Invited Lectures

Asymptotics – an indispensable complement to thought, computation and experiment in applied mathematical modelling D. G. Crighton	3
Mathematical modelling in solid mechanics M. Frémond	21
Mathematical models for the (ferro)silicon process S. A. Halvorsen	47
Mathematical models for phase transitions J. Sprekels	71
Reactive contaminant transport modeling for heterogeneous porous media S. E. A. T. M. Van der Zee	97

Contributed Papers

Legendre spectral collocation approximation to the Helmholtz equation: preconditioning and domain decomposition methods S. Albertoni, L. Deidda, A. Ferrari, E. Zampieri	123
Models for water percolation during the preparation of espresso coffee G. Baldini, M. Petracco	131
Memory-function approach to low-dimensional electron systems R. Bertoncini	139
Solid conversion and travelling combustion waves H. Byrne, J. Norbury	149
Statistics of spatially structured stochastic processes modelling crystallization of polymers V. Capasso, M. De Giosa, A. Micheletti, R. Mininni	157
Models experiments, and numerical simulation of isothermal crystallization of polymers R. Caselli, S. Mazzullo, M. Paolini, C. Verdi	167
Some new results about the temperature jump for a mixture C. Cercignani, M. Lampis, A. Lentati	175
Phase change problems in materials with memory P. Colli, M. Grasselli	183
A functional approach to the problem of evaluating the velocity for a population of particles settling in a liquid E. De Angelis, F. Rosso	191

Simulation levels and differential-algebraic equations in technical simulation G. Engl, P. Rentrop	199
Some Research activities at CRS4 within the field of industrial mathematics G. Fotia	207
Controlling the flow rate of a Bingham fluid undergoing stress-induced degradation in a pipe R. Gianni, L. Pezza, F. Rosso	217
Mathematical modeling of the formation of hot spots in a coaxial electrical discharge G. Gnani, F. T. Gratton, L. Bender	225
Vehicle crash reconstruction with uncertain input parameters W. Hugemann, H. Maurer	233
Defect discrimination in citrus via neural networks S. Ingrassia, E. Commis, A. M. Anile	239
Numerical determination of drop size distributions in extraction columns T. Kronberger, A. Ortner, W. Zulehner, H. J. Bart	247
A nondifferential multiple criteria optimization method applied to continuous casting process K. Miettinen, M. M. Mäkelä	255
Applications of the discrete Boltzmann equation for gases with chemical reactions R. Monaco, M. Pandolfi Bianchi	263
Mathematical modelling of the motion of hard contact lenses, Part I J. A. Moriarty, E. L. Terrill	271
Mathematical modelling of the motion of hard contact lenses, Part II J. A. Moriarty, E. L. Terrill	279
An iterative asymptotic procedure for the analysis of thin cracks A. B. Movchan, J. R. Willis	285
Some effects of axial heat conduction in the walls of a detonator delay element A. H. C. Norgrove, A. F. Jones, J. A. King-Hele	293
Simple adaptive control of a discrete almost strict positive real heat treatment system R. D. Reinke, D. Prätzel-Wolters	301
Washing of a bundle of fibres by pulling over a submerged obstacles C. M. Robinson	309
Some useful applications of high order finite elements T. Scapolla	317
Stability of thermal equilibrium for a semiconductor model including traps C. Schmeiser	325

A numerical impedance tomography algorithm E. Somersalo	331
Computation of compressible fluid flows around complex geometries L. Stolic	339
Resonant responses and chaos in nonlinear drillstring dynamics G. H. M. Van der Heijden	347
Anisotropic diffusion filters for image processing based quality control J. Weickert	355
Generalized jump conditions for two-phase flow models K.-D. Werner	363
The onset of steady Marangoni convection in a spherical geometry S. K. Wilson	371
A model for optical fibre tapers L. Y. Yao, H. Neunzert, W. Schreiner, M. K. Ahmad	379
 Minisymposium on Mathematical Finance	
Exotic financial options J. N. Dewynne, P. Wilmott	389
An integral equation for the value of a stop-loss option A. D. Fitt, P. Wilmott, J. N. Dewynne	399
Black-Scholes models for financial derivative products S. D. Howison, J. N. Dewynne	407
A class of one-factor interest rate models R. Klugman, P. Wilmott	419
A comparison of hedging strategies E. Whalley, P. Wilmott	427
