Contents

Preface v

Chapter 1. Introduction 1
1. Trace theory 1
2. Organizing the book 3
3. Notation 4
4. Assumptions 4
5. Notes 6

Chapter 2. Analytic approach 9
1. Operators G_D and K_D 10
2. Operator V_D and equation $Lu = \psi(u)$ 11
3. Algebraic approach to the equation $Lu = \psi(u)$ 15
4. Choquet capacities 16
5. Notes 17

Chapter 3. Probabilistic approach 19
1. Diffusion 20
2. Superprocesses 24
3. Superdiffusions 28
4. Notes 33

Chapter 4. $\mathbb{N}$-measures 35
1. Main result 36
2. Construction of measures $\mathbb{N}_x$ 36
3. Applications 40
4. Notes 47

Chapter 5. Moments and absolute continuity properties of superdiffusions 49
1. Recursive moment formulae 49
2. Diagram description of moments 54
3. Absolute continuity results 56
4. Notes 59

Chapter 6. Poisson capacities 61
1. Capacities associated with a pair (k, m) 61

2. Poisson capacities 62
3. Upper bound for $\mathrm{Cap}(\Gamma)$ 63
4. Lower bound for Cap_x 67
5. Notes 69

Chapter 7. Basic inequality 71
1. Main result 71
2. Two propositions 71
3. Relations between superdiffusions and conditional diffusions in two open sets 72
4. Equations connecting P_x and $\mathbb{N}_x$ with Π_x^ν 74
5. Proof of Theorem 1.1 76
6. Notes 77

Chapter 8. Solutions w_Γ are σ-moderate 79
1. Plan of the chapter 79
2. Three lemmas on the conditional Brownian motion 80
3. Proof of Theorem 1.2 82
4. Proof of Theorem 1.3 83
5. Proof of Theorem 1.5 84
6. Proof of Theorems 1.6 and 1.7 85
7. Notes 86

Chapter 9. All solutions are σ-moderate 89
1. Plan 89
2. Proof of Localization theorem 90
3. Star domains 93
4. Notes 101

Appendix A. An elementary property of the Brownian motion
J.-F. Le Gall 103

Appendix B. Relations between Poisson and Bessel capacities
I. E. Verbitsky 107
Notes 111
