

## CONTENTS

<b>Foreword.</b> . . . . .	<b>5</b>
<b>Notation</b> . . . . .	<b>7</b>
<b>Introduction</b> . . . . .	<b>17</b>
Chapter 1	
<b>Fundamental concepts</b>	<b>25</b>
§1. Functions and operations . . . . .	25
1.1. Alphabet. Words . . . . .	25
1.2. Functions. Terms. . . . .	27
1.3. Algebras . . . . .	32
1.4. Coding . . . . .	35
Examples and exercises. . . . .	37
§2. Fundamental computable operators . . . . .	38
2.1. Composition of partial functions . . . . .	38
2.2. Primitive recursion operator . . . . .	40
2.3. Operation of minimalization. . . . .	46
2.4. General recursive functions . . . . .	52
Addenda, examples and exercises . . . . .	54
Chapter 2	
<b>Primitive recursive functions and recursively enumerable sets</b>	<b>56</b>
§3. Primitive recursive functions . . . . .	56
3.1. Operations of summation and majorized inversion . . . . .	56
3.2. Primitive recursiveness of certain arithmetic functions . . . . .	60
3.3. Enumeration of pairs and $n$ -tuples of numbers . . . . .	67

3.4. Interdependence of primitive recursive operators and minimalization operators . . . . .	72
3.5. One-place primitive recursive functions . . . . .	76
Addenda, examples and exercises . . . . .	84
§4. Recursively enumerable sets . . . . .	86
4.1. Recursive and primitive recursive sets . . . . .	86
4.2. Recursively enumerable sets . . . . .	88
4.3. Generated sets . . . . .	91
4.4. Sets of $n$ -tuples of natural numbers . . . . .	94
Examples and exercises. . . . .	100

### Chapter 3

<b>General recursive and partial recursive functions</b>	<b>101</b>
§5. General recursive functions . . . . .	101
5.1. Recursions of the second order. . . . .	101
5.2. Universal general recursive function . . . . .	106
5.3. Rapidly growing functions. . . . .	113
5.4. Inversion of functions. Robinson's algebra. . . . .	116
Addenda, examples and exercises . . . . .	121
§6. Partial recursive functions. . . . .	122
6.1. Parametrization of partial recursive functions . . . . .	122
6.2. Universal partial recursive functions . . . . .	128
6.3. Completion of a function. Construction of a non-recursive recursively enumerable set. . . . .	131
6.4. Investigation of Kleene's representation . . . . .	135
Addenda, examples and exercises . . . . .	138

### Chapter 4

<b>Enumerated collections</b>	<b>141</b>
§7. Enumeration of collections of sets and functions . . . . .	141
7.1. Kleene's universal functions . . . . .	141

7.2. Kleene's enumeration . . . . .	144
7.3. Post's enumeration . . . . .	147
7.4. Single-valued enumerations . . . . .	153
Addenda, examples and exercises . . . . .	162
§8. Reducibility and creativity of sets . . . . .	163
8.1. Reducibility and $m$ -equivalence of sets . . . . .	164
8.2. Productive and creative sets . . . . .	166
8.3. Simple sets . . . . .	170
8.4. Maximal sets . . . . .	171
Addenda, examples and exercises . . . . .	176
§9. Enumeration of arbitrary collections. . . . .	181
9.1. Isomorphism and equivalence of enumerations . . . . .	181
9.2. One-one-reducibility of enumerations . . . . .	185
9.3. Total enumerations. . . . .	193
9.4. Families of objects of enumerated collections. . . . .	198
Addenda, examples and exercises . . . . .	201
§10. Universal and creative systems of sets . . . . .	202
10.1. $m$ -universal systems of sets . . . . .	202
10.2. Creative systems of sets . . . . .	206
10.3. Recursively inseparable sets . . . . .	210
Addenda, examples and exercises . . . . .	213

## Chapter 5

<b>Algorithms and Turing machines</b>	<b>215</b>
§11. Word sets and functions . . . . .	215
11.1. Word sets . . . . .	216
11.2. Fundamental word operators . . . . .	220
11.3. Direct definition of the class of partial recursive word functions . . . . .	226
Addenda, examples and exercises . . . . .	229

§12. Turing machines . . . . .	230
12.1. Turing–Post machines . . . . .	230
12.2. Computable functions . . . . .	237
12.3. Synthesis of Turing machines . . . . .	242
12.4. Theorems on the graph and on the existence of universal partial recursive functions . . . . .	255
12.5. Universal machines . . . . .	262
Addenda, examples and exercises . . . . .	265
§13. Applications . . . . .	267
13.1. The word problem for semigroups . . . . .	267
13.2. Identically true formulas of the first order predicate calculus . . . . .	275
13.3. Arithmetical sets . . . . .	282
13.4. Second order formulas . . . . .	287
Addenda, examples and exercises . . . . .	289

## Chapter 6

<b>Variants of Turing-Post machines and algorithms</b>	<b>295</b>
§14. Normal algorithms and operator algorithms . . . . .	295
14.1. Formal systems. Post productions . . . . .	296
14.2. Normal algorithms . . . . .	300
14.3. Operator algorithms . . . . .	303
Addenda and examples . . . . .	312
§15. Multitape machines and TAG systems . . . . .	313
15.1. General multitape machines . . . . .	313
15.2. Minsky machines . . . . .	316
15.3. Homogeneous productions. TAG systems . . . . .	326
Addenda, examples and exercises . . . . .	331
§16. Diophantine equations . . . . .	334
16.1. Diophantine predicates and functions . . . . .	335
16.2. Arithmetic representation . . . . .	341
16.3. Representability of natural numbers by polynomials . . . . .	346

<i>Contents</i>	15
16.4. Exponential equations . . . . .	349
Addenda and examples . . . . .	357
<b>Literature</b> . . . . .	<b>359</b>
<b>Index</b> . . . . .	<b>367</b>
