castillo-Chavez, S. Fridman, and X. Luo</i>	3211
A pair formation approach to modeling inheritance of social traits <i>S. Lubkin and C. Castillo-Chavez</i>	3227
Information processing and practical implementation of “Biochemical neuron” <i>M. Okamoto, Y. Maki, and T. Sekiguchi</i>	3235
Nonlinear control and self-organization <i>H. V. Westerhoff, P. R. Jensen, D. Kahn, B. N. Kholodenko, and P. Richard</i>	3245
Analysis of two hypothetical mechanisms of photosynthetic oscillations by means of mathematical skeleton models <i>C. Giersch and W. Rovers</i>	3255
The theory of the control of metabolism <i>J.-P. Mazat, C. Reder, and T. Letellier</i>	3267
Mathematical modelling of enzymic systems; simulation, control analysis and optimization <i>R. Heinrich</i>	3277
Selection of enzymatic mechanisms which account for simplicity in the evolution of metabolic pathways <i>E. Meléndez-Hevia, T. G. Waddell, and F. Montero</i>	3291
Mathematical description of regulation in metabolic systems: The regulatory potential <i>J. H. S. Hofmeyr and A. Cornish-Bowden</i>	3305
Self-activation and self-inactivation kinetics of enzymes: theoretical aspects and a mathematical model for the particulate prostaglandine synthase from ovine vesicular glands <i>H. G. Holzhütter, C. Schewe, and T. Schewe</i>	3311
Power-law formalism: A canonical nonlinear approach to modeling and analysis <i>M. A. Savageau</i>	3323

S-system analysis of the TCA cycle in <i>Dictyostelium discoideum</i> <i>F. Shiraishi</i>	3335
A monomial-based version of Newton's method <i>S. A. Burns</i>	3347
Assessment of the regulatory properties of a metabolic pathway: Parameter estimation from steady-state measurements <i>A. Sorribas and M. Cascante</i>	3357
How many variables? Some comments on the dimensionality of nonlinear systems <i>E. O. Voit</i>	3369
Simple dynamical systems for bursting and spindling <i>J. L. Hindmarsh and R. M. Rose</i>	3381
A two-component discrete dynamical model of the bursting rhythm caused by veratramine in the pacemaker of the heart <i>C. D. Thron</i>	3389
On the clonal inheritance model of cell proliferation <i>D. N. Stivers and M. Kimmel</i>	3401
Emergence of stable DNA repeats from random sequences under unequal sister chromatid exchange <i>K. Baggerly and M. Kimmel</i>	3409
A model for retrieving the dynamics of gene amplification from episomes to intrachromosomal amplification <i>L. E. Harnevo and Z. Agur</i>	3419
New mathematical methods for evaluating toxicity of anti-cancer drugs and AZT <i>L. Cojocaru and Z. Agur</i>	3433
A particle method for population shock waves with application to synchronization of bacterial culture growth <i>C. Chiu and F. C. Hoppensteadt</i>	3443
Simulation of drug-inhibited cell proliferation with a model of clonal inheritance of cell lifetimes <i>Y. Gusev and D. E. Axelrod</i>	3455
Resonances in periodic chemotherapy scheduling <i>G. F. Webb</i>	3463
A review of the effect of radiation transfer on the simulation of atmospheric circulations of different scales <i>M. J. Leach and S. Raman</i>	3475

