

CONTENTS

Introduction	xi
--------------------	----

CHAPTER I Operator functions in Banach spaces

1.1. Banach spaces	2
1.2. Holomorphic vector valued functions	6
1.3. The inverse of a Fredholm operator valued function	9
1.4. Root functions of holomorphic operator functions	13
1.5. Representation of the principal part of a finitely meromorphic operator function	18
1.6. Eigenvectors and associated vectors	27
1.7. Semi-simple eigenvalues	31
1.8. Local factorizations	33
1.9. The completion of biorthogonal systems of root functions	37
1.10. The operator function $A + \lambda B$	41
1.11. Abstract boundary eigenvalue operator functions	46
1.12. Notes	50

CHAPTER II First order systems of ordinary differential equations

2.1. Sobolev spaces on intervals	53
2.2. The dual of $W_p^k(a, b)$ for $p < \infty$	59
2.3. Multiplication in Sobolev spaces on the interval (a, b)	65
2.4. Compact inclusion maps in Sobolev spaces on (a, b)	67
2.5. Fundamental matrices	69
2.6. Regularity of solutions of differential equations	74
2.7. Estimates of integrals with a complex parameter	76
2.8. Asymptotic matrices	81
2.9. Notes	99

CHAPTER III Boundary eigenvalue problems for first order systems

3.1. The boundary eigenvalue problem	102
3.2. The inhomogeneous boundary eigenvalue problem	105
3.3. The adjoint boundary eigenvalue problem	108
3.4. The adjoint boundary eigenvalue problem in parametrized form	110
3.5. Two-point boundary eigenvalue problems in $(L_p(a, b))^n$	119
3.6. Notes	126

CHAPTER IV Birkhoff regular and Stone regular boundary eigenvalue problems

4.1. Definitions and basic results	130
4.2. Examples of Birkhoff regular problems	139
4.3. Estimates of the characteristic determinant	148
4.4. Estimates of the Green's matrix	160
4.5. A special case of the Hilbert transform	171
4.6. Improved estimates of the Green's matrix	181
4.7. Uniform estimates of the Green's matrix	189
4.8. Notes	201

CHAPTER V Expansion theorems for regular boundary eigenvalue problems for first order systems

5.1. First order systems which are linear in the eigenvalue parameter	204
5.2. Birkhoff regular first order systems	206
5.3. Expansion theorems for Birkhoff regular problems	211
5.4. Examples for expansions in eigenfunctions and associated functions	214
5.5. Stone regular boundary eigenvalue problems	221
5.6. Expansion theorems for Stone regular problems	232
5.7. Improved expansion theorems for Stone regular problems	241
5.8. Notes	247

CHAPTER VI n -th order differential equations

6.1. Differential equations and systems	250
6.2. Boundary conditions	255
6.3. The boundary eigenvalue operator function	257
6.4. The inverse of the boundary eigenvalue operator function	260
6.5. The adjoint of the boundary eigenvalue problem	262
6.6. The adjoint boundary eigenvalue problem in parametrized form	263
6.7. Two-point boundary eigenvalue problems in $L_p(a, b)$	271
6.8. Notes	278

CHAPTER VII Regular boundary eigenvalue problems for n -th order equations

7.1. General assumptions	280
7.2. Asymptotic linearizations	283
7.3. Birkhoff regular problems	295
7.4. Expansion theorems for Birkhoff regular n -th order differential equations	297

7.5. An example for a Birkhoff regular problem with λ -dependent boundary conditions.....	300
7.6. Stone regular problems	301
7.7. Boundary eigenvalue problems for $\eta'' + p_1\eta' + p_0\eta = \lambda^2\eta$	310
7.8. The Regge problem	316
7.9. Almost Birkhoff regular problems	318
7.10. Notes	319

CHAPTER VIII The differential equation $\mathbf{K}\eta = \lambda \mathbf{H}\eta$

8.1. The eigenvalue problem and general assumptions.....	322
8.2. An asymptotic fundamental system for $\mathbf{K}\eta = \lambda^l \mathbf{H}\eta$	326
8.3. The asymptotic fundamental system in the general case	340
8.4. The inverse of the asymptotic fundamental matrix	344
8.5. Almost Birkhoff regular boundary eigenvalue problems	351
8.6. Estimates of the characteristic determinant	357
8.7. Asymptotic estimates of the Green's function	361
8.8. Expansion theorems	373
8.9. The differential equation $\eta^{(4)} - \alpha\eta''' = \lambda\eta''$	376
8.10. The differential equation $\eta^{(4)} + K\eta = \lambda \mathbf{H}\eta$	377
8.11. A boundary eigenvalue problem with associated functions at each eigenvalue	381
8.12. Notes	387

CHAPTER IX n -th order differential equations and n -fold expansions

9.1. Shkalikov's linearization.....	389
9.2. A first convergence result	397
9.3. The expansion theorem	404
9.4. Notes	408

CHAPTER X Applications

10.1. The clamped-free elastic bar.....	409
10.2. Control of beams	411
10.3. Control of one beam	412
10.4. Control of multiple beams.....	413
10.5. An example from meteorology	417
10.6. The Orr-Sommerfeld equation	428
10.7. A system of differential equations in the theory of viscous fluids	429
10.8. Heat-conducting viscous fluid	429
10.9. Motions of an incompressible magnetized plasma.....	436

APPENDIX A Exponential sums

A.1. The convex hull of sums of complex numbers	441
A.2. Estimates of exponential sums	450
A.3. Improved estimates for exponential sums	473
Bibliography	475
Notations	497
Index	499
