

# Table of Contents

<i>Acknowledgements</i> . . . . .	7
Structure of the Workshop . . . . .	9
<b>1. Factors Inside and Outside Mathematics which are Important in the Generation and Development of New Mathematic Disciplines.</b>	
<i>L. Schmetterer</i> The Development of Mathematics and its Social Economical Background . . . . .	15
<i>A. Jensen</i> The Principle of Simplification, and Delay in the Creation and Use of Mathematical Disciplines . . . . .	19
<i>B. Bojarski</i> The Possibilities of Mathematics and Some Anxieties in the Mathematical Community . . . . .	21
<i>P. Kirmser</i> Comments on the Nature of Present and Future Success in Applied Mathematics . . . . .	24
<i>Discussion</i> . . . . .	28

## 2. Estimated Future Trends in the Development of Mathematics and of its Relations with the Non-Mathematical World.

<i>M. Kendall</i>	Theoretical Statistics and the Real World . . . . .	34
<i>S. Klaczko</i>	Cartesian Products and Factor Set Distributions as Models of Mathematical Innovation . . . . .	38
<i>W. Haken</i>	Some Thoughts on Mathematics in the Real World . . . . .	42
<i>W. Böge</i>	Technological Developments and the Effectivity of Mathematics . . . . .	45
<i>Discussion</i>	. . . . .	47

## 3. Difficulties and Possibilities in Disseminating and Popularizing Mathematical Ideas, Methods and Techniques to Colleagues within Other Mathematical Fields and to the World at Large.

<i>R. Seltén</i>	Accessibility of Mathematical Results . . . . .	53
<i>M. El Tom</i>	The Proliferation and Popularization of Mathematical Results: The Needs of Underdeveloped Countries . . . . .	54
<i>R. A. Scriven</i>	The Communication of Mathematical Results to the Real World . . . . .	58
<i>B. V. Gnedenko</i>	Popularisation of Mathematics, Mathematical Ideas and Results . . . . .	60
<i>A. C. Bajpai</i>	An Editor's View . . . . .	62
<i>Discussion</i>	. . . . .	64

## 4. Discussion and Initiation of Concrete Initiatives.

<i>Discussion</i>	. . . . .	71
-------------------	-----------	----

### Working Papers.

<i>U. D'Ambrosio</i>	Mathematics and the Developing Countries – Some Basic Issues . . . . .	78
<i>B. Booss</i>	Some Ideas on the Launching of a Debate Journal on "Mathematics and the Real World" . . . . .	80

<i>J. Buurman, U. Knauer</i>	Some Aspects of the Relation between Mathematics and Reality . . . . .	82
<i>J. Casti</i>	Mathematical Trends in System-Theoretic Research . . . . .	86
<i>P. Crépel</i>	Discussion sur "Les Mathématiques et Le Monde Réel" . . . . .	88
<i>G.F.D. Duff</i>	The Art of Teaching the Business of Modelling in Applied Mathematical Sciences . . . . .	92
<i>H. Duparc</i>	Educational Aspects of Pure and Applied Mathematics . . . . .	95
<i>A. G. Howson</i>	Mathematics and the Real World – some Consequences for Teacher Training . . . . .	97
<i>M. E. Larsen</i>	Aspects of Complementarity in the Application of Mathematics . . . . .	101
<i>R. Narasimhan</i>	Mathematics and the Study of Complex, Information-Processing Behaviour . . . . .	102
<i>T. Poston</i>	Structure and Application . . . . .	105
<i>G.S. Ramaswamy</i>	The Role of Mathematics in the Engineering Sciences: Present Status and Future Possibilities . . . . .	107
<i>M. El Tom</i>	On Future Mathematics in Underdeveloped Countries . . . . .	112
<b>Appendices.</b>		
1. Bibliography		
<i>E. Høyrup</i>	Books about Mathematics: History, Philosophy, Society, Psychology, Teaching, Models, Systems etc. . . . .	116
2. List of participants . . . . .		132
