Figures	xxi
Tables	xxv
Examples	xxix
About This Guide	xxxv
What This Guide Contains.....	xxxv
What's New in This Edition	xxxviii
What You Should Know Before Reading This Guide.....	xxxviii
How to Obtain the Sample Code	xl
Nate Robins' OpenGL Tutors	xl
Errata.....	xl
Style Conventions	xli
Acknowledgments	xliii
1. Introduction to OpenGL	1
What Is OpenGL?	2
A Smidgen of OpenGL Code	5
OpenGL Command Syntax	7
OpenGL as a State Machine	9
OpenGL Rendering Pipeline.....	10
Display Lists.....	11
Evaluators	11
Per-Vertex Operations	12
Primitive Assembly.....	12

Pixel Operations	12
Texture Assembly	13
Rasterization	13
Fragment Operations	13
OpenGL-Related Libraries	14
Include Files	15
GLUT, the OpenGL Utility Toolkit	16
Animation	20
The Refresh That Pauses	22
Motion = Redraw + Swap	23

2. State Management and Drawing Geometric Objects 27

A Drawing Survival Kit	29
Clearing the Window	30
Specifying a Color	32
Forcing Completion of Drawing	34
Coordinate System Survival Kit	36
Describing Points, Lines, and Polygons	37
What Are Points, Lines, and Polygons?	37
Specifying Vertices	41
OpenGL Geometric Drawing Primitives	42
Basic State Management	48
Displaying Points, Lines, and Polygons	50
Point Details	50
Line Details	51
Polygon Details	55
Normal Vectors	63
Vertex Arrays	65
Step 1: Enabling Arrays	67
Step 2: Specifying Data for the Arrays	68
Step 3: Dereferencing and Rendering	71
Interleaved Arrays	78
Vertex Arrays in Buffer Objects	82
Utilizing Buffer Objects with Vertex-Array Data	82
Creating Buffer Objects for Vertex Data	83
Making a Buffer Object Active	83

Allocating and Initializing Buffer Objects with Vertex Data	84
Updating Data Values in Buffer Objects	88
Cleaning up Buffer Objects	90
Attribute Groups.....	90
Some Hints for Building Polygonal Models of Surfaces.....	93
An Example: Building an Icosahedron	95
3. Viewing	103
Overview: The Camera Analogy.....	106
A Simple Example: Drawing a Cube	109
General-Purpose Transformation Commands.....	114
Viewing and Modeling Transformations	117
Thinking about Transformations.....	117
Modeling Transformations	120
Viewing Transformations.....	126
Projection Transformations.....	133
Perspective Projection	133
Orthographic Projection	136
Viewing Volume Clipping	138
Viewport Transformation.....	138
Defining the Viewport	39
The Transformed Depth Coordinate.....	141
Troubleshooting Transformations	142
Manipulating the Matrix Stacks.....	145
The Modelview Matrix Stack.....	148
The Projection Matrix Stack.....	148
Additional Clipping Planes	149
Examples of Composing Several Transformations.....	152
Building a Solar System.....	153
Building an Articulated Robot Arm	156
Reversing or Mimicking Transformations.....	160
4. Color	165
Color Perception.....	166
Computer Color	168
RGBA versus Color-Index Mode.....	170

RGBA Display Mode.....	171
Color-Index Display Mode.....	173
Choosing between RGBA and Color-Index Mode.....	175
Changing between Display Modes.....	176
Specifying a Color and a Shading Model.....	176
Specifying a Color in RGBA Mode.....	177
Specifying a Color in Color-Index Mode.....	178
Specifying a Shading Model.....	179
5. Lighting.....	183
A Hidden-Surface Removal Survival Kit.....	185
Real-World and OpenGL Lighting.....	187
Ambient, Diffuse, Specular, and Emissive Light.....	188
Material Colors.....	189
RGB Values for Lights and Materials.....	189
A Simple Example: Rendering a Lit Sphere.....	190
Creating Light Sources.....	194
Color.....	196
Position and Attenuation.....	197
Spotlights.....	199
Multiple Lights.....	200
Controlling a Light's Position and Direction.....	201
Selecting a Lighting Model.....	207
Global Ambient Light.....	208
Local or Infinite Viewpoint.....	209
Two-Sided Lighting.....	209
Secondary Specular Color.....	210
Enabling Lighting.....	211
Defining Material Properties.....	211
Diffuse and Ambient Reflection.....	213
Specular Reflection.....	214
Emission.....	214
Changing Material Properties.....	215
Color Material Mode.....	217
The Mathematics of Lighting.....	220
Material Emission.....	221

