PREFATORY STATEMENT OF SYMBOLIC CONVENTIONS . . . . .	vii
 <b>PART III. CARDINAL ARITHMETIC</b>	
Summary of Part III . . . . .	3
 <b>SECTION A. DEFINITION AND LOGICAL PROPERTIES OF CARDINAL NUMBERS . . . . .</b>	
*100. Definition and elementary properties of cardinal numbers . . . . .	13
*101. On 0 and 1 and 2 . . . . .	18
*102. On cardinal numbers of assigned types . . . . .	23
*103. Homogeneous cardinals . . . . .	35
*104. Ascending cardinals . . . . .	41
*105. Descending cardinals . . . . .	50
*106. Cardinals of relational types . . . . .	57
 <b>SECTION B. ADDITION, MULTIPLICATION AND EXPONENTIATION . . . . .</b>	
*110. The arithmetical sum of two classes and of two cardinals . . . . .	72
*111. Double similarity . . . . .	84
*112. The arithmetical sum of a class of classes . . . . .	93
*113. On the arithmetical product of two classes or of two cardinals . . . . .	101
*114. The arithmetical product of a class of classes . . . . .	119
*115. Multiplicative classes and arithmetical classes . . . . .	130
*116. Exponentiation . . . . .	138
*117. Greater and less . . . . .	165
General note on cardinal correlators . . . . .	179
 <b>SECTION C. FINITE AND INFINITE . . . . .</b>	
*118. Arithmetical substitution and uniform formal numbers . . . . .	187
*119. Subtraction . . . . .	194
*120. Inductive cardinals . . . . .	200
*121. Intervals . . . . .	226
*122. Progressions . . . . .	245
*123. $\aleph_0$ . . . . .	260
*124. Reflexive classes and cardinals . . . . .	270
*125. The axiom of infinity . . . . .	281
*126. On typically indefinite inductive cardinals . . . . .	285
 <b>PART IV. RELATION-ARITHMETIC</b>	
Summary of Part IV . . . . .	293
 <b>SECTION A. ORDINAL SIMILARITY AND RELATION-NUMBERS . . . . .</b>	
*150. Internal transformation of a relation . . . . .	298
*151. Ordinal similarity . . . . .	310
*152. Definition and elementary properties of relation-numbers . . . . .	320
*153. The relation-numbers $0_r$ , $2_r$ , and $1_r$ . . . . .	324
*154. Relation-numbers of assigned types . . . . .	329
*155. Homogeneous relation-numbers . . . . .	334

	PAGE
<b>SECTION B. ADDITION OF RELATIONS, AND THE PRODUCT OF TWO RELATIONS</b>	<b>337</b>
*160. The sum of two relations . . . . .	341
*161. Addition of a term to a relation . . . . .	347
*162. The sum of the relations of a field . . . . .	352
*163. Relations of mutually exclusive relations	358
*164. Double likeness . . . . .	365
*165. Relations of relations of couples . . . . .	375
*166. The product of two relations . . . . .	384
<b>SECTION C. THE PRINCIPLE OF FIRST DIFFERENCES, AND THE MULTIPLICATION AND EXPONENTIATION OF RELATIONS</b>	<b>391</b>
*170. On the relation of first differences among the sub-classes of a given class . . . . .	399
*171. The principle of first differences (continued) . . . . .	411
*172. The product of the relations of a field . . . . .	416
*173. The product of the relations of a field (continued) . . . . .	430
*174. The associative law of relational multiplication . . . . .	434
*176. Exponentiation . . . . .	444
*177. Propositions connecting $P_{df}$ with products and powers . . . . .	456
<b>SECTION D. ARITHMETIC OF RELATION-NUMBERS</b>	<b>458</b>
*180. The sum of two relation-numbers . . . . .	462
*181. On the addition of unity to a relation-number . . . . .	467
*182. On separated relations . . . . .	472
*183. The sum of the relation-numbers of a field . . . . .	481
*184. The product of two relation-numbers . . . . .	486
*185. The product of the relation-numbers of a field . . . . .	490
*186. Powers of relation-numbers . . . . .	492
<b>PART V. SERIES</b>	
Summary of Part V . . . . .	497
<b>SECTION A. GENERAL THEORY OF SERIES</b>	<b>500</b>
*200. Relations contained in diversity . . . . .	502
*201. Transitive relations . . . . .	508
*202. Connected relations . . . . .	516
*204. Elementary properties of series . . . . .	529
*205. Maximum and minimum points . . . . .	541
*206. Sequent points . . . . .	559
*207. Limits . . . . .	575
*208. The correlation of series . . . . .	585
<b>SECTION B. ON SECTIONS, SEGMENTS, STRETCHES, AND DERIVATIVES</b>	<b>591</b>
*210. On series of classes generated by the relation of inclusion . . . . .	594
*211. On sections and segments . . . . .	603
*212. The series of segments . . . . .	628
*213. Sectional relations . . . . .	644
*214. Dedekindian relations . . . . .	659
*215. Stretches . . . . .	665
*216. Derivatives . . . . .	674
*217. On segments of sums and converses . . . . .	683
<b>SECTION C. ON CONVERGENCE, AND THE LIMITS OF FUNCTIONS</b>	<b>687</b>
*230. On convergents . . . . .	692
*231. Limiting sections and ultimate oscillation of a function . . . . .	699
*232. On the oscillation of a function as the argument approaches a given limit . . . . .	708
*233. On the limits of functions . . . . .	716
*234. Continuity of functions . . . . .	724
