

CONTENTS

| | |
|---|-----|
| Simulated data experiment to test a software reliability growth model based on exercise frequencies by A.W. Andrews and R.J. Cole | 1 |
| Towards verified systems: the SAFEMOS project by J.P. Bowen, H. Jifeng, R.W.S. Hale and J.M.J. Herbert | 23 |
| Formalising safety in decision support systems by S.K. Das | 49 |
| Formal techniques for requirements analysis for safety-critical systems by R. de Lemos, A. Saeed and T. Anderson | 63 |
| Proving authentication protocols - what do authentication protocols prove? by D. Gollmann | 95 |
| A Galois theory of local reasoning in control systems with compositionality by M. Ingleby | 103 |
| A formal framework for fault-tolerant programs by Z. Liu and M. Joseph | 131 |
| Composition and refinement of probabilistic real-time systems by Z. Liu, J. Nordahl and E.V. Sørensen | 149 |
| Fault prediction for software development processes by J. May, P. Hall, H. Zhu, T. Cockram, N. Bird and L. Winsborrow | 165 |
| Single Transferable Vote: a case study of the use of VDM-SL by P. Mukherjee and B.A. Wichmann | 183 |
| Mathematics of computation for (Software and other) Engineers by D.L. Parnas | 209 |
| Formal demonstration of equivalence of source code and PROM contents: an industrial example by D.J. Pavey and L.A. Winsborrow | 225 |
| Uses and misuses of formal methods in computer security by C.P. Pfleeger | 249 |

| | |
|---|-----|
| Logical methods in the formal verification of safety-critical software by C. Pulley and G.V. Conroy | 257 |
| Understanding software test adequacy - an axiomatic and measurement theory approach by H. Zhu, P.A.V. Hall and J.H.R. May | 275 |
