<i>Notation</i>	xvi
<i>Introduction</i>	xix

## **Part I Foundations**

Chapter 1	An introduction to natural resource and environmental economics	3
	Learning objectives	3
	Introduction	3
1.1	Three themes	3
1.2	The emergence of resource and environmental economics	4
1.3	Fundamental issues in the economic approach to resource and environmental issues	10
1.4	Reader's guide	12
	Summary	14
	Further reading	15
Chapter 2	The origins of the sustainability problem	16
	Learning objectives	16
	Introduction	16
2.1	Economy–environment interdependence	17
2.2	The drivers of environmental impact	28
2.3	Poverty and inequality	41
2.4	Limits to growth?	44
2.5	The pursuit of sustainable development	48
	Summary	52
	Further reading	52
	Discussion questions	54
	Problems	54
Chapter 3	Ethics, economics and the environment	56
	Learning objectives	56
	Introduction	56

3.1	Naturalist moral philosophies	57
3.2	Libertarian moral philosophy	58
3.3	Utilitarianism	59
3.4	Criticisms of utilitarianism	64
3.5	Intertemporal distribution	67
	Summary	75
	Further reading	75
	Discussion questions	76
	Problems	77
	Appendix 3.1 The Lagrange multiplier method of solving constrained optimisation problems	77
	Appendix 3.2 Social welfare maximisation	80
Chapter 4	Concepts of sustainability	82
	Learning objectives	82
	Introduction	82
4.1	Concepts and constraints	83
4.2	Economists on sustainability	86
4.3	Ecologists on sustainability	92
4.4	The institutional conception	96
4.5	Sustainability and policy	97
	Summary	103
	Further reading	103
	Discussion questions	104
	Problems	104
Chapter 5	Welfare economics and the environment	105
	Learning objectives	105
	Introduction	105
Part I	Efficiency and optimality	105
5.1	Economic efficiency	107
5.2	An efficient allocation of resources is not unique	109
5.3	The social welfare function and optimality	112
5.4	Compensation tests	113
Part II	Allocation in a market economy	116
5.5	Efficiency given ideal conditions	116
5.6	Partial equilibrium analysis of market efficiency	119
5.7	Market allocations are not necessarily equitable	122
Part III	Market failure, public policy and the environment	124
5.8	The existence of markets for environmental services	124
5.9	Public goods	126
5.10	Externalities	134
5.11	The second-best problem	142
5.12	Imperfect information	143
5.13	Government failure	144
	Summary	145
	Further reading	146
	Discussion questions	146
	Problems	146
	Appendix 5.1 Conditions for efficiency and optimality	147

	Appendix 5.2 Market outcomes	152
	Appendix 5.3 Market failure	153
<b>Part II Environmental pollution</b>		
Chapter 6	Pollution control: targets	165
	Learning objectives	165
	Introduction	165
6.1	Modelling pollution mechanisms	167
6.2	Pollution flows, pollution stocks, and pollution damage	169
6.3	The efficient level of pollution	170
6.4	A static model of efficient flow pollution	171
6.5	Modified efficiency targets	174
6.6	Efficient levels of emissions of stock pollutants	177
6.7	Pollution control where damages depend on location of the emissions	177
6.8	Ambient pollution standards	179
6.9	Intertemporal analysis of stock pollution	181
6.10	Variable decay	186
6.11	Convexity and non-convexity in damage and abatement cost functions	187
6.12	Estimating the costs of abating pollution	189
6.13	Choosing pollution targets on grounds other than economic efficiency	193
	Summary	194
	Further reading	195
	Discussion questions	196
	Problems	196
	Appendix 6.1 Matrix algebra	196
	Appendix 6.2 Spatially differentiated stock pollution: a numerical example	201
Chapter 7	Pollution control: instruments	202
	Learning objectives	202
	Introduction	202
7.1	Criteria for choice of pollution control instruments	203
7.2	Cost efficiency and cost-effective pollution abatement instruments	204
7.3	Instruments for achieving pollution abatement targets	206
7.4	Economic incentive (quasi-market) instruments	217
7.5	Pollution control where damages depend on location of the emissions	228
7.6	A comparison of the relative advantages of command and control, emissions tax, emission abatement subsidy and marketable permit instruments	234
	Summary	238
	Further reading	239
	Discussion questions	240

