

# CONTENTS

Preface . . . . .	v
<b>CHAPTER I LINGUISTIC CONCEPTS</b>	
1 Mathematics as a Language . . . . .	1
2 Constants . . . . .	3
3 Variables . . . . .	6
4 Forms . . . . .	9
5 Statements . . . . .	14
6 Terms and Formulae . . . . .	17
7 Talking about a Formal Object Language . . . . .	19
<b>CHAPTER II LOGICAL CONCEPTS</b>	
8 Negation and Implication . . . . .	23
9 Connectives . . . . .	28
10 Quantifiers . . . . .	31
11 Tautologies and Logical Equivalence . . . . .	36
12 The Manipulation of Connectives . . . . .	41
13 The Manipulation of Quantifiers . . . . .	44
<b>CHAPTER III DEDUCTIVE REASONING</b>	
14 The Basis of a Formal Language . . . . .	49
15 Substitutions . . . . .	53
16 The Axiomatic Method . . . . .	60
17 Formal Deduction . . . . .	64
18 Derived Rules of Inference and Methods of Deduction . . . . .	69
<b>CHAPTER IV AXIOMATIC SET-THEORY</b>	
19 The Language of Set-Theory . . . . .	75
20 Equality and Extensionality . . . . .	80
21 Separation Sets and Finite Sets . . . . .	85
22 Intersection and Union . . . . .	91
23 Inclusion . . . . .	98
24 The Algebra of Sub-Sets . . . . .	104
25 The Natural Numbers . . . . .	112
26 Power Sets and Cartesian Products . . . . .	118

**CHAPTER V THE THEORY OF RELATIONS AND FUNCTIONS**

27	Relations . . . . .	125
28	Equivalence Relations . . . . .	131
29	Order Relations . . . . .	138
30	Functions . . . . .	144
31	Equality, Composition and Inversion of Functions . . . . .	151
32	Equipollence and Isomorphism . . . . .	160
33	Further Development of Set-Theory . . . . .	168
	Answers to Exercises . . . . .	175
	List of Symbols . . . . .	249
	List of Set-Theoretical Terms and Formulae . . . . .	251
	Index . . . . .	253
