Glossary of notation	xi
1. The multiplicity of logics	1
1.1 The province of logic	1
1.2 The development of the concept of deductive science	5
1.3 Criticisms of the positivist view	8
1.4 The science of logics	12
1.5 Logics	14
2. Classical logic	16
2.1 Introduction	16
2.2 Propositional logic	19
2.3 Predicate logic	38
3. Abstract logics	58
3.1 Introduction	58
3.2 Prelogics	59
3.3 Conditions on prelogics	65
3.4 Transfer principles	69
3.5 Logics	75
3.6 Closed sets	79
3.7 Logical operations	82
3.8 Compact logics	89
3.9 Formal systems and combinatorial systems	93
3.10 Finite logics	96
3.11 Gentzen systems	98
3.12 Comparison of logics	102
4. Logical operations	105
4.1 Connectives	105
4.2 The historical connectives	106
4.3 Relations between connectives	125
4.4 Quantifiers	129
4.5 Quantifiers and connectives	132

5. Order and lattices	136
5.1 Introduction	136
5.2 Relations	136
5.3 Equivalence relations	140
5.4 Abstraction	142
5.5 Order	145
5.6 Upper and lower bounds	151
5.7 Lattices	155
5.8 Complete lattices	161
5.9 Various kinds of lattices	163
5.10 Complemented lattices	175
6. Constructing logics	193
6.1 Introduction	193
6.2 Many-valued logics	193
6.3 Logics from truth-values	195
6.4 Logics from lattices	199
6.5 Logical consequence in classical logic	202
6.6 Logical consequence in semantic logics	204
6.7 Functionally free algebras	208
6.8 The logic of quantum mechanics	209
6.9 Predicate logics	212
6.10 Temporal logics	218
6.11 Model structures	225
7. Quasi-Boolean algebras and empirical continuity	228
7.1 Introduction	228
7.2 Quasi-Boolean algebras	228
7.3 Constructing quasi-Boolean algebras	230
7.4 The boundary elements of a quasi-Boolean algebra	233
7.5 Quasi-Boolean algebras in relation to Boolean algebras	235
7.6 The structure of quasi-Boolean algebras	238
7.7 Inexact classes and predicates	243
7.8 Empirical continuity	247
8. Three-valued logic	253
8.1 Introduction	253
8.2 The classical imperative	253
8.3 Sources of the third truth-value	255
8.4 The logics of truth-values	257
8.5 The continuity principle for truth-values	258

8.6	N_3 propositional calculus	263
8.7	Normal forms and the analysis of implications	268
8.8	The nucleus of $\mathfrak{L}[N_3]$	272
8.9	Connectivity and continuity in $\mathfrak{L}[N_3]$	274
8.10	Three-valued predicate calculus	275
9.	Relevance	286
9.1	Introduction	286
9.2	Rigid propositions	288
9.3	Minimal implications	298
9.4	A semantic method	305
10.	The calculus of logics: effective logic	309
10.1	Introduction	309
10.2	Effective extension of a logic	312
10.3	The cut condition	316
10.4	The triviality condition	324
10.5	Regular junctors and effective positive logic	326
10.6	Negation in effective logic	328
10.7	Effective quantifier logics	330
10.8	Effective, intuitionistic, and classical logics	339
10.9	Brouwer's intuitionism	341
10.10	Bishop's constructivism	353
10.11	Other kinds of constructivism	356
11.	Modal logics	360
11.1	Introduction	360
11.2	Necessity and logic	363
11.3	Relative necessity	365
11.4	Constructing a classical modal logic	367
11.5	Axiomatizability of theories of necessity	372
11.6	Axiomatization of the general theory of necessity	374
11.7	Effective modal logics	377
11.8	Deontic logic	385
