Contents

PART ONE LANGUAGE

Chapter 1 Introduction 3

1.1 What Is Logic? 3
1.2 Premisses and Conclusions 6
1.3 Passages Containing Several Arguments 15
1.4 Recognizing Arguments 22
1.5 Deduction and Induction 32
1.6 Truth and Validity 41

Chapter 2 The Uses of Language 55

2.1 Three Basic Functions of Language 55
2.2 Discourse Serving Multiple Functions 59
2.3 The Forms of Discourse 61
2.4 Emotive Words 70
2.5 Kinds of Agreement and Disagreement 73
2.6 Emotively Neutral Language 81

Chapter 3 Informal Fallacies 86

3.1 Classification of Fallacies 86
3.2 Fallacies of Relevance 87
3.3 Fallacies of Ambiguity 110
3.4 The Avoidance of Fallacies 119

Chapter 4 Definition 126

4.1 Five Purposes of Definition 126
4.2 Verbal Disputes and Definition 131
4.3 Five Types of Definition 135
4.4 Various Kinds of Meaning 142
4.5 Techniques for Defining 147
4.6 Rules for Definition by Genus and Difference 154

***PART TWO* DEDUCTION**

Chapter 5 Categorical Propositions 165

5.1 Categorical Propositions and Classes 165
5.2 Quality, Quantity, and Distribution 169
5.3 The Traditional Square of Opposition 173
5.4 Further Immediate Inferences 178
5.5 Existential Import 187
5.6 Symbolism and Diagrams for Categorical Propositions 191

Chapter 6 Categorical Syllogisms 198

6.1 Standard-Form Categorical Syllogisms 198
6.2 The Formal Nature of Syllogistic Argument 202
6.3 Venn Diagram Technique for Testing Syllogisms 205
6.4 Rules and Fallacies 215

Chapter 7 Arguments in Ordinary Language 224

7.1 Reducing the Number of Terms in a Syllogistic Argument 224
7.2 Translating Categorical Propositions into Standard Form 228
7.3 Uniform Translation 234
7.4 Enthymemes 241
7.5 Sorites 246
7.6 Disjunctive and Hypothetical Syllogisms 249
7.7 The Dilemma 255

Chapter 8 Symbolic Logic 263

8.1 The Value of Special Symbols 263
8.2 The Symbols for Conjunction, Negation, and Disjunction 265
8.3 Conditional Statements and Material Implication 277
8.4 Argument Forms and Arguments 288
8.5 Statement Forms and Statements 300
8.6 The Paradoxes of Material Implication 305
8.7 The Three "Laws of Thought" 306

Chapter 9 The Method of Deduction 309

9.1 Formal Proof of Validity 309
9.2 The Rule of Replacement 318
9.3 Proof of Invalidity 330
9.4 Inconsistency 332

Chapter 10 Quantification Theory 340

10.1 Singular Propositions 340
10.2 Quantification 343
10.3 Traditional Subject–Predicate Propositions 346
10.4 Proving Validity 353
10.5 Proving Invalidity 361
10.6 Asyllogistic Inference 366

***PART THREE* INDUCTION**

Chapter 11 Analogy and Probable Inference 377

11.1 Argument by Analogy 377
11.2 Appraising Analogical Arguments 386

Chapter 12 Causal Connections: Mill's Methods of Experimental Inquiry 399

12.1 The Meaning of "Cause" 399
12.2 Mill's Methods 406
12.3 Criticisms of Mill's Methods 431
12.4 Vindication of Mill's Methods 437

Chapter 13 Science and Hypothesis 458

13.1 The Values of Science 458
13.2 Explanations: Scientific and Unscientific 461

13.3 Evaluating Scientific Explanations 467
13.4 The Detective as Scientist 472
13.5 Scientists in Action: The Pattern of Scientific Investigation 481
13.6 Crucial Experiments and Ad Hoc Hypotheses 486
13.7 Classification as Hypothesis 492

Chapter 14 Probability 510

14.1 Alternative Conceptions of Probability 510
14.2 The Probability Calculus 514
14.3 Expectation or Expected Value 525

Solutions to Selected Exercises 531

Special Symbols 572

Index 573
