Contents

Preface vii

Chapter 1. Introduction 1
1.1. How do you do ? 1
1.2. What are we interested in ? 1
1.3. Enveloping algebras 3

Chapter 2. The Serre relations 9
2.1. The Serre relations 9
2.2. The quantum algebra of type A_{r-1} 13

Chapter 3. Kac-Moody Lie algebras 15
3.1. Lie algebras by generators and relations 15
3.2. Kac-Moody Lie algebras 17
3.3. The quantum algebra of type $A_{r-1}^{(1)}$ 21

Chapter 4. Crystal bases of U_v-modules 23
4.1. Integrable modules 23
4.2. The Kashiwara operators 24
4.3. Crystal bases 27

Chapter 5. The tensor product of crystals 29
5.1. Basics of crystal bases 29
5.2. Tensor products of crystal bases 34

Chapter 6. Crystal bases of U_v^- 37
6.1. Triangular decomposition of U_v 37
6.2. Integrable highest weight modules 39
6.3. Crystal bases of U_v^- 42

Chapter 7. The canonical basis 47
7.1. A review of Lusztig's canonical basis 47
7.2. The lattice of the canonical basis 51

Chapter 8. Existence and uniqueness (part I) 55
8.1. Preparatory lemmas 55
8.2. The first main theorem 59

Chapter 9. Existence and uniqueness (part II) 61
9.1. Preparatory results 61
9.2. The second main theorem 65

Chapter 10. The Hayashi realization 75
10.1. Partitions and the Hayashi realization 75
10.2. Generalization to the case of multipartitions 85

Chapter 11. Description of the crystal graph of $V(\Lambda)$ 87
11.1. A theorem for proving the Misra-Miwa theorem 87
11.2. The Misra-Miwa theorem 94

Chapter 12. An overview of the applications to Hecke algebras 97
12.1. The Hecke algebra of type $G(m, 1, n)$ 97
12.2. Consequences of Theorem 12.5 101

Chapter 13. The Hecke algebra of type $G(m, 1, n)$ 105
13.1. The affine Hecke algebra 105
13.2. Semi-normal representations 107
13.3. The decomposition map 111
13.4. Specht module theory 113
13.5. A theorem of Morita type 117
13.6. Refined induction and restriction functors 118

Chapter 14. The proof of Theorem 12.5 123
14.1. Representations of a cyclic quiver 123
14.2. The Hall algebra and the quantum algebra 127
14.3. Some results from the geometric theory 133
14.4. Proof of the generalized LLT conjecture 142

Chapter 15. Reference guide 147

Bibliography 149
