

TABLE OF CONTENTS

PREFACE	v
TABLE OF CONTENTS	vii
J. BARWISE	
Monotone quantifiers and admissible sets	1
J. BERGSTRA	
The continuous functionals and E^2	39
S. FEFERMAN	
Recursion theory and set theory: A marriage of convenience	55
J.E. FENSTAD	
On the foundation of general recursion theory: Computations versus inductive definability	99
S.D. FRIEDMAN	
An introduction to β -recursion theory	111
S.D. FRIEDMAN	
Negative solutions to Post's problem, I	127
J.M.E. HYLAND	
The intrinsic recursion theory on the countable or continuous functionals	135
A.S. KECHRIS	
Spector second order classes and reflection	147
S.C. KLEENE	
Recursive functionals and quantifiers of finite types revisited I	185
M. LERMAN	
Lattices of α -recursively enumerable sets	223
W. MAASS	
High α -recursively enumerable degrees	239
W. MAREK and A.M. NYBERG	
Extendability of ZF models in the von Neuman hierarchy to models of KM theory of classes	271
J. MOLDESTAD	
On the role of the successor function in recursion theory	283
D. NORMANN	
Set recursion	303
D. NORMANN and V. STOLTENBERG-HANSEN	
A non-adequate admissible set with a good degree-structure	321
R.A. SHORE	
On the $\forall\exists$ -sentences of α -recursion theory	331
S.G. SIMPSON	
Short course on admissible recursion theory	355
V. STOLTENBERG-HANSEN	
Weakly inadmissible recursion theory	391
S.S. WAINER	
The 1-section of a non-normal type-2 objects	407