Effects of thermal forcing in atmospheric shear flows with critical level <i>Y.-L. Lin</i>	3491
Baroclinic-barotropic instabilities and energy transfers in the Gulf Stream <i>L. C. Sun and L. J. Pietrafesa</i>	3515
Turbulence structure in the atmospheric boundary layer—data and models <i>K. S. Rao</i>	3533
A review of coupled ocean-atmosphere models <i>N. Reddy and S. Raman</i>	3545
Review of recent advances in the development of semi-Lagrangian numerical models in meteorology <i>F. H. M. Semazzi</i>	3559
Atmospheric dispersion in low wind conditions <i>A. K. Yadav, M. Sharan, and M. P. Singh</i>	3567
A review of non-hydrostatic numerical models for the atmosphere <i>L. Xu, S. Raman, and R. V. Madala</i>	3595
The stagnant flow upstream of hills or mountains <i>K. Kitabayashi</i>	3611
Micro-meteorological studies in air quality management <i>P. Goyal, M. P. Singh, and A. Gulati</i>	3619
Nonlinear analysis of stability, oscillations and control of immunological processes <i>V. M. Matrosov, N. A. Karatueva, and N. V. Banina</i>	3633
Mathematical modeling of cellular interaction dynamics in multicellular tumor spheroids <i>Ž. Bajzer, M. Marušić, and S. Vik-Pavlović</i>	3645
Polynomial networks for optimal nonlinear filtering <i>J. T.-H. Lo, M. J. Sanders, Jr., and S. K. Ng</i>	3655
Analysis of the computational characteristics of adaptive resonance theory neural nets <i>L. V. Fausett</i>	3669
Differentiating and pruning multilayer feedforward neural networks <i>J. T.-H. Lo and L. Yu</i>	3681
Stability analysis of neural networks using vector Lyapunov functions <i>S. Köksal and D. W. Fausett</i>	3695

Neural network approach to optimal filtering <i>J. T.-H. Lo</i>	3705
Signal recognition using a dynamic time warping neural network <i>F. A. Unal and N. Tepedelenlioglu</i>	3717
Development and analysis of a mathematical model for a plant-herbivore system <i>L. J. S. Allen, M. K. Hannigan, and M. J. Strauss</i>	3723
The effects of asymmetric competition on competitive outcome <i>K. M. Crowe</i>	3733
Persistence in Kolmogorov population models with time delay <i>Y. Cao, J. Fan, and T. C. Gard</i>	3741
Global variables and population dynamics prey-predator models with individual activity sequences <i>P. Auger</i>	3753
The computer-aided study of dynamics in the system primary tumor, cytotoxic lymphocytes, metastas <i>V. A. Kuznetsov and E. I. Alekseeva</i>	3763
Folding at the genesis of chaos <i>B. Deng</i>	3765
Ginzburg-Landau type models for superconductivity <i>Q. Du, M. Gunzburger, and J. Peterson</i>	3779
Time-dependent Ginzburg-Landau models for superconductivity <i>Q. Du</i>	3789
Asymptotic analysis of the Ginzburg-Landau model of superconductivity: Reduction to a free boundary model <i>S. J. Chapman</i>	3803
Dynamics of vortices in superconductors <i>E. Weinan</i>	3811
Computation of singular solutions in the micromagnetics of thin films <i>T. Brule and M. E. Henderson</i>	3823
Energy transport systems for semiconductors: Analysis and simulation <i>J. W. Jerome and C.-W. Shu</i>	3835
Nonlinearities in drift-diffusion semiconductor modeling <i>T. Kerkhoven</i>	3847

Some classes of iterative methods for finding zeros of polynomials and analytic functions <i>M. S. Petković</i>	3859
Fine and coarse grained parallel implementations of polynomial root finding algorithms <i>E. Fleury and P. Fraigniaud</i>	3871
Divide and conquer techniques for the polynomial root-finding problem <i>D. Bini</i>	3885
A unified approach to some classes of simultaneous inclusion methods for polynomial zeros <i>L. Y. Atanassova and J. P. Herzberger</i>	3897
WKB procedure for Schrödinger type difference equations <i>R. E. Mickens and I. Ramadhani</i>	3907
Toward an efficient and stable determination of spectra of a general matrix and a more efficient solution of the Lyapunov equation <i>G. Howell</i>	3913
Interfacial wave theory of dendritic growth and a comparison with experiments <i>J.-J. Xu</i>	3929
Thomas-Fermi model calculations of one and two dimensional lattices <i>A. Rabinovitch, J. Komlos, and M. Friedman</i>	3941
Author Index	3949
