Contents

Preface ix

Section I: Dynamical Systems and PDE's

An introduction to KAM theory
C. EUGENE WAYNE 3

KAM theory in infinite dimensions
WALTER CRAIG 31

Global center manifolds and singularly perturbed equations: A brief (and biased) guide to (some of) the literature
NANCY KOPELL 47

Melnikov analysis for PDE's
DAVID W. MCLAUGHLIN AND JALAL SHATAH 51

Section II: Exactly Integrable Systems

Integrable Hamiltonian systems
PERCY DEIFT 103

Section III: Amplitude Equations

The complex Ginzburg-Landau equation as a model problem
C. DAVID LEVERMORE AND MARCEL OLIVER 141

Derivation and justification of the complex Ginzburg-Landau equation as a modulation equation
ALEXANDER MIELKE AND GUIDO SCHNEIDER 191

Section IV: Fluid Mechanics and Turbulence

Navier-Stokes equations and incompressible fluid turbulence
PETER CONSTANTIN 219

Turbulence as a near-equilibrium process
ALEXANDRE J. CHORIN 235

Homogenization and renormalization: The mathematics of multi-scale random media and turbulent diffusion
MARCO AVELLANEDA 241
