Polynomial representations of GL_n

1 **Introduction** 1

2 **Polynomial Representations of $\mathbf{GL}_n(K)$: The Schur algebra** 11
2.1 Notation, etc. 11
2.2 The categories $M_K(n)$, $M_K(n,r)$ 12
2.3 The Schur algebra $S_K(n,r)$ 13
2.4 The map $e : K\Gamma \to S_K(n,r)$ 14
2.5 Modular theory 16
2.6 The module $E^{\otimes r}$ 17
2.7 Contravariant duality 19
2.8 $A_K(n,r)$ as $K\Gamma$-bimodule 21

3 **Weights and Characters** 23
3.1 Weights 23
3.2 Weight spaces 23
3.3 Some properties of weight spaces 24
3.4 Characters 26
3.5 Irreducible modules in $M_K(n,r)$ 28

4 **The modules $D_{\lambda,K}$** 33
4.1 Preamble 33
4.2 λ-tableaux 33
4.3 Bideterminants 34
4.4 Definition of $D_{\lambda,K}$ 35
4.5 The basis theorem for $D_{\lambda,K}$ 36
4.6 The Carter-Lusztig lemma 37
4.7 Some consequences of the basis theorem 39
4.8 James's construction of $D_{\lambda,K}$ 40

5 The Carter-Lusztig modules $V_{\lambda,K}$ 43
5.1 Definition of $V_{\lambda,K}$ 43
5.2 $V_{\lambda,K}$ is Carter-Lusztig's "Weyl module" 43
5.3 The Carter-Lusztig basis for $V_{\lambda,K}$ 45
5.4 Some consequences of the basis theorem 47
5.5 Contravariant forms on $V_{\lambda,K}$ 48
5.6 $\mathbb{Z}$-forms of $V_{\lambda,K}$ 50

6 Representation theory of the symmetric group 53
6.1 The functor $f : M_K(n,r) \to \mathsf{mod}\, KG(r)$ $(r \leq n)$ 53
6.2 General theory of the functor $f : \mathsf{mod}\, S \to \mathsf{mod}\, eSe$ 55
6.3 Application I. Specht modules and their duals 57
6.4 Application II. Irreducible $KG(r)$-modules, $\mathsf{char}\, K = p$ 60
6.5 Application III. The functor $f : M_K(N,r) \to M_K(n,r)$ $(N \geq n)$ 65
6.6 Application IV. Some theorems on decomposition numbers ... 67

Appendix: Schensted correspondence and Littelmann paths

A Introduction 73
A.1 Preamble 73
A.2 The Robinson-Schensted algorithm 74
A.3 The operators $\tilde{e}_c$, $\tilde{f}_c$ 75
A.4 What is to be done 78

B The Schensted Process 81
B.1 Notations for tableaux 81
B.2 The map $\mathsf{Sch} : I(n,r) \to T(n,r)$ 81
B.3 Inserting a letter into a tableau 82
B.4 Examples of the Schensted process 85
B.5 Proof that $(\mu, U, V) \leftarrow x_1$ belongs to $T(n,r)$ 88
B.6 The inverse Schensted process 89
B.7 The ladder 92

C Schensted and Littelmann operators 95
C.1 Preamble 95
C.2 Unwinding a tableau 96
C.3 Knuth's theorem 103
C.4 The "if" part of Knuth's theorem 107
C.5 Littelmann operators on tableaux 114
C.6 The proof of Proposition B 116

D Theorem A and some of its consequences 121
D.1 Ingredients for the proof of Theorem A 121
D.2 Proof of Theorem A 124
D.3 Properties of the operator C 127

D.4 The Littelmann algebra $L(n,r)$ 129
D.5 The modules M_Q 131
D.6 The λ-rectangle 134
D.7 Canonical maps 135
D.8 The algebra structure of $L(n,r)$ 137
D.9 The character of M_λ 139
D.10 The Littlewood–Richardson Rule 140
D.11 Lascoux, Leclerc and Thibon 143

E Tables 147
E.1 Schensted's decomposition of $I(3,3)$ 147
E.2 The Littelmann graph $I(3,3)$ 148
