Preface	xi
Symbols Commonly Used in Text	xvii
1 Basic Results	1
1.1 Definitions and Examples	1
1.2 Capelli Identities and Finite Dimensional Algebras	8
1.3 Graded Algebras and Grassman Algebras	11
1.4 Identities and Central Polynomials of Matrices	14
1.5 The Identity of Algebraicity	22
1.6 Review of Major Structure Theorems in PI-Theory	24
1.7 Representable Algebras	28
1.8 ACC in Ring Theory	39
2 Affine PI-algebras	41
2.1 Words Applied to Affine Algebras	43
2.2 Shirshov's Height Theorem	44
2.3 The Shirshov Program	52
2.4 The Trace Ring	52
2.5 The Razmyslov-Kemer-Braun Theorem	64
2.6 Shirshov's Lemma Revisited	69
3 <i>T</i>-Ideals and Relatively Free Algebras	79
3.1 Sets of Identities and <i>T</i> -Ideals	80
3.2 Relatively Free Algebras	81
3.3 Relatively Free Algebras Without 1, and Their <i>T</i> -Ideals	83
3.4 Recognizing <i>T</i> -Ideals	87
3.5 Specht's Problem Posed	88
3.6 Solution of Specht's Problem for Grassman Algebras	91

4 Specht's Problem in the Affine Case	95
4.1 Kemer's PI-Representability Theorem	95
4.2 The Kemer Index	101
4.3 Subdirectly Irreducible Algebras	107
4.4 Kemer's Lemmas	110
4.5 Specht's Problem Completed in the Affine Case	126
4.6 Appendix: Applying Kemer's Theory	128
4.7 Razmyslov-Zubrilin Traces Revisited	130
4.8 Pumping and d -Identities	135
5 Representations of S_n and Their Applications	141
5.1 Passage to $F[S_n]$	141
5.2 Review of the Representation Theory of S_n	144
5.3 S_n -Actions on $T^n(V)$	152
5.4 Codimensions and Regev's Exponential Bound Theorem . .	154
5.5 Multilinearization	163
5.6 Appendix: Representation Theory in Characteristic $p > 0$.	166
6 Superidentities and Kemer's Main Theorem	169
6.1 Superidentities	169
6.2 Kemer's PI-Superrepresentability Theorem	177
6.3 Consequences of Kemer's theory	191
7 PI-Algebras in Characteristic p	201
7.1 Positive Results	201
7.2 The Extended Grassman Algebra	204
7.3 Non-Finitely Based T -Ideals in Characteristic 2	209
7.4 Non-Finitely Based T -Ideals in Odd Characteristic	214
8 Recent Structural Results	235
8.1 Left Noetherian PI-algebras Are Finitely Presented	235
8.2 Identities of Group Algebras and Enveloping Algebras . .	240
9 Poincaré-Hilbert Series and Gelfand-Kirillov Dimension	245
9.1 The Hilbert Series of an Algebra	245
9.2 Gelfand-Kirillov Dimension	248
9.3 Upper Bounds for the Gelfand-Kirillov Dimension	259
9.4 Rationality of Certain Hilbert Series	260
9.5 The Multivariate Poincaré-Hilbert Series	265

10 More Representation Theory	267
10.1 Cocharacters	267
10.2 $GL(V)$ -Representation Theory	270
11 Unified Theory of Identities	279
11.1 Identities in Universal Algebra	279
11.2 Varieties	281
11.3 Examples of Varieties of Algebras and their Theories	284
12 Trace Identities	293
12.1 Trace Polynomials and Identities	293
12.2 Finite Generation of Trace T -Ideals	302
12.3 Trace Codimensions	305
13 Exercises	309
14 Lists of Theorems and Examples	343
14.1 Major Theorems	343
14.2 Major Examples and Counterexamples	352
15 Some Open Questions	355
Bibliography	359
Index	371
