Preface to the German edition	v
Translator's preface to the English edition	
A. General	vii
B. Abelard	viii

PART I

Introduction

§ 1. <i>The concept of formal logic</i>	2
§ 2. <i>On the history of the history of logic</i>	4
A. The beginnings	4
B. Prejudices	4
1. Thomas Reid	5
2. Kant	6
3. Prantl	6
4. After Prantl	8
C. Research in the 20th century	9
§ 3. <i>The evolution of formal logic</i>	10
A. Concerning the geography and chronology of logic	10
B. How logic evolved	12
C. The varieties of logic	12
D. The unity of logic	14
E. The problem of progress	15
§ 4. <i>Method and plan</i>	18
A. History of problems, and documentation	18
B. Plan of the work	18
C. Character of the contents	19
§ 5. <i>Terminology</i>	20
A. Technical expressions	20
B. Concerning mathematico-logical symbolism	22
C. Typographical conventions	23

PART II

The Greek Variety of Logic

§ 6. <i>Introduction to Greek logic</i>	26
A. Logicians in chronological order	26
B. Periods	27
C. State of research	27

CONTENTS

I. The precursors

§ 7. <i>The beginnings</i>	29
A. Texts	29
B. Significance	31
§ 8. <i>Plato</i>	33
A. Concept of logic	33
B. Approaches to logical formulae	34
C. Diaeresis	35

II. Aristotle

§ 9. <i>The work of Aristotle and the problems of its literary history</i>	40
A. Works	40
B. Problems	40
1. Authenticity	40
2. Character	41
3. Chronology	41
	44
§ 10. <i>Concept of logic. Semiotic</i>	44
A. Name and place of logic	44
B. The subject-matter of logic	44
C. Syntax	46
D. Semantics	47
	49
§ 11. <i>The topics</i>	49
A. Subject and purpose	49
B. Predicables	51
C. Categories	53
D. Sophistic	54
§ 12. <i>Theory of opposition; principle of contradiction; principle of tertium exclusum</i>	57
A. Theory of opposition	57
B. Obversion	59
C. The principle of contradiction	60
D. The principle of <i>tertium exclusum</i>	62
	63
§ 13. <i>Assertoric syllogistic</i>	64
A. Text	64
B. Interpretation	66
C. Structure of the syllogism	69
D. The figures and further syllogisms	70
	72
§ 14. <i>Axiomatization of the syllogistic. Further laws</i>	72
A. Axiomatic theory of the system	72
B. Systems of syllogistic	75
C. Direct proof	76
D. Indirect proof	77
E. <i>Dictum de omni et nullo</i>	79
F. Beginnings of a metalogical system	80
G. The <i>inventio medii</i>	80
	81
§ 15. <i>Modal logic</i>	81
A. Modalities	81
B. Structure of modal sentences	83
C. Negation and conversion	84
D. Syllogisms	85
	88
§ 16. <i>Non-analytic laws and rules</i>	89
A. Two kinds of inference	89
B. Laws of class- and predicate-logic	91
C. Theory of identity	92
D. Syllogisms from hypotheses	93
E. Laws of the logic of relations	95
F. Propositional rules and laws	97
	98
Summary	98

CONTENTS

§ 17. <i>Theophrastus</i>	99
A. Development and alteration of various doctrines	99
B. Modal logic	101
C. Hypothetical syllogisms	103
III. The Megarian-Stoic School	
§ 18. <i>Historical survey</i>	105
A. Thinkers and schools	105
B. Problems of literary history	107
C. Origin and nature	108
§ 19. <i>Concept of logic. Semiotics. Modalities</i>	109
A. Logic	109
B. Lecta	110
C. Syntax	111
D. Doctrine of categories	113
E. Truth	114
F. Modalities	114
§ 20. <i>Propositional functors</i>	115
A. Negation	116
B. Implication	116
1. Philonian implication	117
2. Diodorean implication	117
3. 'Connexive' implication	118
4. 'Inclusive' implication	119
C. Disjunction	119
1. Complete disjunction	119
2. Incomplete disjunction	120
D. Conjunction	121
E. Equivalence	121
F. Other functors	121
§ 21. <i>Arguments and schemes of inference</i>	122
A. Conclusive, true and demonstrative arguments	122
B. Non-syllogistic arguments	124
C. Further kinds of argument	124
D. Schemes of inference	125
§ 22. <i>Axiomatization. Compound arguments</i>	126
A. The indemonstrables	126
B. Metatheorems	127
C. Derivation of compound arguments	128
D. Further derived arguments	130
§ 23. <i>The liar</i>	130
A. History	131
B. Formulation	131
C. Efforts at solution	132
IV. The Close of Antiquity	
§ 24. <i>Period of commentaries and handbooks</i>	134
A. Characteristics and historical survey	134
B. The tree of Porphyry	135
C. Extension of logical technique	136
D. Fresh division of implication	137
E. Boethius's hypothetical syllogisms	139
F. Alterations and development of the categorical syllogistic	140
G. The supposedly fourth figure	141
H. Pons asinorum	143
I. Anticipation of the logic of relations	144
Summary	144

