CONTENTS

CHAPTER I:
Introduction and preliminaries

1.1. Introductory remarks 1
1.2. Preliminaries and notation 5
1.3. Languages, Syntax 10
1.4. Some basic systems 16
1.5. Some systems of analysis 25

CHAPTER II:
A review of Gentzen's second consistency proof

2.1. Some preliminary notions 34
2.2. The reduction steps 39
2.3. Properties of reduction steps 48
2.4. Assignement of ordinals to proofs 50
2.5. A generalization 53

CHAPTER III:
The intuitionistic system of number theory

3.1. Elimination of forks in intuitionistic proofs 70
3.2. A basic lemma 74

CHAPTER IV:
A formally intuitionistic system as strong as classical analysis

4.1. A conservative extension of ZT/II_N 79
4.2. Reduction steps 85
4.3. Ordinals 91
4.4. The system $ZTEi/II_N$ 94
4.5. Applications 105
4.6. The system ZTi/II and its conservative extension $ZTEi/II$ 121
4.7. Some remarks on the proof theoretic treatment of $ZTEi/II_N$ and $ZTEi/II$ 133

CHAPTER V:

Transfinite induction with respect to recursive wellorderings without function parameters

5.1. A conservative extension of ZTi/IV_N 141
5.2. Reduction steps. 148
5.3. Ordinals 153
5.4. The wellfoundedness proof 159
5.5. Remarks on applications 160

CHAPTER VI:

A formally intuitionistic theory equivalent to classical transfinite induction with respect to primitive recursive wellfounded trees with function parameters

6.1. Some preparations 161
6.2. Conservative extensions of ZT/V and ZTi/V 164
6.3. A generalization of the basic lemma 169
6.4. Reduction steps 171
6.5. Ordinals 186
6.6. The wellfoundedness proof 189

CHAPTER VII:

A system containing bar induction with respect to decidable predicates

7.1. The theory ZTi/I and a certain conservative extension 193
7.2. Remarks about the basic lemma 196
7.3. Reduction steps for ZTGi/I 197
7.3a. Good proofs 201
7.4. Valuation of proofs 202
7.5. Ordinals 212
7.6. The wellfoundedness proof 215
7.7. Remarks on applications 216

CHAPTER VIII:

Harrop formulas

8.1. Intuitionistic number theory and Harrop formulas . . . 217
8.2. Harrop formulas and the theories ZTi/II_N and $ZTEi/II_N$ 227
8.3. Harrop formulas and the theories ZTi/II and ZTEi/II 234
8.4. Harrop formulas and the theories ZTi/I and ZTGi/I . 235
8.5. The theories ZTi/IV_N and ZTi/IV 245

CHAPTER IX:

The Markov principle

9.1. The Markov principle 248
9.2. Markov principle and weak Harrop property 249
9.3. The Markov principle and some particular intuitionistic theories 250
9.4. Markov principle and the theory of Kleene-Vesley . . . 253

CHAPTER X:

Relative consistency proof of ZT/V with respect to ZTi/I^*_N

10.1. Preliminary remarks 256
10.2. Remarks about transfinite induction in ZTi/I^*_N 257
10.3. Syntax of ZTi/V 260
10.4. Ordinals 261
10.5. On extending linear wellorderings 265
10.6. Cartesian products of ordering pairs 273
10.7. The ε-construction 275
10.8. Direct sums of ordering pairs 277
10.9. One one mappings of ordering pairs 278
10.10. A particular ε-construction 279
10.11. An ordinal assignment 281
10.12. The wellfoundedness proof 285
10.13. Applications 289
