

CONTENTS

Preface	V
I. RECURSION IN OBJECTS OF FINITE TYPE	
Recursion in the superjump, Peter Aczel, Peter G. Hinman	3
The superjump and the first recursively Mahlo ordinal Leo Harrington	43
Structural characterizations of classes of relations, Yiannis N. Moschovakis	53
The 1-section of a type n object, Gerald E. Sacks	81
II. SETS AND ORDINALS	
Admissible sets over models of set theory, K. Jon Barwise	97
An introduction to the fine structure of the constructible hierarchy, Keith J. Devlin	123
Degree theory on admissible ordinals, Stephen G. Simpson	165
More on set existence, Françoise Ville	195

III. INDUCTIVE DEFINABILITY

Inductive definitions and their closure ordinals, Stå1 Aanderaa	207
Ordinal recursion and inductive definitions, Douglas Cenzer	221
Inductive definitions, Robin O. Gandy	265
Inductive definitions and reflecting properties of admissible ordinals, Wayne Richter, Peter Aczel	301

IV. AXIOMATIC APPROACHES AND GENERAL DISCUSSION

On axiomatizing recursion theory, Jens Erik Fenstad	385
Dissecting abstract recursion, Thomas J. Grilliot	405
Model theory for dissecting recursion theory, Thomas J. Grilliot	421
Axiomatic theory of enumeration, Andrzej Grzegorzczuk	429
Post's problem for admissible sets, Stephen G. Simpson	437

V. A BIBLIOGRAPHY OF GENERALIZED RECURSION THEORY

Some papers in generalized recursion theory	445
An uncritical bibliography	446
Index	453
