Preface xi

Chapter 1. The Formalism $\mathcal{L}$ of Predicate Logic 1
- 1.1. Preliminaries 1
- 1.2. Symbols and expressions of $\mathcal{L}$ 4
- 1.3. Derivability in $\mathcal{L}$ 7
- 1.4. Semantical notions of $\mathcal{L}$ 11
- 1.5. First-order formalisms 14
- 1.6. Formalisms and systems 16

Chapter 2. The Formalism $\mathcal{L}^+$, a Definitional Extension of $\mathcal{L}$ 23
- 2.1. Symbols and expressions of $\mathcal{L}^+$ 23
- 2.2. Derivability and semantical notions of $\mathcal{L}^+$ 25
- 2.3. The equipollence of $\mathcal{L}^+$ and $\mathcal{L}$ 27
- 2.4. The equipollence of a system with an extension 30
- 2.5. The equipollence of two systems relative to a common extension 41

Chapter 3. The Formalism $\mathcal{L}^\times$ without Variables and the Problem of Its Equipollence with $\mathcal{L}$ 45
- 3.1. Syntactical and semantical notions of $\mathcal{L}^\times$ 45
- 3.2. Schemata of equations derivable in $\mathcal{L}^\times$ 48
- 3.3. A deduction theorem for $\mathcal{L}^\times$ 51
- 3.4. The inequipollence of $\mathcal{L}^\times$ with $\mathcal{L}^+$ and $\mathcal{L}$ 53
- 3.5. The inequipollence of extensions of $\mathcal{L}^\times$ with $\mathcal{L}^+$ and $\mathcal{L}$ 56
- 3.6. $\mathcal{L}^\times$-expressibility 62
- 3.7. The three-variable formalisms $\mathcal{L}_3$ and $\mathcal{L}_3^+$ 64
- 3.8. The equipollence of $\mathcal{L}_3$ and $\mathcal{L}_3^+$ 72

3.9. The equipollence of $\mathcal{L}^{\times}$ and $\mathcal{L}_3^+$ 76
3.10. Subformalisms of $\mathcal{L}$ and $\mathcal{L}^+$ with finitely many variables 89

Chapter 4. The Relative Equipollence of $\mathcal{L}$ and $\mathcal{L}^{\times}$, and the Formalization of Set Theory in $\mathcal{L}^{\times}$ 95
4.1. Conjugated quasiprojections and sentences $\boldsymbol{Q}_{AB}$ 95
4.2. Systems of conjugated quasiprojections and systems of predicates $\boldsymbol{P}_{AB}$ 100
4.3. Historical remarks regarding the translation mapping from $\mathcal{L}^+$ to $\mathcal{L}^{\times}$ 107
4.4. Proof of the main mapping theorem for $\mathcal{L}^{\times}$ and $\mathcal{L}^+$ 110
4.5. The construction of equipollent Ω-systems in $\mathcal{L}^{\times}$ 124
4.6. The formalizability of systems of set theory in $\mathcal{L}^{\times}$ 127
4.7. Problems of expressibility and decidability in $\mathcal{L}^{\times}$ 135
4.8. The undecidability of first-order logics with finitely many variables, and the relative equipollence of $\mathcal{L}_3$ with $\mathcal{L}$ 140

Chapter 5. Some Improvements of the Equipollence Results 147
5.1. One-one translation mappings 147
5.2. Reducing the number of primitive notions of $\mathcal{L}^{\times}$: definitionally equivalent variants of $\mathcal{L}^{\times}$ 151
5.3. Eliminating the symbol $\mathring{\mathbf{1}}$ as a primitive notion from systems of set theory in $\mathcal{L}^{\times}$ 153
5.4. Eliminating the symbol $=$ as a primitive notion from $\mathcal{L}^{\times}$: the reduced formalism $\mathcal{L}_r^{\times}$ 158
5.5. Undecidable subsystems of sentential logic 165

Chapter 6. Implications of the Main Results for Semantic and Axiomatic Foundations of Set Theory 169
6.1. Denotation and truth in $\mathcal{L}^{\times}$ 169
6.2. The denotability of first-order definable relations in Ω-structures 170
6.3. The $\mathcal{L}^{\times}$-expressibility of certain relativized sentences 174
6.4. The finite axiomatizability of predicative systems of set theory admitting proper classes 177
6.5. The finite axiomatizability of predicative systems of set theory excluding proper classes 187

Chapter 7. Extension of Results to Arbitrary Formalisms of Predicate Logic, and Applications to the Formalization of the Arithmetics of Natural and Real Numbers 191
7.1. Extension of equipollence results to Ω-systems in first-order formalisms with just binary relation symbols 191

7.2. Extension of equipollence results to weak Ω-systems in arbitrary first-order formalisms 200
7.3. The equipollence of weak Ω-systems with finite variable subsystems 208
7.4. Comparison of equipollence results for strong and weak Ω-systems 214
7.5. The formalizability of the arithmetic of natural numbers in $\mathcal{L}^{\times}$ 215
7.6. The formalizability of Peano arithmetic in $\mathcal{L}^{\times}$, and the definitional equivalence of Peano arithmetic with a system of set theory 222
7.7. The formalizability of the arithmetic of real numbers in $\mathcal{L}^{\times}$ 226
7.8. Remarks on first-order formalisms with limited vocabularies 229

Chapter 8. Applications to Relation Algebras and to Varieties of Algebras 231
8.1. Equational formalisms 231
8.2. Relation algebras 235
8.3. Representable relation algebras 239
8.4. Q-relation algebras 242
8.5. Decision problems for varieties of relation algebras 251
8.6. Decision problems for varieties of groupoids 258
8.7. Historical remarks regarding the decision problems 268
