

CONTENTS

| | |
|--|-----|
| Foreword | v |
| Preface | vii |
| Impulsive control systems | 1 |
| <i>Alberto Bressan</i> | |
| Approximation of optimal control problems with state constraints: Estimates and applications | 23 |
| <i>Fabio Camilli and Maurizio Falcone</i> | |
| Discrete approximations in optimal control | 59 |
| <i>A.L. Dontchev</i> | |
| The maximum principle in optimal control of systems governed by semilinear equations | 81 |
| <i>Boris Ginsburg and Alexander Ioffe</i> | |
| On controlled invariance for a simple class of distributions with singularities | 111 |
| <i>Kevin A. Grasse</i> | |
| Dynamic feedback stabilization | 129 |
| <i>Henry Hermes</i> | |
| Introduction to a paper of M.Z. Shapiro: Homotopy theory in control | 139 |
| <i>Richard Montgomery</i> | |
| Optimization and finite difference approximations of nonconvex differential inclusions with free time | 153 |
| <i>Boris S. Mordukhovich</i> | |
| Small-time reachable sets and time-optimal feedback control | 203 |
| <i>Heinz Schättler</i> | |
| Higher order variations: How can they be defined in order to have good properties? | 227 |
| <i>Gianna Stefani</i> | |
| Well posed optimal control problems: A perturbation approach | 239 |
| <i>Tullio Zolezzi</i> | |