	Problems	241
	Appendix 7.1 The least-cost theorem and pollution control instruments	242
Chapter 8	Pollution policy with imperfect information	247
	Learning objectives	247
	Introduction	247
8.1	Difficulties in identifying pollution targets in the context of limited information and uncertainty	248
8.2	Sustainability-based approaches to target setting and the precautionary principle	249
8.3	The relative merits of pollution control instruments under conditions of uncertainty	251
8.4	Transactions costs and environmental regulation	261
	Summary	266
	Further reading	267
	Discussion question	268
	Problems	268
Chapter 9	Economy-wide modelling	269
	Learning objectives	269
	Introduction	269
9.1	Input–output analysis	270
9.2	Environmental input–output analysis	274
9.3	Costs and prices	278
9.4	Computable general equilibrium models	281
	Summary	290
	Further reading	290
	Discussion questions	290
	Problems	291
	Appendix 9.1 A general framework for environmental input–output analysis	291
	Appendix 9.2 The algebra of the two-sector CGE model	295
Chapter 10	International environmental problems	297
	Learning objectives	297
	Introduction	297
10.1	International environmental cooperation	298
10.2	Game theory analysis	299
10.3	Factors contributing to enhancing probability of international agreements or achieving a higher degree of cooperation	311
10.4	International treaties: conclusions	312
10.5	Acid rain pollution	312
10.6	Stratospheric ozone depletion	319
10.7	The greenhouse effect	321
10.8	International trade and the environment	339
	Learning outcomes	342
	Further reading	343
	Discussion questions	345

	Problems	346
	Appendix 10.1 Some algebra of international treaties	346
<b>Part III Project appraisal</b>		
Chapter 11	Cost–benefit analysis	351
	Learning objectives	351
	Introduction	351
11.1	Intertemporal welfare economics	352
11.2	Project appraisal	362
11.3	Cost–benefit analysis and the environment	373
	Summary	385
	Further reading	386
	Discussion questions	387
	Problems	387
	Appendix 11.1 Conditions for intertemporal efficiency and optimality	388
	Appendix 11.2 Markets and intertemporal allocation	395
Chapter 12	Valuing the environment	399
	Learning objectives	399
	Introduction	399
12.1	Dimensions of value	400
12.2	The theory of environmental valuation	403
12.3	Environmental valuation techniques	411
12.4	The travel cost method	411
12.5	Contingent valuation	420
12.6	Other techniques	435
	Summary	440
	Further reading	440
	Discussion questions	441
	Problems	441
	Appendix 12.1 Demand theory and environmental evaluation	442
Chapter 13	Irreversibility, risk and uncertainty	444
	Learning objectives	444
	Introduction	444
13.1	Individual decision making in the face of risk	445
13.2	Option price and option value	448
13.3	Risk and irreversibility	451
13.4	Environmental cost–benefit analysis revisited	457
13.5	Decision theory: choices under uncertainty	459
13.6	A safe minimum standard of conservation	461
	Summary	464
	Further reading	465
	Discussion questions	466
	Problems	466

Appendix 13.1 Irreversibility and development: future known	467
Appendix 13.2 Irreversibility, development and risk	468

