

TABLE OF CONTENTS

W. ALT: Semi-local convergence of the Lagrange-Newton method with application to optimal control.	1
D. AZÉ - A. RAHMOUNI: Intrinsic bounds for Kuhn-Tucker points of perturbed convex programs.	17
M.P. BENDSØE - J. SOKOŁOWSKI: Shape sensitivity analysis of nonsmooth shape functionals.	36
J. BLOT: Infinite-horizon problems under holonomic constraints.	46
J. BORWEIN: A survey of examples of convex functions and classifications of normed spaces.	60
P. CARPENTIER - G. COHEN - J.-C. CULIOLI: Stochastic optimal control and decomposition-coordination methods. Part I: Theory.	72
P. CARPENTIER - G. COHEN - J.-C. CULIOLI: Stochastic optimal control and decomposition-coordination methods. Part II: Application.	88
C.C. CHOU: Approximation, inversion and implicit function theorems.	104
J.P. CROUZEIX: A survey on separability and generalized convexity or generalized monotonicity.	117
A.L. DONTCHEV - I. KOLMANOVSKY: On regularity of optimal control.	125
J. GAUVIN: Degeneracy, normality, stability in mathematical programming.	136
A. GÖPFERT - E.-C. HENKEL - Chr. TAMMER: A smooth variational principle for vector optimization problems.	142
A. GRIEWANK: Automatic directional differentiation of nonsmooth composite functions.	155
J. GWINNER: A Hilbert space approach to some flow problems.	170
M. HENN - P. JONKER - F. TWILT: On the critical sets of one-parameter quadratic optimization problems.	183
A. KAPLAN - R. TICHATSCHKE: On new proximal methods for elliptic variational inequalities (case of symmetric operators).	198

D. KLATTE: On quantitative stability for $C^{1,1}$ programs.	214
W. KRABS: Linear approximation under infinitely many linear constraints.	231
B. KUMMER: Approximation of multifunctions and superlinear convergence.	243
B. LEMAIRE: On the convergence of some iterative methods for convex minimization.	252
J.P. PENOT: Generalized convexity in the light of nonsmooth analysis.	269
T.Q. PHONG - P.D. TAO - L.T.H. AN: Fuel mixture nonconvex problem: Solution methods and numerical simulations.	291
G. SONNEVEND: Filtering and control under pointwise in time bounds by the use of central solutions.	306
T. STAIB: On an optimal control problem for chemical reactors.	325
L. THIBAUT: A generalized sequential formula for subdifferentials of sums of convex functions defined on Banach spaces.	340
S. TRAORE - M. VOLLE: Subdifferentiability, lower semicontinuity and exactness of the level sum of two convex functions on locally convex spaces	346
