

CONTENTS

Preface	v
Introduction	
1 Objectives	1
2 Formal languages	2
2.1 The semantic consequence relation \models	2
2.2 The deducibility relation \vdash	3
2.3 Formal theories and the formalist programme	3
3 The history of the ε -symbol	4
4 The indeterminacy of the ε -symbol	5
5 Possible ways of defining formal languages	6
Chapter I Syntax and Semantics	
1 Introduction	9
2 The formal language $\mathcal{L}(\mathcal{V})$	10
2.1 Terms and formulae	12
2.2 A unifying classification of formulae	14
2.3 The cardinality of a language	16
3.1 Truth functions	16
3.2 Tautologies	17
3.3 Models	18
3.4 Satisfiability and the semantic consequence relation	22
4 The Satisfiability Theorem	23
4.1 Logical closures	30
5 Alternative interpretations of the ε -symbol	32
6 Languages without identity	36
Chapter II Formal Systems	
1.1 Finitary reasoning	37
1.2 General definitions	38
1.3 Axioms and rules of inference	39
2 The ε -calculus for \mathcal{V}	39
3 Derived rules of inference	41
3.1 The \rightarrow -introduction rule (Deduction Theorem)	42
3.2 Some theorems of the ε -calculus	43
4 Completeness of the ε -calculus	44

5	The Tautology Theorem	45
6	The consistency of the ε -calculus	47
7.1	Some derived rules for operating with quantifiers	48
7.2	Substitution instances and universal closures	51
7.3	The equivalence rule	52
7.4	Rule of relabelling bound variables	53
8	Prenex formulae	54
9	The addition of new function symbols	54
9.1	Skolem and Herbrand resolutions of prenex formulae	56
10	The elementary calculus	58
11	The predicate calculus	59
11.1	Derived rules of inference for the predicate calculus	61
11.2	The predicate calculus without identity	62
12	The formal superiority of the ε -calculus	63

Chapter III The ε -Theorems

1	Introduction	64
2.1	The basic problem	65
2.2	Proper and improper formulae	66
2.3	The ε^* -calculus	66
2.4	The usefulness of the ε^* -calculus	68
3.1	Subordination and rank	69
3.2	r, T_r -deductions	71
3.3	The Rank Reduction Theorem	72
3.4	The E2 Elimination Theorem	75
3.5	The First and Second ε -Theorems	77
4.1	Skolem's Theorem	79
4.2	Herbrand's Theorem	80
4.3	The eliminability of the identity symbol	83

Chapter IV Formal Theories

1	Introduction	85
2	Finitary consistency proofs	85
3	Formal arithmetic	88
3.1	Numerals and numerically true formulae	90
3.2	Formal arithmetic based on the ε -calculus	92
3.3	Quantifier-free proofs	94
3.4	The consistency of arithmetic	96
4	Theories based on the ε -calculus	100
4.1	The ι -symbol	100
4.2	Skolem functions	102
4.3	Definability of indeterminate concepts	103

4.4	The ε -symbol and the axiom of choice	105
5.1	The predicate calculus with class operator and choice function	107
5.2	The relative consistency of set theory based on the ε -calculus	112
Chapter V The Cut Elimination Theorem		
1	The sequent calculus	114
2	The axioms and rules of inference of the sequent calculus	115
2.1	Refutations	116
3	The subformula property of normal refutations	117
3.1	The eliminability of the identity symbol	118
4	The contradiction rule	118
4.1	The relationship between the sequent calculus and ε -calculus	120
5	k, F_k -refutations	121
5.1	The invertibility of the logical rules	121
6	The Cut Elimination Theorem	124
6.1	Applications	126
Bibliography		129
Index of Symbols		134
Index of Rules of Inference		137
General Index		139
