

CONTENTS

1.	Jon Barwise, <u>Implicit definability and compactness in infinitary languages</u>	1
2.	C. C. Chang, <u>Some remarks on the model theory of infinitary languages</u>	36
3.	Erwin Engeler, <u>Remarks on the theory of geometrical constructions</u>	64
4.	Harvey Friedman and Ronald Jensen, <u>Note on admissible ordinals</u>	77
5.	Carol Karp, <u>An algebraic proof of the Barwise compactness theorem</u>	80
6.	H. J. Keisler, <u>Formulas with linearly ordered quantifiers</u>	96
7.	R. D. Kopperman and A. R. D. Mathias, <u>Some problems in group theory</u>	131
8.	G. Kreisel, <u>Choice of infinitary languages by means of definability criteria; Generalized recursion theory</u>	139
9.	David W. Kueker, <u>Definability, automorphisms, and infinitary languages</u>	152
10.	Jerome Malitz, <u>The Hanf number for complete $L_{\omega_1, \omega}$ sentences</u>	166
11.	A. Preller, <u>Quantified algebras</u>	182
12.	W. W. Tait, <u>Normal derivability in classical logic</u>	204
13.	Gaisi Takeuti, <u>A determinate logic</u>	237
14.	Joseph Weinstein, <u>(ω_1, ω) properties of unions of models</u>	265
