PREFATORY STATEMENT OF SYMBOLIC CONVENTIONS	vii
PART III. CARDINAL ARITHMETIC	
Summary of Part III	3
SECTION A. DEFINITION AND LOGICAL PROPERTIES OF CARDINAL NUMBERS	4
*100. Definition and elementary properties of cardinal numbers	13
*101. On 0 and 1 and 2	18
*102. On cardinal numbers of assigned types	23
*103. Homogeneous cardinals	35
*104. Ascending cardinals	41
*105. Descending cardinals	50
*106. Cardinals of relational types	57
SECTION B. ADDITION, MULTIPLICATION AND EXPONENTIATION	63
*110. The arithmetical sum of two classes and of two cardinals	72
*111. Double similarity	84
*112. The arithmetical sum of a class of classes	93
*113. On the arithmetical product of two classes or of two cardinals	101
*114. The arithmetical product of a class of classes	119
*115. Multiplicative classes and arithmetical classes	130
*116. Exponentiation	138
*117. Greater and less	165
General note on cardinal correlators	179
SECTION C. FINITE AND INFINITE	181
*118. Arithmetical substitution and uniform formal numbers	187
*119. Subtraction	194
*120. Inductive cardinals	200
*121. Intervals	226
*122. Progressions	245
*123. \aleph_n	260
*124. Reflexive classes and cardinals	270
*125. The axiom of infinity	281
*126. On typically indefinite inductive cardinals	285
PART IV. RELATION-ARITHMETIC	
Summary of Part IV	293
SECTION A. ORDINAL SIMILARITY AND RELATION-NUMBERS	295
*150. Internal transformation of a relation	298
*151. Ordinal similarity	310
*152. Definition and elementary properties of relation-numbers	320
*153. The relation-numbers 0, 2, and 1,	324
*154. Relation-numbers of assigned types	329
*155. Homogeneous relation-numbers	334

	PAGE
SECTION B. ADDITION OF RELATIONS, AND THE PRODUCT OF TWO RELATIONS	337
*160. The sum of two relations	341
*161. Addition of a term to a relation	347
*162. The sum of the relations of a field	352
*163. Relations of mutually exclusive relations	358
*164. Double likeness	365
*165. Relations of relations of couples	375
*166. The product of two relations	384
SECTION C. THE PRINCIPLE OF FIRST DIFFERENCES, AND THE MULTIPLICATION AND EXPONENTIATION OF RELATIONS	391
*170. On the relation of first differences among the sub-classes of a given class	399
*171. The principle of first differences (continued)	411
*172. The product of the relations of a field	416
*173. The product of the relations of a field (continued)	430
*174. The associative law of relational multiplication	434
*176. Exponentiation	444
*177. Propositions connecting P_{df} with products and powers	456
SECTION D. ARITHMETIC OF RELATION-NUMBERS	458
*180. The sum of two relation-numbers	462
*181. On the addition of unity to a relation-number	467
*182. On separated relations	472
*183. The sum of the relation-numbers of a field	481
*184. The product of two relation-numbers	486
*185. The product of the relation-numbers of a field	490
*186. Powers of relation-numbers	492
PART V. SERIES	
Summary of Part V	497
SECTION A. GENERAL THEORY OF SERIES	500
*200. Relations contained in diversity	502
*201. Transitive relations	508
*202. Connected relations	516
*204. Elementary properties of series	529
*205. Maximum and minimum points	541
*206. Sequent points	559
*207. Limits	575
*208. The correlation of series	585
SECTION B. ON SECTIONS, SEGMENTS, STRETCHES, AND DERIVATIVES	591
*210. On series of classes generated by the relation of inclusion	594
*211. On sections and segments	603
*212. The series of segments	628
*213. Sectional relations	644
*214. Dedekindian relations	659
*215. Stretches	665
*216. Derivatives	674
*217. On segments of sums and converses	683
SECTION C. ON CONVERGENCE, AND THE LIMITS OF FUNCTIONS	687
*230. On convergents	692
*231. Limiting sections and ultimate oscillation of a function	699
*232. On the oscillation of a function as the argument approaches a given limit	708
*233. On the limits of functions	716
*234. Continuity of functions	724
