

Contents

Hardware and Floating Point Operations

<i>Hardware Reciprocal Table Compression/Decompression Techniques</i>	11
D. Das Sarma and D. W. Matula	
<i>Implementing Division and Other Floating-Point Operations: A System Perspective</i>	18
S. F. Oberman and M. J. Flynn	
<i>A Processor for Accurate, Self-Validating Computing</i>	25
M. J. Schulte and E. E. Swartzlander, Jr.	
<i>Hardware Support for Interval Arithmetic</i>	32
J. Wolff von Gudenberg	

Function Evaluation

<i>Shared Computations for Efficient Interval Function Evaluation</i>	38
E. Hyvönen and S. De Pascale	
<i>Computing Narrow Inclusions for Cauchy Principal Value Integrals</i>	45
W. Krämer and S. Wedner	
<i>The Complex Arithmetic-Geometric Mean and Multiple-Precision Matrix Functions</i>	52
W. Luther and W. Otten	
<i>Towards Exact Rounding of the Elementary Functions</i>	59
J.-M. Muller and A. Tisserand	
<i>Calculation of the Inverse Weierstraß Function in an Arbitrary Machine Arithmetic</i>	72
K. Werner	

Software

<i>Processing Software Metrics in an Integrated Development Environment for Pascal-XSC</i>	79
H. M. E. Berlejung	
<i>Computational Stability Study Using the CADNA Software Applied to the Navier-Stokes Solver PEGASE</i>	84
J.-M. Chesneaux and B. Troff	
<i>The Use of Multi-Intervals in the UniCalc Solver</i>	91
D. Petunin and A. Semenov	

Linear Algebra

<i>Success in Epsilon-Inflation</i>	98
G. Mayer	
<i>The Distance Between Regularity and Strong Regularity</i>	105
S. M. Rump	
<i>A New Approach to the Analysis of Static Systems Under Interval Uncertainty</i>	118
S. P. Shary	

Nonlinear Equations

<i>Effective Improvements of the Interval-Newton-Method</i>	133
G. E. Alefeld, F. A. Potra and W. Völker	
<i>On the Application of an Interval Algorithm for Set Inversion</i>	140
M. Candev	
<i>On a Numerical Approach for Solving a Class of Nonlinear Systems</i>	147
N. S. Dimitrova	
<i>On the R-Order of Convergence of a Class of Simultaneous Methods for the Inclusion of Polynomial Roots</i>	154
J. Herzberger	
<i>Treating Non-Smooth Functions as Smooth Functions in Global Optimization and Nonlinear Systems Solvers</i>	160
R. B. Kearfott	
<i>Optimal Preconditioners for Interval Gauss-Seidel Methods</i>	173
R. B. Kearfott and X. Shi	

<i>Inclusion of the Inverse of a Function in n Variables</i>	179
M. Koeber	
<i>A Generalized Bisection Method for Large and Imprecise Problems</i>	186
M. N. Vrahatis	
<i>A Parallel Algorithm for Enclosing All Zeros of a Nonlinear System of Equations</i>	193
A. Wiethoff	

Optimization

<i>A Parallel Method for Verified Global Optimization</i>	200
S. Berner	
<i>A Method for Verified Computing of Inner and Outer Approximations of the Interval Hull of a Tolerance Polyhedron</i>	207
G. Heindl	
<i>The Exact Lower Bound of Optimal Values in Interval LP</i>	214
F. Mráz	
<i>On Branching Rules in Second-Order Branch-and-Bound Methods for Global Optimization</i>	221
D. Ratz	

Differential Equations

<i>Validating an A Priori Enclosure Using High-Order Taylor Series</i>	228
G. F. Corliss and R. Rihm	
<i>A Posteriori Error Estimation for Partial Differential Equations</i>	239
B. S. Dobronets	
<i>Inheritable Properties and Computer Assisted Proofs in Dynamics</i>	245
M. Mrozek	
<i>Guaranteed Error Bounds for Finite Element Solutions of the Stokes Problem</i>	258
M. T. Nakao, N. Yamamoto and Y. Watanabe	
<i>Enclosures for Two-Point Boundary Value Problems Near Bifurcation Points</i>	265
M. Plum	

<i>Globally Convergent Iterative Domain Decomposition Methods for the Parallel Solution of a Class of Nonlinear Systems of Equations</i>	280
H. Schwandt	
<i>Rigorous Verification of Chaos in the Rössler Equations</i>	287
P. Zgliczyński	

Complexity and Theory of Interval Problems

<i>Computational Complexity of Interval Algebraic Problems: Some Are Feasible and Some Are Computationally Intractable—A Survey</i>	293
V. Kreinovich, A. Lakeyev and J. Rohn	
<i>On the Foundations of Interval Arithmetic</i>	307
S. M. Markov	
<i>On Interval Problems, Interval Algorithms and Their Computational Complexity</i>	314
Yu. I. Shokin	

Applications in Engineering

<i>Application of Automatic Differentiation Techniques to Circuit Simulation</i> ...	329
H.-J. Dobner and W. Klein	
<i>Liquid Crystal Simulation Using Automatic Differentiation and Interval Arithmetic</i>	334
A. Nonnenmacher and D. A. Mlynski
