

Table of Contents

Introduction

1	Plan of the book	1
2	Inheritance, transliteration and loan-translation	2
3	Roots and prefixes	4
4	The Indo-European language and its descendants	4
5	Vowel gradation	5
6	Consonant variation	5
7	The alphabet	6

Chapter I Alphabet

1	The Cyrillic alphabet	8
2	Memorizing the alphabet	9
3	History of the Cyrillic consonants	10
4	The vowel-symbols; the basic vowel-scheme	11
5	Hard and soft consonants	12
6	The spelling rule	13

Chapter II Pronunciation

1	Importance of pronunciation	16
2	The six Russian vowel-sounds	16
3	Monosyllables for practice in pronunciation	17
4	Remarks on hard and soft consonants	20
5	Hard and soft consonants in English and Russian	20
6	A first approximation to Russian pronunciation	24
7	The letter Ъ when pronounced but not written	25
8	The "separating" hard and soft signs	25
9	The letter Ы when written	25
10	Assimilation of voiced and voiceless consonants	25
11	Consonant clusters	27
12	Words of more than one syllable; accents	28

Chapter III Inflection

1	The concept of declension	33
2	The three declensions	34
3	Frequency of occurrence of nouns of the eight types	37
4	Declension in the plural	37
5	Remarks on the exercises	38
6	The concept of grammatical gender	39
7	Declension of pronouns	40
8	Declension of adjectives	43
9	The numerals	47
10	Adjective-noun phrases; italics	47
11	Comparative and superlative of adjectives and adverbs	49
12	The uninflected parts of speech	50
13	The verb; present imperfective and future perfective	54
14	The future imperfective and the past tense	57
15	The adjectival and adverbial participles	59

Chapter IV Aspect

1	Difference in meaning between the two aspects	65
2	Aspect regarded as a correspondence	66
3	Perfective partners and lexical compounds	67
4	The imperfectivizing suffixes	68
5	Table of aspectual and lexical compounds of verbs	69
6	Notes on the table	72

Chapter V Vocabulary

1	Plan of the chapter	73
2	The three "verbs of motion"	74
3	The root бер- (я-) <i>take</i>	78
4	The roots лар- <i>lay</i> and ста- <i>stand</i>	80
5	Verbs formed from adjectives	86
6	Twenty roots of considerable productivity	91
7	Forty roots of moderate productivity	104
8	Other nouns and adjectives	107

Readings

Preliminary remarks	108
<u>Section A Extracts from elementary analytic geometry and calculus</u>	
A1 Distance between points	109
A2 Division of a segment	110
A3 Polar coordinates	110
A4 Parallel translation of axes	111
A5 Rotation of axes	112
A6 Equations of the straight line	112
A7 The line through a point in a given direction	113
A8 Normal equation of the line	114
A9 General linear equation of the line	114
A10 The line through two given points	115
A11 Segments on the axis (i.e. intercepts)	116
A12 Definition of a vector	116
A13 Sum of vectors	117
A14 Scalar products	117
A15 General equation of the plane	118
A16 Parametric equations of a line in space	118
A17 Introduction of irrational numbers	119
A18 Continuity of the domain of real numbers	120
A19 Least upper and greatest lower bounds	120
A20 Fundamental theorem on real numbers	121
A21 The elementary functions	121
A22 Limit of a function	122
A23 Continuity of a function	122
A24 Heine-Borel and Weierstrass theorems	123
A25 Derivative of a function	124
A26 Equation of the tangent to a curve	125
A27 Maximum and minimum of a function	125
A28 Differentiation of a sum, difference, product	126
A29 Derivative of a composite function	127
A30 Indefinite integral	127
A31 Integration by change of variable	128
A32 Integration by parts	128
A33 Fundamental theorem of the integral calculus	129

Section B Extracts from elementary algebra and analysis

B1	Operations on sets	131
B2	Properties of the operations on sets	131
B3	One-to-one correspondence	132
B4	Equivalent sets	132
B5	Ordered sets	132
B6	Similar sets	133
B7	Algebraic operations	133
B8	Rings	133
B9	Examples of rings	134
B10	The zero of a ring	134
B11	Domains of integrity	134
B12	Fields	135
B13	Unit element	135
B14	Division	136
B15	Characteristic of a field; prime fields	136
B16	Isomorphism	136
B17	Ordered rings	137
B18	Properties of ordered rings	137
B19	Axiom of Archimedes	138
B20	The natural numbers	138
B21	Addition and multiplication of natural numbers	139
B22	Order of the natural numbers	139
B23	Subtraction and division of natural numbers	140
B24	Fundamental theorem of arithmetic	140
B25	The extension principle	141
B26	Performability of operations in an extension	142
B27	Equivalence classes	142
B28	The ring of integers up to isomorphism	142
B29	The ring of integers	143
B30	The field of rational numbers	144
B31	Quotient fields	144
B32	The field of real numbers	145
B33	The field of complex numbers	145

<u>Section C More advanced topics</u>		
C1	Functions of a real variable	146
C2	Functions of several complex variables	147
C3	Summability theory of divergent series	149
C4	Generalized functions	151
C5	Calculus of variations	155
C6	Theory of groups and generalizations	157
C7	Theory of numbers	160
C8	Mathematical logic	163
C9	Partial differential equations	166
C10	Hilbert space	169
C11	Differential geometry	173
C12	Topology	178
	<u>Glossary</u>	181
	<u>Name and Subject Index</u>	207
