

Contents

Chapter 1

Numeration Methods

	<i>Introduction</i>	1
1.1	Three methods of numeration	3
1.2	Examples from history	12
1.3	Computation techniques	21
1.4	Base 5 arithmetic	28
1.5	Conversion of bases	33
1.6	Some applications of binary notation	37
	<i>For Further Reading</i>	41

Chapter 2

Sets

	<i>Introduction</i>	43
2.1	Set notation	44
2.2	Operations on sets	50
2.3	An application of set theory	54
2.4	Sets of numbers	59
2.5	Cardinal numbers of infinite sets	64
	<i>For Further Reading</i>	68

Chapter 3

Mathematical Systems

3.1	Operations	71
3.2	The associative property	73
3.3	The commutative property	76
3.4	The closure property	78
3.5	The identity element	80
3.6	Inverse elements	82
3.7	The distributive property	84
3.8	Summary	86
3.9	Modulo systems	87
	<i>For Further Reading</i>	93

Chapter 4

Symbolic Logic

<i>Introduction</i>	95
4.1 Statements	96
4.2 More connectives	101
4.3 More on truth tables & logical statements	105
4.4 More on the conditional	108
4.5 Valid and invalid arguments	112
4.6 An application of logic	120
<i>For Further Reading</i>	125

Chapter 5

Relations and Functions

<i>Introduction</i>	127
5.1 Relations	127
5.2 Functions	132
5.3 Linear relations and functions	136
5.4 Linear inequalities	139
5.5 Linear programming	141
5.6 The distance formula	146
5.7 Conic sections	147
5.8 Exponential and sequence functions	154
<i>For Further Reading</i>	159

Chapter 6

Probability

<i>Introduction</i>	161
6.1 Understanding the language of probability	162
6.2 Counting techniques: The multiplicative principle and permutations	166
6.3 Counting techniques: Combinations and distinguishability	172
6.4 Multiplicative and additive principles of probability	177
6.5 Pascal's triangle	184
6.6 Expected values: The law of large numbers	188

6.7	The Monte Carlo method	195
	<i>For Further Reading</i>	197
	Appendix: The expected value of a typical slot machine	198

Chapter 7

Statistics

	<i>Introduction</i>	201
7.1	Formulating data: Frequency distributions	203
7.2	Measures of central tendency	208
7.3	Measures of dispersion	215
7.4	The normal approximation to the binomial distribution	221
7.5	Testing hypotheses	227
7.6	Relationships between sets of data	230
	<i>For Further Reading</i>	237

Chapter 8

Matrices

	<i>Introduction</i>	239
8.1	Basic matrix operations	240
8.2	Matrix multiplication	244
8.3	The multiplicative identity	248
8.4	Determinants	250
8.5	The inverse of a 2×2 matrix	253
8.6	Properties of matrices	257
8.7	An application of matrix theory	259
8.8	Code theory	262
	<i>For Further Reading</i>	265

Chapter 9

An Introduction to Computers

	<i>Introduction</i>	267
9.1	How does a computer work?	272
9.2	A typical computer	276

9.3	Compiler language	282
9.4	Examples of FORTRAN programs	284
9.5	Subscripted variables	292
9.6	BASIC language	295
	<i>For Further Reading</i>	301

Chapter 10

Transformational Geometry

	<i>Introduction</i>	303
10.1	Reflections	308
10.2	Translations and rotations	312
10.3	Size transformations	318
10.4	The inversion transformation	324
10.5	Matrices and transformations	327
	<i>For Further Reading</i>	331
	Tables	334
	Answers to Selected Problems	338
	Acknowledgements	364
	Index	367
