Preface	xi
Panel discussion: Does numerical analysis need a model of computation? MICHAEL SHUB	1
On numerical solving of nonlinear Polaron equations PAVEL G. AKISHIN, IGOR V. PUZYNIN, AND YURI S. SMIRNOV	19
Symmetry reductions for the numerical solution of boundary value problems EUGENE L. ALLGOWER AND PHILIP J. ASTON	29
The combinatorics of real algebraic splines over a simplicial complex CHANDRAJIT L. BAJAJ	49
QMR and TFQMR methods for sparse nonsymmetric problems on massively parallel systems ACHIM BASERMANN	59
On multigrid techniques for thin plate spline interpolation in two dimensions R. K. BEATSON, G. GOODSSELL, AND M. J. D. POWELL	77
Sparse matrix reordering schemes for browsing hypertext MICHAEL W. BERRY, BRUCE HENDRICKSON, AND PADMA RAGHAVAN	99
Algebraic settings for the problem “ $P \neq NP$?” LENORE BLUM, FELIPE CUCKER, MIKE SHUB, AND STEVE SMALE	125
A new algorithm for computing the spectral matrix for higher-order differen- tial equations and the location of discrete eigenvalues B. M. BROWN, M. S. P. EASTHAM, AND D. K. R. MCCORMACK	145
An asymptotically optimal non-adaptive algorithm for minimization of Brownian motion JAMES M. CALVIN	157
On two iterative methods for approximating the roots of a polynomial JEAN-PAUL CARDINAL	165
Algebraic approach of residues and applications J. P. CARDINAL AND B. MOURRAIN	189

Nash trees and Nash complexity FELIPE CUCKER AND THOMAS LICKTEIG	211
Operator equations, multiscale concepts and complexity WOLFGANG DAHMEN, ANGELA KUNOTH, AND REINHOLD SCHNEIDER	225
Approximate solutions of numerical problems, condition number analysis and condition number theorem JEAN-PIERRE DEDIEU	263
Computing the distance from a point to an algebraic hypersurface J. P. DEDIEU, X. GOURDON, AND J. C. YAKOUBSOHN	285
Local analysis of a Newton-type method based on partial linearization A. L. DONTCHEV	295
Approximations and complexity for computing algebraic curves B. CURTIS EAVES AND URIEL G. ROTHBLUM	307
Numerical univariate polynomial GCD IOANNIS Z. EMIRIS, ANDRE GALLIGO, AND HENRI LOMBARDI	323
A parallel preconditioned GMRES algorithm for sparse matrices J. ERHEL	345
An optimal algorithm for the local solution of integral equations KARIN FRANK	357
Descriptive complexity theory over the real numbers ERICH GRÄDEL AND KLAUS MEER	381
Complexity theory of Monte Carlo algorithms S. HEINRICH	405
Qualitative numerical analysis of ordinary differential equations ARIEH ISERLES AND ANTONELLA ZANNA	421
Tapia indicators and finite termination of infeasible-interior-point methods for degenerate LCP JUN JI AND FLORIAN A. POTRA	443
Quasi-Monte Carlo methods in computer graphics: The global illumination problem ALEXANDER KELLER	455
Numerical algorithms with automatic result verification ULRICH KULISCH	471
Random product homotopy with minimal BKK bound T. Y. LI, TIANJUN WANG, AND XIAOSHEN WANG	503

Computational complexity over the 2-adic numbers MICHAEL MALLER AND JENNIFER WHITEHEAD	513
Optimal reconstruction of stochastic evolutions PETER MATHÉ	523
Lagrangian globalization: Solving nonlinear equations via constrained optimization J. L. NAZARETH	533
Polynomial time methods in convex programming ARKADI NEMIROVSKI	543
Effective parallel computations with Toeplitz and Toeplitz-like matrices filled with integers VICTOR Y. PAN	591
An efficient discretization for solving ill-posed problems S. V. PEREVERZEV AND S. G. SOLODKY	643
Survey of computational complexity with noisy information LESZEK PLASKOTA	651
Lazy analysis and elementary numbers DANIEL RICHARDSON	665
On the average case complexity of solving Poisson equations KLAUS RITTER AND GRZEGORZ W. WASILKOWSKI	677
On the average number of real roots of certain random sparse polynomial systems J. MAURICE ROJAS	689
Computations in real algebraic geometry MARIE-FRANÇOISE ROY	701
Path following for large nonlinear equations by implicit block elimination based on recursive projections HUBERT SCHWETLICK, GISELA TIMMERMANN, AND RALF LOSCHE	715
Computability with neural networks HAVA T. SIEGELMANN	733
Numerical algebraic geometry ANDREW J. SOMMESE AND CHARLES W. WAMPLER	749
Wavelets from filter banks GILBERT STRANG	765
A pragmatic overview of fast multipole methods JAMES H. STRICKLAND AND ROY S. BATY	807

Topological complexity of root-finding algorithms VICTOR A. VASSILIEV	831
On the relationship between layered least squares and affine scaling steps STEPHEN A. VAVASIS AND YINYU YE	857
Enclosure methods for capricious solutions of ordinary differential equations WOLFGANG WALTER	867
QR-like algorithms—An overview of convergence theory and practice DAVID S. WATKINS	879
The complexity of the Poisson problem for spaces of bounded mixed derivatives ARTHUR G. WERSCHULZ	895
Overview of information-based complexity HENRYK WOZNAKOWSKI	915
