	Introduction	v
CHAPTER I	Syntactic approach: the calculi L' and L''	1
	1 The propositional calculus L' 1	
	Symbolism 1	
	Sentences 2	
	Axioms, provable sentences 8	
	2 The predicate calculus L'' 13	
	Symbolism 13	
	Sentences and formulas 14	
	Axioms, provable sentences 19	
CHAPTER II	Semantic approach: problems of consistency	26
	1 The concept of interpretation 26	
	Systems of truth values 29	
	Consistency theorems 32	
	Problems of independence 34	
CHAPTER III	Set-theoretic approach: concepts of deducibility	38
	1 Different concepts of deducibility 38	
	Sentence deducible from another sentence 38	
	Sentence deducible from hypotheses 39	
	Global deducibility 46	
	2 Deductive systems 52	
	Consistent subsets 52	
	Deductive systems—complete deductive systems 54	
	Truth sets 57	
CHAPTER IV	Completeness of the propositional calculus	60
	1 First (semantic) completeness theorem 60	
	2 Second (syntactic) completeness theorem 64	

- 3 Third (syntactic) completeness theorem 65
 4 Note on the operators T, Σ, S 67

CHAPTER V	Algebraic approach: structure of Boolean rings	70
	1 Binary operations in E/R	70	
	Specific properties of the calculus L''	76	
	2 General theory of Boolean rings	77	
	Filters and ultrafilters	80	
	3 Stone's representation theorem	84	
	4 Application to logical calculi	85	
CHAPTER VI	Topological approach: structure of Boolean spaces	91
	1 General theory of Boolean spaces	91	
	Boolean ring and Boolean space as dual concepts	94	
	2 Applications to propositional calculus	97	
CHAPTER VII	Problems of completeness in the predicate calculus	101
	1 More about truth sets	101	
	2 Topological properties (Baire spaces)	104	
	3 Semantic completeness theorem	106	
	4 Various classical forms of the theorem	107	
	5 The Löwenheim-Skolem theorem	111	
CHAPTER VIII	Predicate calculus with equality	117
	1 The concept of J -equality	117	
	2 Predicate calculus with equality (or calculus L'_e)	118	
	3 Relations between the calculi L'' and L'_e	121	
	4 Completeness theorem	122	
	References	125
	List of symbols	126
