CONTENTS

I. On Explication 1

1. Introduction: Our Problems 1
2. On the Clarification of an Explicandum 3
3. Requirements for an Explicatum 5
4. Classificatory, Comparative, and Quantitative Concepts . . . 8
5. Comparative and Quantitative Concepts as Explicata 11
6. Formalization and Interpretation 15

II. The Two Concepts of Probability 19

8. The Semantical Concepts of Confirmation 19
9. The Two Concepts of Probability 23
10. The Logical Nature of the Two Probability Concepts 29
A. Probability$_1$, Degree of Confirmation (29)—*B*. Probability$_2$, Relative Frequency (33)
11. Psychologism in Deductive Logic 37
12. Psychologism in Inductive Logic 42
A. Probability as a Logical Relation (43)—*B*. The Classical Theory of Probability (47)

III. Deductive Logic 52

14. Preliminary Explanations 53
15. The Signs of the Systems $\mathfrak{L}$ 58
A. The Signs Occurring in Our Systems (58)—*B*. On the Possibility of an Ordered System (62)
16. The Rules of Formation 65
17. Rules of Truth 68
18. State-Descriptions ($\mathfrak{Z}$) and Ranges ($\mathfrak{R}$) 70
A. State-Descriptions (70)—*B*. The Requirements of Logical Independence and Completeness (72)—*C*. Families of Related Properties (76)—*D*. The Range of a Sentence (78)
19. Theorems on State-Descriptions and Ranges 80
20. L-Concepts 82
21. Theorems of Propositional Logic 89
A. Elementary Theorems of Propositional Logic (89)—*B*. Theorems on Truth-Tables (93)—*C*. Normal Forms (94)
22. Theorems on General Sentences 96
23. Theorems on Replacements 100
24. Theorems on Identity 101
25. On Predicate Expressions and Divisions 104

26. Isomorphic Sentences; Individual and Statistical Distributions . 108
A. Individual Correlations and Isomorphism (108)—*B*. Individual and Statistical Distributions (111)
27. Structure-Descriptions (Str) 114
28. Correlations for Basic Matrices 118
29. Some Numbers Connected with the Systems $\mathfrak{L}$ 121
31. The Systems $\mathfrak{L}^*$; the *Q*-Predicates 122
32. Logical Width 126
33. The *Q*-Normal Form 130
34. The *Q*-Numbers 134
35. Some Numbers Connected with the Systems $\mathfrak{L}^*$ 138
37. Simple Laws 141
38. Simple Laws of Conditional Form 144
40. Some Mathematical Definitions and Theorems 148
A. Some Mathematical Functions (149)—*B*. Limit (154)—*C*. Infinite Cardinal Numbers (155)—*D*. Combinatorics (156)

IV. The Problem of Inductive Logic 161
41. The Logical Concept of Probability 162
A. Probability$_1$ as a Measure of Evidential Support (164)—*B*. Probability$_1$ as a Fair Betting Quotient (165)—*C*. Probability$_1$ and Relative Frequency (167)—*D*. Probability$_1$ as an Estimate of Relative Frequency (168)—*E*. Some Comments on Other Conceptions (175)—*F*. Presuppositions of Induction (177)
42. Probability$_1$ and Probability$_2$ 182
A. The Shift in the Meaning of the Word 'Probability' (182)—*B*. On the Interpretation of Given Probability Statements (187)
43. Inductive and Deductive Logic 192
A. On the Possibility of Exact Rules of Induction (192)—*B*. The Relation between Deductive and Inductive Logic (199)
44. Logical and Methodological Problems 202
A. Methodological Problems (202)—*B*. Inductive Inferences (205)
45. Abstraction in Inductive Logic 208
A. Abstraction in Deductive and Inductive Logic (208)—*B*. The Requirement of Total Evidence (211)—*C*. The Applicability of Inductive Logic (213)—*D*. Dangers and Usefulness of Abstraction (215)
46. Is a Quantitative Inductive Logic Impossible? 219
47. Some Difficulties Involved in the Problem of Degree of Confirmation 226
A. Singular Prediction (226)—*B*. Confirming Cases for a Law (228)—*C*. More Complex Evidence (229)—*D*. Disconfirming Cases (229)—*E*. The Variety of Instances (230)—*F*. The Task before Us (231)
48. Is Probability$_1$ Used as a Quantitative Concept? 233
A. Probability$_1$ Is Used as a Comparative Concept (233)—*B*. Probability$_1$ and Games of Chance (234)—*C*. Probability$_1$ and Direct In-

ference (235)—*D.* Probability$_1$ and Betting Behavior (235)—*E.* Probability$_1$ Is Used as an Objective Concept (238)

49. The Question of the Usefulness of Inductive Logic 241
A. Theoretical Usefulness of Inductive Logic in Science (242)—*B.* Practical Usefulness of Inductive Logic: Probability as a Guide of Life (246)

