

## Table of Contents

Editorial Introduction . . . . .	viii
----------------------------------	------

*D. Alpay, I. Gohberg*

<b>Inverse scattering problem for differential operators with rational scattering matrix functions . . . . .</b>	<b>1</b>
1. Introduction . . . . .	1
2. Rational matrix valued functions . . . . .	4
3. Minimal realizations of rational scattering functions . . . . .	6
4. Marchenko's equation in the rational case . . . . .	8
5. Formula for the potential . . . . .	11
6. Equivalence with Krein's approach . . . . .	12
7. A result on asymptotic expansions . . . . .	14
8. Reconstructing the potential . . . . .	16
References . . . . .	17

*A. Böttcher, I. Gohberg, Yu. Karlovich, N. Krupnik, S. Roch,*

*B. Silbermann, I. Spitkovsky*

<b>Banach algebras generated by <math>N</math> idempotents and applications . . . . .</b>	<b>19</b>
Preface and acknowledgement . . . . .	19
1. Introduction . . . . .	19
2. Algebras generated by two idempotents . . . . .	21
3. Algebras generated by three idempotents . . . . .	22
4. An $N$ projections theorem . . . . .	25
5. Examples . . . . .	39
6. Miscellanea . . . . .	45
References . . . . .	51

*A. Böttcher, S.M. Grudsky*

<b>Toeplitz operators with discontinuous symbols: Phenomena beyond piecewise continuity . . . . .</b>	<b>55</b>
1. Introduction . . . . .	55
2. Preliminaries . . . . .	57
3. Periodic and $u$ -periodic symbols . . . . .	66
4. Orientation preserving whirls . . . . .	70
5. Concrete orientation preserving whirls . . . . .	83
6. Orientation changing whirls . . . . .	102

7. Undecided symbols with bounded arguments . . . . .	104
8. Modulated almost periodic symbols . . . . .	112
References . . . . .	116

*A. Böttcher, Yu.I. Karlovich*

### **Toeplitz and singular integral operators on general Carleson**

<b>Jordan curves</b> . . . . .	119
1. Introduction . . . . .	119
2. The first three metamorphoses . . . . .	122
3. Main result . . . . .	125
4. Examples . . . . .	127
5. Plan of the proof of the main theorem . . . . .	132
6. Submultiplicative functions . . . . .	133
7. Description of the set $N_t$ . . . . .	138
8. Description of the set $\Phi_t$ . . . . .	145
9. Spectra and essential spectra of Toeplitz operators . . . . .	148
10. The algebra of singular integral operators . . . . .	149
References . . . . .	150

*M.R. Capobianco, P. Junghanns, U. Luther, G. Mastroianni*

### **Weighted uniform convergence of the quadrature method for**

<b>Cauchy singular integral equations</b> . . . . .	153
1. Introduction . . . . .	153
2. Notations and preliminary results . . . . .	154
3. The quadrature method . . . . .	160
4. Special interpolation processes . . . . .	167
5. Numerical examples . . . . .	178
References . . . . .	180

*T. Ehrhardt, S. Roch, B. Silbermann*

### **Symbol calculus for singular integrals with operator-valued**

<b>PQC-coefficients</b> . . . . .	182
1. Introduction . . . . .	182
2. Operator-valued quasicontinuous functions . . . . .	183
3. Symbol calculus . . . . .	195
References . . . . .	202

*T. Ehrhardt, S. Roch, B. Silbermann*

### **Finite section method for singular integrals with**

<b>operator-valued PQC-coefficients</b> . . . . .	204
1. Introduction . . . . .	204
2. Preliminaries . . . . .	205
3. A generalization of compactness and of strong convergence . . . . .	208
4. Algebraization of stability and lifting theorem . . . . .	211
5. The algebras $\mathcal{S}(PQC_{\mathcal{L}(H)})$ and $\mathcal{F}(PQC_{\mathcal{L}(H)})$ . . . . .	213
6. Localization . . . . .	216
7. Identification of local algebras . . . . .	220

8. The algebras $\Sigma$ and $\Xi$ . . . . .	225
9. Identification of local algebras continued . . . . .	230
10. Final result . . . . .	240
References . . . . .	242
<i>R.L. Ellis, I. Gohberg</i>	
<b>Distribution of zeros of orthogonal functions related to the Nehari problem</b> . . . . .	244
1. Introduction . . . . .	244
2. Auxilliary theorems . . . . .	247
3. Proof of the main theorem . . . . .	255
References . . . . .	262
<i>Yu.I. Karlovich, I.M. Spitkovsky</i>	
<b>Semi-Fredholm properties of certain singular integral operators</b> . . . . .	264
1. Introduction . . . . .	264
2. Operators with almost periodic symbols . . . . .	266
3. Operators with semi almost periodic symbols . . . . .	279
References . . . . .	286
<i>I. Krupnik, N. Krupnik, V. Matsaev</i>	
<b>On canonical factorization of dissipative and positive matrix functions relative to non-simple contours</b> . . . . .	288
References . . . . .	294
<i>B. Silbermann</i>	
<b>Asymptotic invertibility of Toeplitz operators</b> . . . . .	295
1. Introduction . . . . .	295
2. Operators . . . . .	296
3. Finite sections and algebras . . . . .	297
4. Symbols . . . . .	299
5. Pseudospectra . . . . .	300
6. Asymptotic Moore-Penrose invertibility . . . . .	301
References . . . . .	302
<i>Y. Spiegel</i>	
<b>Calculation of the norm of polynomials of two adjoint projections</b> . . . . .	304
0. Introduction . . . . .	304
1. Some necessary results . . . . .	305
2. The main results . . . . .	306
3. Additional remarks and examples . . . . .	310
References . . . . .	312
<b>Toeplitz Lectures 1995</b> . . . . .	314
<b>Lectures of the Joint German-Israeli Workshop</b> . . . . .	314