#### **Part IV Natural resource exploitation**

Chapter 14	The efficient and optimal use of natural resources	473
	Learning objectives	473
	Introduction	473
Part I	A simple optimal resource depletion model	474
14.1	The economy and its production function	474
14.2	Is the natural resource essential?	474
14.3	What is the elasticity of substitution between $K$ and $R$ ?	475
14.4	Resource substitutability and the consequences of increasing resource scarcity	476
14.5	The social welfare function and an optimal allocation of natural resources	480
Part II	Extending the model to incorporate extraction costs and renewable resources	486
14.6	The optimal solution to the resource depletion model incorporating extraction costs	487
14.7	Generalisation to renewable resources	489
14.8	Complications	490
14.9	A numerical application: oil extraction and global optimal consumption	491
	Summary	495
	Further reading	495
	Discussion questions	496
	Problems	496
	Appendix 14.1 The optimal control problem and its solution using the maximum principle	496
	Appendix 14.2 The optimal solution to the simple exhaustible resource depletion problem	503
	Appendix 14.3 Optimal and efficient extraction or harvesting of a renewable or non-renewable resource in the presence of resource extraction costs	504
Chapter 15	The theory of optimal resource extraction: non-renewable resources	506
	Learning objectives	506
	Introduction	506
15.1	A non-renewable resource two-period model	510
15.2	A non-renewable resource multi-period model	512
15.3	Non-renewable resource extraction in perfectly competitive markets	517
15.4	Resource extraction in a monopolistic market	518
15.5	A comparison of competitive and monopolistic extraction programmes	518

15.6	Extensions of the multi-period model of non-renewable resource depletion	520
15.7	The introduction of taxation/subsidies	525
15.8	The resource depletion model: some extensions and further issues	526
15.9	Do resource prices actually follow the Hotelling rule?	527
15.10	Natural resource scarcity	529
	Summary	532
	Further reading	533
	Discussion questions	533
	Problems	533
	Appendix 15.1 Solution of the multi-period resource depletion model	534
	Appendix 15.2 The monopolist's profit-maximising extraction programme	535
	Appendix 15.3 A worked numerical example	536
Chapter 16	Stock pollution problems	537
	Learning objectives	537
	Introduction	537
16.1	An aggregate dynamic model of pollution	538
16.2	A complication: variable decay of the pollution stock	544
16.3	Steady-state outcomes	544
16.4	A model of waste accumulation and disposal	548
	Summary	553
	Further reading	554
	Discussion question	554
	Problem	554
Chapter 17	Renewable resources	555
	Learning objectives	555
	Introduction	555
17.1	Biological growth processes	557
17.2	Steady-state harvests	560
17.3	An open-access fishery	561
17.4	The dynamics of renewable resource harvesting	566
17.5	Some more reflections on open-access fisheries	569
17.6	The private-property fishery	570
17.7	Dynamics in the PV-maximising fishery	578
17.8	Bringing things together: the open-access fishery, static private-property fishery and PV-maximising fishery models compared	579
17.9	Socially efficient resource harvesting	580
17.10	A safe minimum standard of conservation	582
17.11	Resource harvesting, population collapses and the extinction of species	584
17.12	Renewable resources policy	586
	Summary	592
	Further reading	593
	Discussion questions	595
	Problems	595

	Appendix 17.1 The discrete-time analogue of the continuous-time fishery models examined in Chapter 17	596
Chapter 18	Forest resources	598
	Learning objectives	598
	Introduction	598
18.1	The current state of world forest resources	599
18.2	Characteristics of forest resources	601
18.3	Commercial plantation forestry	605
18.4	Multiple-use forestry	612
18.5	Socially and privately optimal multiple-use plantation forestry	615
18.6	Natural forests and deforestation	615
18.7	Government and forest resources	619
	Summary	619
	Further reading	620
	Discussion questions	620
	Problems	621
	Appendix 18.1 Mathematical derivations	622
	Appendix 18.2 The length of a forest rotation in the infinite-rotation model: some comparative statics	623
Chapter 19	Accounting for the environment	626
	Learning objectives	626
	Introduction	627
19.1	Environmental indicators	627
19.2	Environmental accounting: theory	631
19.3	Environmental accounting: practice	640
19.4	Sustainability indicators	650
19.5	Concluding remarks	656
	Further reading	658
	Discussion questions	659
	Problems	659
	Appendix 19.1 National income, the return on wealth, Hartwick's rule and sustainable income	660
	Appendix 19.2 Adjusting national income measurement to account for the environment	663
	Appendix 19.3 The UNSTAT proposals	666
	<i>References</i>	671
	<i>Index</i>	689
