Pons Asinorum 1

Chapter 0. On the Choice of Correct Notions for the General Theory 3

0.1 Finite Algorithmic Procedures 3
0.2 FAP and Inductive Definability 7
0.3 FAP and Computation Theories 8
0.4 Platek's Thesis 11
0.5 Recent Developments in Inductive Definability 12

Part A. General Theory 17

Chapter 1. General Theory: Combinatorial Part 19

1.1 Basic Definitions 19
1.2 Some Computable Functions 22
1.3 Semicomputable Relations 25
1.4 Computing Over the Integers 27
1.5 Inductively Defined Theories 29
1.6 A Simple Representation Theorem 34
1.7 The First Recursion Theorem 38

Chapter 2. General Theory: Subcomputations 43

2.1 Subcomputations 43
2.2 Inductively Defined Theories 45
2.3 The First Recursion Theorem 48
2.4 Semicomputable Relations 50
2.5 Finiteness 52
2.6 Extension of Theories 54
2.7 Faithful Representation 57

Part B. Finite Theories 63

Chapter 3. Finite Theories on One Type 65

3.1 The Prewellordering Property 65
3.2 Spector Theories 72
3.3 Spector Theories and Inductive Definability 79

Chapter 4. Finite Theories on Two Types 90

4.1 Computation Theories on Two Types 90
4.2 Recursion in a Normal List 96
4.3 Selection in Higher Types 99
4.4 Computation Theories and Second Order Definability 105

Part C. Infinite Theories 107

Chapter 5. Admissible Prewellorderings 109

5.1 Admissible Prewellorderings and Infinite Theories 111
5.2 The Characterization Theorem 117
5.3 The Imbedding Theorem 122
5.4 Spector Theories Over ω 126

Chapter 6. Degree Structure 140

6.1 Basic Notions 140
6.2 The Splitting Theorem 149
6.3 The Theory Extended 157

Part D. Higher Types 165

Chapter 7. Computations Over Two Types 167

7.1 Computations and Reflection 167
7.2 The General Plus-2 and Plus-1 Theorem 171
7.3 Characterization in Higher Types 179

Chapter 8. Set Recursion and Higher Types 182

8.1 Basic Definitions 182
8.2 Companion Theory 184
8.3 Set Recursion and Kleene-recursion in Higher Types 187
8.4 Degrees of Functionals 194
8.5 Epilogue 203
