1. Introduction

1.1 The use of statistics in research
1.2 Presenting medical statistics
1.3 This book
   1.3.1 Statistical analyses and software
   1.3.2 References
   1.3.3 Using this book
   1.3.4 Conventions used in the book
1.4 Final word

2. Introduction to the research process

2.1 Defining the research question
2.2 Writing a research protocol
2.3 Data collection
2.4 Transferring the data to computer: coding and data entry
2.5 Data checking and cleaning
2.6 Using computer packages
2.7 Record keeping
2.8 Presenting results
2.9 When to seek help from a statistician
Contents

3. Writing a research protocol 15
   3.1 The development cycle 15
   3.2 Title 15
   3.3 Aims of the research study 16
   3.4 Primary and secondary aims 16
   3.5 Study design 17
   3.6 Sample size calculations 17
       3.6.1 Prevalence studies 18
       3.6.2 Screening studies (sensitivity and specificity) 18
       3.6.3 Comparison studies 19
       3.6.4 Computer packages 19
       3.6.5 Sample size for two proportions 20
       3.6.6 Sample size for two means 22
       3.6.7 Unequal-sized groups 22
       3.6.8 Subgroup and multifactorial analyses 23
       3.6.9 Cluster randomised trials 23
       3.6.10 Presentation of sample size statements 23
       3.6.11 Feasibility 24
   3.7 Plan of statistical analysis 24
   3.8 Ethical approval 24
3.8.1 Ethical approval process in the UK 24
3.9 Where it goes wrong 25

4. Writing up a research study 27
4.1 Introduction 27
4.2 Contents of each section of the report 27
4.2.1 Abstract 27
4.2.2 Introduction 28
4.2.3 Methods 29
4.2.4 Results 30
4.2.5 Discussion 31
4.3 Special circumstances 32
4.3.1 Writing abstracts for conferences 32
4.3.2 Short reports and research letters 32

5. Introduction to presenting statistical analyses 33
5.1 Introduction 33
5.2 Presenting numerical data 33
5.3 Beginning the results section 35
5.4 Describing the results of the recruitment process 35
5.5 Assessing non-response bias 35
5.6 Presenting the results for different media 35
5.7 Drawing up a profile of a group of subjects 39
5.8 Drawing graphs 39
5.9 Using text to refer to tables and graphs 39
5.10 Presenting categorical data 39
5.10.1 Tables for categorical data 39
5.10.2 Graphs for categorical data 40
5.11 Presenting continuous data 40
5.11.1 Tables and text 40
5.11.2 Presenting transformed data 41
8. Analysing matched or paired data  71
8.1 Introduction  71
8.2 Continuous paired data: the paired t test  72
  8.2.1 Presenting the results of a paired t test  73
8.2.2 Log transformations  75
8.2.3 Presenting the results after log transformation  76
8.2.4 Comment on results  76
8.2.5 Extending the analysis  77
8.3 Non-Normal data  77
  8.3.1 Presenting the results of non-parametric or rank tests  78
8.4 Matched case–control data  80
  8.4.1 Presentation of matched case–control data  82
  8.4.2 Comment on results and extensions  82
8.5 Matched cohort data  83
  8.5.1 Presenting the results of a matched cohort study  85
  8.5.2 Comment on results  86
8.6 Further reading  87

9. Analysing relationships between variables  89
9.1 Introduction  89
9.2 Correlation  89
  9.2.1 Pearson's correlation coefficient  90
  9.2.2 Presenting the results of a correlation analysis  90
  9.2.3 Calculating and presenting correlations between several variables  93
9.2.4 Comment on results 93
9.2.5 Presenting correlations when
data are transformed 95
9.2.6 Rank correlation 96
9.2.7 Presenting the results for rank
 correlation 96
9.2.8 Extending the analysis 96
9.3 Regression 96
9.3.1 Introduction 96
9.3.2 Presenting the results of simple
linear regression 97
9.3.3 Performing and presenting
several regressions 99
9.3.4 Standardising regression
coefficients 102
9.3.5 Comment on the results 102
9.3.6 Log transformations 102
9.3.7 Prediction 102
9.3.8 Extending the analysis 103
9.4 Further reading 103

10. Multifactorial analyses 107
10.1 Introduction 107
10.1.1 Planning the analysis 107
10.1.2 Preliminary presentation
of the data 108
10.1.3 Missing data 108
10.2 One-way analysis of
variance 109
10.2.1 Introduction 109
10.2.2 Presenting the results of one-
way analysis of variance 112
10.2.3 Reference categories 113
10.2.4 Further analyses 113
10.2.5 Kruskal–Wallis analysis of
variance 114
10.3 Multiple regression 114
10.3.1 Introduction 114
10.3.2 Presenting multiple regression
analyses 114
10.3.3 Presenting multiple regression with categorical variables 117
10.3.4 Multiple regression or analysis of variance? 119
10.3.5 Presenting unadjusted and adjusted estimates 122
10.4 Logistic regression 125
10.4.1 Introduction 125
10.4.2 Presenting the results of logistic regression 128
10.4.3 Presenting logistic regression with categorical predictor variables 129
10.4.4 Presenting unadjusted and adjusted odds ratios 132
10.5 Further reading 133

11. Survival analysis 135
11.1 Introduction 135
11.1.1 Description of the study sample 137
11.1.2 Kaplan–Meier survival curves 137
11.1.3 Low event rates 141
11.2 Kaplan–Meier estimates of survival rates 141
11.3 The log rank test 144
11.4 Cox regression 144
11.4.1 Presenting the results of the single variable Cox regression 145
11.4.2 Comment on the results 147
11.4.3 Extending the analysis 147
11.5 Further reading 149

12. Presenting a randomised controlled trial 151
12.1 Introduction to the CONSORT statement 151
12.2 The CONSORT checklist 153
12.2.1 Title and abstract (checklist item 1) 155
12.2.2 Participants (checklist item 3) 155
12.2.3 Intervention (checklist item 4) 155
12.2.4 Outcomes (checklist item 6) 155
12.2.5 Sample size (checklist item 7) 155
12.2.6 Randomisation (checklist items 8–10) 156
12.2.7 Blinding (checklist item 11) 156
12.2.8 Statistical methods (checklist item 12) 157
12.2.9 Participant flow and recruitment details (checklist items 13 and 14) 157
12.2.10 Baseline data (checklist item 15) 157
12.2.11 Outcome data (checklist item 17) 160
12.2.12 Interpretation and presentation of a non-significant result (checklist item 20) 161
12.2.13 Ancillary analyses (checklist item 18) 162
12.3 Intention to treat analysis 162
12.3.1 Introduction 162
12.3.2 Number needed to treat 163
12.4 Cluster-randomised trials 163
12.4.1 Introduction 163
12.4.2 Recruitment bias 163
12.5 Presenting trials with other designs 164
