

Contents

PART I

1	Algebra Review, Functions, and Modeling	1
	Pretest	2
	1.1 Solving linear equations and inequalities	3
	1.2 Graphs of linear equations in two variables	8
	1.3 Systems of equations in two variables—Graphical solution	16
	1.4 Systems of equations in two variables—Algebraic solution	21
	1.5 Functions and mathematical models	25
	1.6* (Optional) Business and economic applications	31
	Chapter Test	37
2	Linear Equations and the Echelon Method: Matrices	39
	2.1 The echelon method—Unique solutions	40
	2.2 The echelon method—Special cases	49
	2.3 Basic matrix properties	56
	2.4 Matrix multiplication	62
	2.5* (Optional) Computation of the matrix inverse	73
	Chapter Test	76

PART II

3	Linear Programming—An Introduction	79
	3.1 Graphing a linear constraint (inequality) in two variables	81
	3.2 Graphing a system of linear constraints in two variables	87
	3.3 Determining the optimum value	93
	3.4 Formulating maximum-type linear programs and solving graphically	99
	3.5 Formulating minimum-type linear programs and solving graphically	104
	3.6* (Optional) Post-optimality analysis	109
	Chapter Test	112

4	Linear Programming—The Simplex Algorithm	113
4.1	Maximum-type linear programs	114
4.2	Duality and minimum-type linear programs	131
4.3*	(Optional) The condensed tableau	141
4.4*	(Optional) Degeneracies and other special cases	149
	Chapter Test	158
5	Graphs and Networks	159
5.1	Trees and minimum spanning trees	160
5.2	Minimum paths and digraphs	167
5.3	Maximum flow through a network	177
	Chapter Test	183
PART III		
6	Sets and Counting Techniques	185
6.1	Sets	186
6.2	Union and intersection of sets and Venn diagrams	193
6.3	Experiments, trees, and distinguishability of outcomes	205
6.4	Counting techniques—Permutations	211
6.5	Counting techniques—Combinations	221
	Chapter Test	230
7	Probability	231
7.1	Introduction to probability	232
7.2	Compound events	240
7.3	Conditional probability and independent events— Multiplication theorem	246
7.4	The addition theorem	259
7.5	Conditional probability—Multiplication theorem	266
7.6	Conditional probability—Bayes' theorem	276
	Chapter Test	284
8	Random Variables—Statistics	285
8.1	Random variables and probability functions	286
8.2	Average and expected value	290
8.3	Variance and standard deviation	300
8.4	Bernoulli trials—Binomial probability	303

8.5* (Optional) Bernoulli trials—Geometric and negative probabilities	310
8.6 Standardized random variables and the normal probability distribution	316
Chapter Test	320
PART IV	
9 Markov Chains	321
9.1 Transition matrices and probability vectors	322
9.2 Regular and irregular Markov chains	329
9.3 Fixed points and “The Long Run”	333
Chapter Test	339
10 Games and Decisions	341
10.1 Pure strategies and matrix games	342
10.2 Mixed strategies: $m \times n$ and 2×2 games	353
10.3 Mixed strategies: $m \times 2$ and $2 \times n$ games	357
10.4 Voting coalitions and characteristic form	364
Chapter Test	370
FINAL EXAMINATION	371
Appendix on Logic	A1
A.1 Introduction	A2
A.2 Truth tables and tautologies	A11
A.3 Valid arguments	A14
A.4 Application to switching circuits	A18
Appendix Test	A23
ANSWERS	A25
INDEX	I1