CONTENTS

PART III

The Scholastic Variety of Logic

§ 25.	<i>Introduction to scholastic logic</i>	148
	A. State of research	148
	B. Provisional periods	148
	C. The problem of sources	150
	D. Logic and the schools	150
	E. Method	151
	F. Characteristics	152
I. Semiotic foundations		
§ 26.	<i>Subject-matter of logic</i>	153
	A. Basic notions of semiotics	154
	B. Logic as a theory of second intentions.	156
	C. Formal logic as a theory of syncategorematic expressions	159
	D. Content of the works	162
§ 27.	<i>Supposition</i>	163
	A. Concept of supposition	164
	B. Material and formal supposition	168
	C. Simple supposition	171
	D. Personal supposition	173
	E. Interpretation in modern terms	173
§ 28.	<i>Ampliation, appellation, analogy</i>	173
	A. Ampliation	175
	B. Appellation	177
	C. Analogy	180
§ 29.	<i>Structure and sense of propositions</i>	180
	A. Division of propositions	180
	B. Analysis of propositions	182
	C. Analysis of modal propositions: dictum and modus	184
	D. Composite and divided senses	187
	E. Reference of propositions	187
II. Propositional Logic		
§ 30.	<i>Notion and division of consequences</i>	189
	A. Historical survey	189
	B. Definition of consequence	190
	C. Division of consequences	191
	D. Meaning of implication	195
	E. Disjunction	197
§ 31.	<i>Propositional consequences</i>	198
	A. Hypothetical propositions	198
	B. Kilwardby.	198
	C. Albert of Saxony	199
	D. Paul of Venice	205
	E. Rules of consequences ut nunc	208
III. Logic of Terms		
§ 32.	<i>Assertoric syllogistic</i>	210
	A. Early mnemonics	210
	B. Barbara-Celarent	211
	C. Barbara-Celarent	215
	D. The fourth figure	216
	1. Among the Latins	216
	2. In Albalag	217
	E. Combinatorial method	219
	F. Inventio medii, pons asinorum	219

CONTENTS

G. The problem of the null class	221
1. St. Vincent Ferrer	221
2. Paul of Venice	223
3. John of St. Thomas	223
§ 33. <i>Modal syllogistic</i>	224
A. Albert the Great	224
B. Pseudo-Scotus	225
C. Ockham	227
D. Logic of propositions in future and past tenses	230
§ 34. <i>Other formulae</i>	231
A. Syllogisms with singular terms	232
B. Analysis of 'every' and 'some'	234
C. Exponible propositions	234
D. Oblique syllogisms	236
§ 35. <i>Antinomies</i>	237
A. Development	237
B. Formulation	239
1. The liar	239
2. Other antinomies	240
C. Solutions	241
1. The first twelve solutions	241
2. The thirteenth solution	244
3. The fourteenth solution	246
4. Preliminaries to the solution of Paul of Venice	247
5. The solution of Paul of Venice	249
Summary	251

PART IV

Transitional Period

§ 36. <i>The 'classical' logic</i>	254
A. Humanism	254
B. Content	256
C. Psychologism	257
D. Leibniz	258
E. Comprehension and extension	258
F. The fourth figure and subaltern moods	259
G. Syllogistic diagrams	260
H. Quantification of the predicate	262

PART V

The Mathematical Variety of Logic

I. General Foundations

§ 37. <i>Introduction to mathematical logic</i>	266
A. Characteristics	266
B. Chronological sequence	267
C. Frege	268
D. Periods	269
E. State of research	270
F. Method	271
§ 38. <i>Methods of mathematical logic</i>	272
A. Logical calculus	272
1. Lull	272
2. Hobbes	273
3. Leibniz	274