Scaled Global Ambient Light	222
Contributions from Light Sources	222
Putting It All Together	224
Secondary Specular Color	225
Lighting in Color-Index Mode	226
The Mathematics of Color-Index Mode Lighting.....	227
6. Blending, Antialiasing, Fog, and Polygon Offset	229
Blending.....	231
The Source and Destination Factors	232
Enabling Blending.....	235
Combining Pixels Using Blending Equations.....	235
Sample Uses of Blending	238
A Blending Example.....	240
Three-Dimensional Blending with the Depth Buffer	243
Antialiasing.....	247
Antialiasing Points or Lines	249
Antialiasing Geometric Primitives with Multisampling.....	255
Antialiasing Polygons.....	259
Fog	261
Using Fog.....	261
Fog Equations	264
Point Parameters.....	271
Polygon Offset	274
7. Display Lists.....	277
Why Use Display Lists?	278
An Example of Using a Display List	279
Display List Design Philosophy.....	282
Creating and Executing a Display List	285
Naming and Creating a Display List.....	286
What's Stored in a Display List?	287
Executing a Display List	289
Hierarchical Display Lists.....	290
Managing Display List Indices	291
Executing Multiple Display Lists.....	292

Managing State Variables with Display Lists	297
Encapsulating Mode Changes.....	299
8. Drawing Pixels, Bitmaps, Fonts, and Images	301
Bitmaps and Fonts.....	303
The Current Raster Position.....	305
Drawing the Bitmap.....	306
Choosing a Color for the Bitmap	308
Fonts and Display Lists	309
Defining and Using a Complete Font.....	310
Images.....	312
Reading, Writing, and Copying Pixel Data	313
Imaging Pipeline	321
Pixel Packing and Unpacking	324
Controlling Pixel-Storage Modes	325
Pixel-Transfer Operations	330
Pixel Mapping	333
Magnifying, Reducing, or Flipping an Image	334
Reading and Drawing Pixel Rectangles.....	337
The Pixel Rectangle Drawing Process	338
Tips for Improving Pixel Drawing Rates	341
Imaging Subset	342
Color Tables	344
Convolutions	349
Color Matrix.....	357
Histogram.....	359
Minmax.....	362
9. Texture Mapping	365
An Overview and an Example.....	371
Steps in Texture Mapping	371
A Sample Program.....	372
Specifying the Texture.....	375
Texture Proxy.....	380
Replacing All or Part of a Texture Image	382
One-Dimensional Textures	385

Three-Dimensional Textures	387
Compressed Texture Images	392
Using a Texture's Borders	395
Mipmaps: Multiple Levels of Detail	395
Filtering	406
Texture Objects	409
Naming a Texture Object	410
Creating and Using Texture Objects	410
Cleaning Up Texture Objects	413
A Working Set of Resident Textures	414
Texture Functions	416
Assigning Texture Coordinates	420
Computing Appropriate Texture Coordinates	422
Repeating and Clamping Textures	423
Automatic Texture-Coordinate Generation	429
Creating Contours	430
Sphere Map	434
Cube Map Textures	436
Multitexturing	438
Texture Combiner Functions	444
The Interpolation Combiner Function	448
Applying Secondary Color after Texturing	450
Secondary Color When Lighting Is Disabled	450
Secondary Specular Color When Lighting Is Enabled	450
The Texture Matrix Stack	451
Depth Textures	452
Creating a Shadow Map	453
Generating Texture Coordinates and Rendering	454
10. The Framebuffer	457
Buffers and Their Uses	460
Color Buffers	461
Clearing Buffers	462
Selecting Color Buffers for Writing and Reading	463
Masking Buffers	465
Testing and Operating on Fragments	467

Scissor Test	468
Alpha Test	468
Stencil Test	470
Depth Test	475
Occlusion Query	476
Blending, Dithering, and Logical Operations.....	479
The Accumulation Buffer	482
Scene Antialiasing	483
Motion Blur	489
Depth of Field	489
Soft Shadows	494
Jittering	494
11. Tessellators and Quadrics	497
Polygon Tessellation.....	498
Creating a Tessellation Object	500
Tessellation Callback Routines	500
Tessellation Properties	505
Polygon Definition.....	510
Deleting a Tessellation Object	513
Tessellation Performance Tips	513
Describing GLU Errors	514
Backward Compatibility	514
Quadrics: Rendering Spheres, Cylinders, and Disks	515
Managing Quadrics Objects	516
Controlling Quadrics Attributes	517
Quadrics Primitives	519
12. Evaluators and NURBS.....	525
Prerequisites.....	527
Evaluators	528
One-Dimensional Evaluators	528
Two-Dimensional Evaluators.....	534
Using Evaluators for Textures	540
The GLU NURBS Interface	542
A Simple NURBS Example.....	542
Managing a NURBS Object	547

Creating a NURBS Curve or Surface.....	551
Trimming a NURBS Surface	557
13. Selection and Feedback	561
Selection	562
The Basic Steps	563
Creating the Name Stack.....	564
The Hit Record	566
A Selection Example.....	567
Picking.....	570
Hints for Writing a Program That Uses Selection.....	581
Feedback	583
The Feedback Array	585
Using Markers in Feedback Mode	586
A Feedback Example.....	586
14. Now That You Know	591
Error Handling.....	593
Which Version Am I Using?.....	595
Utility Library Version	596
Window System Extension Versions	597
Extensions to the Standard	597
Extensions to the Standard for Microsoft Windows (WGL).....	599
Cheesy Translucency.....	600
An Easy Fade Effect.....	600
Object Selection Using the Back Buffer.....	602
Cheap Image Transformation	603
Displaying Layers.....	604
Antialiased Characters	605
Drawing Round Points	608
Interpolating Images	608
Making Decals	608
Drawing Filled, Concave Polygons Using the Stencil Buffer	610
Finding Interference Regions	611
Shadows	613
Hidden-Line Removal.....	614

