Contents

Introduction ix
Chapter 1. **Manifolds and Smooth Structures** 1

A. Definitions and Examples 1
B. Tangent Bundle, Cotangent Bundles, and Riemannian Metrics 4
C. Some Historical Remarks 7

Chapter 2. **The Euler Number** 9

A. The Degree Theorem 9
B. Hopf Index Theorem for Vector Fields and the Euler Number . . . 12
C. The Morse Formula for the Euler Number 15
D. The Gauss–Bonnet Theorem 17

Chapter 3. **Foliations** 22

A. Definition and Examples of Foliations 22
B. Sullivan's Theorem 24
C. Novikov's Theorem 26
D. Dissecting Foliated 3-Manifolds 27

Chapter 4. **The Topological Classification of Simply-Connected 4-Manifolds** 38

A. Intersection Pairing and the Statement of the Classification Theorem 38
B. A Review of Classical h-Cobordism Theory in Dimension ≥ 5 . . 41
C. The Disk Theorems 46

Chapter 5. **Donaldson's Theory** 57

A. Vector Bundles and Connections 58
B. The Self-Dual Equation, Topological Invariants, and Yang–Mills Theory over a Complex Line Bundle 62
C. A Glimpse of Donaldson's Proof and Fintushel and Stern's Work . 66

Chapter 6. **Fake $\mathbf{R}^4$'s** 72

A. Kirby's Picture 72
B. Some other Fake $\mathbf{R}^4$'s. 74
C. Uncountably Many Exotic Smooth Structures on $\mathbf{R}^4$ 74