CONTENTS

	4. Lambert	276
	5. Gergonne	277
	6. Boole	278
	7. Peirce	279
	B. Theory of proof	280
	1. Bolzano	280
	2. Frege	282
	C. Metalogic	284
§ 39.	<i>The concept of logic</i>	286
	A. The logistic position	287
	1. Frege: semantics	287
	2. Frege: logic and mathematics	289
	3. Russell	290
	4. Frege: number	291
	B. Formalism	292
	C. Intuitionism	293
II. The First Period		
§ 40.	<i>The Boolean calculus</i>	296
	A. De Morgan	296
	B. Boole	298
	1. Symbolism and basic concepts	298
	2. Applications	301
	C. The logical sum	302
	D. Inclusion	303
	E. Peano	306
III. Propositional Logic		
§ 41.	<i>Propositional logic: basic concepts and symbolism</i>	307
	A. Boole	307
	B. McColl	309
	C. Frege	310
	1. Content and judgment	310
	2. Implication	311
	D. Peirce	313
	E. Applications of his symbolism by Frege	314
	F. Negation and sum in Frege	316
	G. Peano's symbolism for propositional logic	317
	H. Later development of symbolism for propositional logic	318
§ 42.	<i>Function, variable, truth-value</i>	319
	A. Logical form	320
	B. Concept of function: Frege	320
	C. Propositional function: Russell	322
	D. Many-place functions	323
	E. The variable	325
	1. Frege	325
	2. Russell	326
	F. Truth-values	327
	G. Truth-matrices	330
	1. Peirce	330
	2. Wittgenstein	331
	H. Decision procedure of Łukasiewicz	333
§ 43.	<i>Propositional logic as a system</i>	335
	A. McColl	335
	B. Frege's rules of inference	337
	C. Propositional laws from the Begriffsschrift	338
	D. Whitehead and Russell	340
	1. Primitive symbols and definition	340

CONTENTS

	2. Axioms (primitive propositions)	340
	3. Statement of proofs	341
	4. Laws	342
	E. Sheffer's functor	344
	F. Łukasiewicz's statement of proofs	345
IV. Logic of Terms		
§ 44.	<i>Predicate logic</i>	347
	A. Quantifiers	348
	1. Mitchell	348
	2. Peirce	348
	3. Peano	349
	4. Frege	350
	B. Apparent variables	353
	1. Peano	353
	2. Whitehead and Russell	353
	C. Formal implication	354
	D. Laws of one-place predicates	355
	E. Laws of many-place predicates	356
	F. Identity	357
§ 45.	<i>The logic of classes</i>	359
	A. Individual and class. Concept of element	360
	B. Meaning and extension	360
	C. The plural article	362
	D. Definition of classes by functions	363
	E. Product and inclusion of classes	364
§ 46.	<i>Existence</i>	365
	A. The null class	365
	B. Null class and assertoric syllogistic	366
	C. Description	367
	1. The definite article: Frege	367
	2. Logical existence	369
	3. Description in Russell	371
	4. Symbolism	373
	(a) Peano	373
	(b) Principia	374
V. Other Doctrines		
§ 47.	<i>Logic of relations</i>	375
	A. Laying the foundations	375
	1. De Morgan	375
	2. Peirce	377
	3. Russell	379
	4. Principia	380
	B. Series	384
	1. Frege	385
	2. Principia	385
	C. Isomorphy	386
§ 48.	<i>Antinomies and theories of types</i>	387
	A. Historical survey	387
	B. The antinomies	388
	C. Anticipations of the theory of types	391
	D. The ramified theory of types	393
	E. Systematic ambiguity	396
	F. The axiom of reducibility	398
	G. Simple theory of types	399
	1. Chwistek	399
	2. Ramsey	400

CONTENTS

§ 49.	Some recent doctrines	402
	A. Strict implication: Lewis	403
	B. Many-valued logics: Łukasiewicz	405
	C. Gödel's theorem	407
	D. Combinatory logic	411
Summary		412

PART VI

The Indian Variety of Logic

§ 50.	Introduction to Indian logic	416
	A. Historical survey	416
	B. Evolution of formal logic	417
	C. State of research	419
	D. Method	420
§ 51.	The precursors	421
	A. Milinda-Pañha	421
	B. Kathāvatthu	421
	C. The ten-membered formula	423
§ 52.	Vaiśeṣika- and Nyāya-sūtra	425
	A. Vaiśeṣika-sūtra	425
	1. Doctrine of categories	425
	2. Inference	426
	B. Nyāya-sūtra	426
	1. Text	426
	2. Vātsyāyana's commentary	428
	3. Interpretation	429
§ 53.	The rise of formal logic	431
	A. Main stages of development	431
	B. Terminology	432
	C. The three-membered syllogism	433
	D. The three-membered rule: <i>trairūpya</i>	435
	E. Wheel of reasons: <i>hetu-cakra</i>	435
	F. 'Eva'	437
	G. Universal connection	437
	H. Final form of the doctrine	439
§ 54.	Some other logical doctrines	440
	A. <i>Apoha</i>	441
	B. Definitions of <i>vyāpti</i>	441
	C. Some basic concepts	442
	D. The law of double negation	444
	E. Relation logic, definition of number	445
Summary		446