Hidden-Line Removal with Polygon Offset.....	614
Hidden-Line Removal with the Stencil Buffer.....	615
Texture Mapping Applications.....	616
Drawing Depth-Buffered Images.....	617
Dirichlet Domains.....	617
Life in the Stencil Buffer.....	619
Alternative Uses for glDrawPixels() and glCopyPixels()	620
15. OpenGL 2.0 and the OpenGL Shading Language	623
Why OpenGL 2.0?.....	624
Point Sprites.....	624
The OpenGL Graphics Pipeline and Programmable Shading.....	626
Vertex Processing	627
Fragment Processing	629
Using GLSL Shaders.....	630
A Sample Shader.....	630
OpenGL / GLSL Interface.....	631
The OpenGL Shading Language	638
Creating Shaders with GLSL.....	639
The Starting Point	639
Declaring Variables	639
Aggregate Types	641
Statements.....	648
Functions.....	651
Using OpenGL State Values in GLSL Programs	653
Accessing Texture Maps in Shaders.....	653
Vertex Shader Specifics	655
Fragment Shaders.....	662
A. Order of Operations	665
Overview.....	666
Geometric Operations	667
Per-Vertex Operations.....	667
Primitive Assembly.....	668
Pixel Operations	668
Texture Memory.....	669

Fragment Operations.....	669
Odds and Ends.....	670
B. State Variables	671
The Query Commands	672
OpenGL State Variables.....	674
Current Values and Associated Data.....	676
Vertex Array	677
Transformation	681
Coloring	683
Lighting.....	684
Rasterization.....	686
Multisampling.....	688
Texturing.....	689
Pixel Operations	695
Framebuffer Control.....	697
Pixels.....	698
Evaluators.....	704
Hints	705
Implementation-Dependent Values.....	706
Implementation-Dependent Pixel Depths.....	710
Miscellaneous	710
C. OpenGL and Window Systems.....	713
Accessing New OpenGL Functions	714
GLX: OpenGL Extension for the X Window System.....	715
Initialization.....	716
Controlling Rendering	717
GLX Prototypes	719
AGL: OpenGL Extensions for the Apple Macintosh	722
Initialization.....	722
Rendering and Contexts	723
Managing an OpenGL Rendering Context.....	723
On-Screen Rendering	723
Off-Screen Rendering	724
Full-Screen Rendering	724

Swapping Buffers.....	724
Updating the Rendering Buffers	724
Using an Apple Macintosh Font	724
Error Handling	725
AGL Prototypes	725
PGL: OpenGL Extension for IBM OS/2 Warp	727
Initialization.....	727
Controlling Rendering.....	728
PGL Prototypes.....	729
WGL: OpenGL Extension for Microsoft	
Windows 95/98/NT/ME/2000/XP	731
Initialization.....	731
Controlling Rendering.....	732
WGL Prototypes.....	733
D. Basics of GLUT: The OpenGL Utility Toolkit	737
Initializing and Creating a Window	738
Handling Window and Input Events.....	739
Loading the Color Map	741
Initializing and Drawing Three-Dimensional Objects.....	741
Managing a Background Process.....	743
Running the Program.....	743
E. Calculating Normal Vectors	745
Finding Normals for Analytic Surfaces	747
Finding Normals from Polygonal Data	749
F. Homogeneous Coordinates and Transformation Matrices.....	751
Homogeneous Coordinates.....	752
Transforming Vertices.....	752
Transforming Normals.....	753
Transformation Matrices.....	753
Translation	754
Scaling	754
Rotation.....	754

Perspective Projection	755
Orthographic Projection	756
G. Programming Tips	757
OpenGL Correctness Tips.....	758
OpenGL Performance Tips	760
GLX Tips.....	762
H. OpenGL Invariance	763
I. Built-In OpenGL Shading Language Variables and Functions	767
Variables	768
Vertex Shader Input Attributes Variables.....	768
Vertex Shader Special Output Variables.....	768
Vertex Shader Output Varying Variables	769
Built-In Implementation Constants.....	770
Built-In Uniform State Variables	771
Built-In Functions.....	780
Angle Conversion and Trigonometric Functions	780
Transcendental Functions.....	781
Basic Numerical Functions.....	782
Vector-Operation Functions	783
Matrix Functions	784
Vector-Component Relational Functions	784
Texture Lookup Functions	785
Fragment Processing Functions	790
Noise Functions.....	790
Glossary	791
Index	813
