

TABLE OF CONTENTS

PREFACE	xi
ABBREVIATIONS FOR WORKS OF HUSSERL	xv
CHAPTER 1. THE CONCEPT OF INTUITION IN MATHEMATICS	1
1. Introduction	1
2. Knowledge, Evidence, and Intuition	2
3. Intuition “of” and Intuition “that”	5
4. Some Recent Views of Mathematical Intuition	6
5. Hilbert and Bernays	6
6. Parsons	8
7. Brouwer	12
8. Some “Extended” Proof-Theoretic Views	13
9. Gödel on Sets	14
10. Platonism and Constructivism	16
11. Mathematical Truth and Mathematical Knowledge	17
12. Principal Objections to Mathematical Intuition	18
CHAPTER 2. THE PHENOMENOLOGICAL VIEW OF INTUITION	21
1. Introduction	21
2. Intentionality and Intuition	22
3. Intuition of Abstract Objects	25
4. Acts of Abstraction and Abstract Objects	31
5. Acts of Reflection	36
6. Types and Degrees of Evidence	38
7. Comparison with Kant	43
8. Intuition and the Theory of Meaning	45

CHAPTER 3. PERCEPTION	48
1. Introduction	48
2. Sequences of Perceptual Acts	49
3. The Horizon of Perceptual Acts	51
4. The Possibilities of Perception	56
5. The "Determinable X" in Perception and Indexicals	58
6. Perceptual Evidence	61
7. Phenomenological Reduction and the Problem of Realism / Idealism	63
CHAPTER 4. MATHEMATICAL INTUITION	66
1. Introduction	66
2. Objections About Analogies Between Perceptual and Mathematical Intuition	67
3. Objections Based on Structuralism	71
4. Objections About Founding	75
5. A Logic Compatible With Mathematical Intuition and the Notion of Construction	79
6. Is Classical Mathematics to be Rejected?	89
CHAPTER 5. NATURAL NUMBERS I	92
1. Introduction	92
2. The Concept of Number Cannot Be Explicitly Defined	93
3. The Origin of the Concept of Number	96
4. Intuition of Natural Numbers	99
5. Ordinals	101
6. Ordinals and Cardinals	105
7. Constructing Units and the Role of Reflection and Abstraction	111
8. Syntax and Representations of Numbers	116
CHAPTER 6. NATURAL NUMBERS II	119
1. Introduction	119
2. 0 and 1	121
3. Numbers Formed by Arithmetic Operations	122
4. Small Numbers and Singular Statements About Them	124
5. Large Numbers and Mathematical Induction	128
6. The Possibilities of Intuition	131
7. Summary of the Argument for Large Numbers	135
8. Further Comments on Mathematical Induction	137

9. Intuition and Axioms of Elementary Number Theory	140
CHAPTER 7. FINITE SETS	143
1. Introduction	143
2. A Theory of Finite Sets	145
3. The Origin of the Concept of Finite Set	147
4. Intuition of Finite Sets	153
5. Comparison with Gödel and Wang	156
6. Unit Sets, the Empty Set, and Mereology vs. Set Theory	161
7. Large Sets and a Hierarchy of Sets	164
8. Illusion in Set Theory	169
9. Concluding Remarks	170
CHAPTER 8. CRITICAL REFLECTIONS AND CONCLUSION	172
1. Introduction	172
2. Summary of the Account	172
3. Areas for Further Work	175
4. Platonism, Constructivism, and Benacerraf's Dilemma	177
NOTES	183
BIBLIOGRAPHY	194
INDEX	201