50. The Problem of a Rule for Determining Decisions 252
A. The Problem (253)—*B.* The Rule of High Probability (254)—*C.* The Rule of Maximum Probability (255)—*D.* The Rule of the Use of Estimates (257)—*E.* The Rule of Maximizing the Estimated Gain (260)

51. The Rule of Maximizing the Estimated Utility 264
A. The Rule of Maximizing the Estimated Utility (265)—*B.* Daniel Bernoulli's Law of Utility (270)—*C.* Consequences of Bernoulli's Law (273)

52. On the Arguments of Degree of Confirmation 279

53. Some Conventions on Degree of Confirmation 284

54. Reduction of the Problem of Degree of Confirmation 287
A. Degree of Confirmation in the Infinite System (288)—*B.* The Null Confirmation (289)—*C.* Reduction to State-Descriptions (289)—*D.* Null Confirmation for the State-Descriptions (289)—*E.* The Requirement of Fitting Together (290)

V. The Foundation of Quantitative Inductive Logic: The Regular c-Functions 293

55. Regular m- and c-Functions for Finite Systems 293
A. Regular m- and c-Functions (294)—*B.* Deductive and Inductive Logic (296)—*C.* Probability$_1$ and Probability$_2$ (300)

56. Regular Functions for the Infinite System 302

57. Null Confirmation; Fitting Sequences 305
A. Theorems on Regular m-Functions (305)—*B.* Null Confirmation (307)—*C.* Fitting Sequences (309)

58. Almost L-True Sentences 311

59. Theorems on Regular c-Functions 315

60. Confirmation of Hypotheses by Observations; Bayes's Theorem . 326

61. Confirmation of a Hypothesis by a Predictable Observation . . 333

62. On Some Axiom Systems by Other Authors 337

VI. Relevance and Irrelevance 346

65. The Concepts of Relevance and Irrelevance 346

66. The Relevance Quotient 356

67. The Relevance Measure 360

68. Relevance Measures for Two Observations and Their Connections . 366

69. The Possible Relevance Situations for Two Observations and Their Connections 374

70. Relevance Measures for Two Hypotheses and Their Connections . 386
71. The Possible Relevance Situations for Two Hypotheses and Their Connections 391
72. Relevance Measures of State-Descriptions; First Method: Disjunctive Analysis 397
73. Second Method: Conjunctive Analysis 404
74. Extreme Relevance 409
75. Complete Relevance 414
76. Relations between Extreme and Complete Relevance 421

VII. Comparative Inductive Logic 428
79. The Problem of a Comparative Concept of Confirmation . . . 428
80. Requirements of Adequacy 430
81. Definition of the Comparative Concept of Confirmation $\mathfrak{MC}$ . . 435
82. Some Concepts Based on $\mathfrak{MC}$ 441
83. Further Theorems on Comparative Concepts 445
A. Theorems (445)—*B*. Koopman's Axiom System (450)
84. Maximum and Minimum Confirmation 454
85. Correspondence between Comparative and Quantitative Theorems 456
86. The Concept of Confirming Evidence 462
87. Hempel's Analysis of the Concept of Confirming Evidence . . . 468
88. Hempel's Definition of Confirming Evidence 478

VIII. The Symmetrical c-Functions 483
90. Symmetrical m-Functions 483
91. Symmetrical c-Functions 486
92. Theorems on Symmetrical c-Functions 489
94. The Direct Inductive Inference 492
95. The Binomial Law 498
96. Bernoulli's Theorem 503

IX. Estimation 511
98. The Problem of Estimation 511
99. A General Estimate-Function 520
100. Definition of the c-Mean Estimate-Function 524
A. Definition of the c-Mean Estimate-Function (525)—*B*. Some Terminological Remarks (528)—*C*. The Paradox of Estimation (530)
102. The Problem of the Reliability of an Estimate 533
103. The Estimated Square Error of an Estimate 537
104. Estimation of Frequencies 540
105. Direct Estimation of Frequencies 546
106. Predictive Estimation of Frequencies 550
A. Theorems on Predictive Estimation of Frequencies (550)—*B*. The

Limit of Relative Frequency in an Infinite Class (552)—*C*. The Problem of the Reliability of a Value of Degree of Confirmation (554)

107. Further Theorems on Predictive Estimation of Relative Frequency 555
A. Frequencies of *Q*-Properties (556)—*B*. The Problem of the Null Evidence (557)—*C*. Further Theorems on the Estimate of Relative Frequency (559)—*D*. The Inverse Estimation of Frequency (560)

APPENDIX 562

110. Outline of a Quantitative System of Inductive Logic 562
A. The Function c^* (562)—*B*. The Direct Inference (567)—*C*. The Predictive Inference (567)—*D*. The Inference by Analogy (569)—*E*. The Inverse Inference (570)—*F*. The Universal Inference (570)—*G*. The Instance Confirmation of a Law (571)—*H*. Are Laws Needed for Making Predictions? (574)—*I*. The Variety of Instances (575)—*J*. Inductive Logic as a Rational Reconstruction (576)
