Table of Contents

Editorial Introduction v

D. Alpay, L. Rakowski
Coisometrically valued rational matrix functions 1
1. Introduction 1
2. Functions with coisometric values on the line 4
3. Functions with coisometric values on the circle 9
4. Inner functions 16
References 19

D.Z. Arov, B. Fritzsche, B. Kirstein
On some aspects of V.E. Katsnelson's investigations on interrelations between left and right Blaschke-Potapov products 21
Introduction 21
1. Some notation and preliminaries 21
2. On J-inner functions and their factorizations 24
3. On j_{pq}-inner functions and generalized bitangential Schur-Nevanlinna-Pick interpolation 29
4. On V.E. Katsnelson's refinement of the factorization theory of J-inner functions 33
5. An inverse problem for A-singular j_{pq}-inner functions 35
References 39

T.Ya. Azizov, L.I. Sukhocheva
On some development of the S. Krein pencil theory 42
References 47

A. Ben-Artzi, I. Gohberg, M.A. Kaashoek
Discrete nonstationary bounded real lemma in indefinite metrics, the strict contractive case 49
1. Introduction 49
2. Preliminaries 52
3. Strict (J, J') contractions: necessary conditions for a special case 58
4. Strict (J, J') contractions: necessary conditions in the general case 71
5. The main results 75
References 77

P. Binding, B. Najman
Regularity of finite type critical points for self-adjoint operators in Krein space 79
1. Introduction and notation 79
2. Preliminary results 81
3. Regularity tests 82
4. ECR chains 85
5. General Krein spaces 86
References 89

B. Curgus, B. Najman
Quasi-uniformly positive operators in Krein space 90
1. Quasi-uniformly positive operators 91
2. Quasi-uniformly positive forms 95
3. Klein-Gordon equation 97
References 99

G. Derfel
Functional-differential and functional equations with rescaling 100
1. Introduction 100
2. Asymptotic behavior of the solutions 101
3. Compactly supported solutions. Wavelets and subdivision processes 102
4. Spectral methods in the theory of functional-differential equations, applications to quasi-crystals and localization theory 103
5. Probabilistic methods in functional-differential equations theory 105
6. Invariant measures and chaos 106
Bibliography 107

A. Dijksma, A. Gheondea
On the signatures of selfadjoint pencils 112
1. Introduction 112
2. The signatures of selfadjoint operators in Krein spaces 114
3. The Krein space environment 117
4. The Pontryagin space case 123
5. Applications to selfadjoint pencils 129
References 135

M. Faierman
On the spectral theory of an elliptic boundary value problem involving an indefinite weight 137
1. Introduction 137
2. Preliminaries 138
3. Main results 141
4. Some technical results 143
5. Proof of theorem 3.4 148
References 152

C. Foias, C. Gu, A. Tannenbaum
Nonlinearity in H^∞-control theory, causality in the commutant lifting theorem, and extension of intertwining operators 155
0. Introduction 155
1. Systems 156
3. The linear optimization problem and the commutant lifting theorem 159
4. The nonlinear optimization problem and the iterative commutant lifting procedure 161
5. The causal LOP and the causal CLT 162
6. CLOP and CLT 164
7. Conclusion 165
References 166

J. Hu, W.-C. Cheng
Analysis of the radiation loss: asymptotics beyond all orders 168
1. Introduction 168
2. Asymptotic formulas 169
3. Radiation loss problems 171
References 175

P. Jonas, H. Langer
Selfadjoint extensions of a closed linear relation of defect one in a Krein space 176
1. Selfadjoint closed linear relations with a finite number of negative squares . . 177
2. Nonnegative closed linear relations of defect one 179
3. Nonnegative closed linear relations of regular defect one 182
4. Nonnegative closed linear relations with a nonreal eigenvalue 185
5. The nonreal spectrum of the selfadjoint extensions 189
6. Selfadjoint extensions with an empty resolvent set 190
7. The resolvents of the selfadjoint extensions 193
8. The nonnegative selfadjoint extensions 197
References 203

M. Martin, N. Salinas
Differential geometry of generalized Grassmann manifolds in C^*-algebras 206
1. Environments and their Grassmannians 208
2. Topological properties 218
3. The standard lift 221
4. Differentiable structures 227
5. Invariant linear connections 231
6. Geodesics 236
References 241

L.A. Sakhnovich
Nonlinear equations and inverse spectral problems on the axis 244
1. On the Weyl-Titchmarsh matrix-function 244
2. Spectral data evolution 246
3. Investigation of the NSE and the MKdVE 250
References 254

S.A. Stepin
Rayleigh problem and Friedrichs model 256
1. Introduction 256
2. Operator-theoretic formulation of the problem (2)-(3): generalized eigenfunctions 257
3. Spectral analysis of the problem (2)-(3): Friedrichs' model approach and expansion theorem 258
4. Scattering problem for Friedrichs' model related to the Rayleigh equation . . 261
5. Solvability class for inverse scattering problem. Local existence and uniqueness theorem 262
References 265

F.H. Szafraniec
Yet another face of the creation operator 266
References 275

H. Winkler
On transformations of canonical systems 276
0. Introduction 276
1. Some transformation rules 277
2. Changes of the spectral density by rational factors 280
References 288

R.A. Zuidwijk
Complementary triangular forms for infinite matrices 289
1. Introduction 289
2. Lower-upper factorization 291
3. Hilbert space analogues 294
References 299
