

# Contents

-1. Introduction	vii
0. Riemannian Geometry up to 1950	1
A. Gauss, Riemann, Christoffel and Levi-Civita	1
B. Van Mangoldt, Hadamard, Elie Cartan and Heinz Hopf	3
C. Synge, Myers, Preissmann: The use of geometric tools	4
D. Hodge, harmonic forms and the Bochner technique: The use of analysis	5
E. Allendoerfer, Weil and Chern	6
F. Existing tools and a brief look at the new ones	8
G. Existing examples and a brief look at the new ones	10
1. Comments on the Main Topics I, II, III, IV, V under Consideration	13
I. Curvature and Topology	17
A. Pinching Problems	17
1. Introduction	17
2. Positive Pinching A digression: Comparison theorems	18
3. Pinching around zero	25
4. Negative pinching	26
B. Curvature of a given sign	27
1. The positive side: Sectional curvature	27
2. The positive side: Ricci curvature	33
3. The positive side: Scalar curvature	35
4. The negative side: Sectional curvature	38
5. The negative side: Ricci curvature	43
C. Finiteness, compactness, collapsing and the space of all Riemannian structures	44
1. Finiteness results A digression: Does the curvature determine the metric?	44
2. Compactness, convergence results	49
3. The set of all Riemannian metrics: Collapsing	52
II. The Geometrical Hierarchy of Riemannian Manifolds: Space Forms	55
A. The constant curvature case	55
B. Space forms of rank one	57
C. Space forms of symmetric spaces of rank larger than one	58

III. The Set of Riemannian Structures on a Given Compact Manifold: Is There a Best Metric?	61
A. The problem	61
B. The minimal volume and $\min\ \mathbf{R}\ ^{d/2}$	62
C. The case of Einstein manifolds	63
Digression: The Yamabe Problem	63
D. Some topological closures	67
IV. The Spectrum, the Eigenfunctions	69
V. Periodic Geodesics, the Geodesic Flow	79
A. Periodic geodesics	79
A digression: Geodesics joining two points	81
B. The geodesic flow (geometry and dynamics)	86
Digression: Entropies in Riemannian Geometry	90
TOP. Some Other Riemannian Geometry Topics of Interest	93
1. Volumes	93
A. Bishop's Theorem	93
B. The isoperimetric profile	93
C. The embolic volume	96
D. The minimal volume	96
E. The systolic story	98
2. Isometric embedding	101
3. Holonomy groups and special metrics: Another (very restricted) Riemannian hierarchy, Kähler manifolds	101
A. Holonomy groups	102
B. Kähler manifolds	104
4. Cut-loci	106
5. Noncompact manifolds	108
6. Bundles over Riemannian manifolds	111
A. Exterior differential forms (and some others)	111
B. Spinors	114
C. Various other bundles	116
7. Harmonic maps between Riemannian manifolds	119
8. Low dimensional Riemannian geometry	120
9. Some generalizations of Riemannian geometry	120
10. Submanifolds	127
A. The case of surfaces in $\mathbf{R}^3$	128
B. Higher dimensions	129
C. Geometric measure theory and pseudo-holomorphic curves	129
Bibliography	131
Subject Index	165
Author Index	177
