Preface	vii
Chapter 1. Transformation Theory	1
1.1. Differential Equations and Vector Fields	1
1.2. Variational Principles, Hamiltonian Systems	11
1.3. Canonical Transformations	19
1.4. Hamilton-Jacobi Equations	29
1.5. Integrals and Group Actions	41
1.6. The $SO(4)$ Symmetry of the Kepler Problem	52
1.7. Symplectic Manifolds	62
1.8. Hamiltonian Vector Fields on Symplectic Manifolds	73
Chapter 2. Periodic Orbits	85
2.1. Poincaré's Perturbation Theory of Periodic Orbits	85
2.2. A Theorem by Lyapunov	94
2.3. A Theorem by E. Hopf	98
2.4. The Restricted 3-Body Problem	102
2.5. Reversible Systems	108
2.6. The Plane 3- and 4-Body Problems	116
2.7. Poincaré-Birkhoff Fixed Point Theorem	120
2.8. Variations on the Fixed Point Theorems	133
2.9. The Billiard Ball Problem	140
2.10. A Theorem by Jacobowitz and Hartman	149
2.11. Closed Geodesics on a Riemannian Manifold	160
2.12. Periodic Orbits on a Convex Energy Surface	172
2.13. Periodic Orbits Having Prescribed Periods	181
Chapter 3. Integrable Hamiltonian Systems	187
3.1. A Theorem of Arnold and Jost	187
3.2. Delaunay Variables	199
3.3. Integrals via Asymptotics; the Störmer Problem	207
3.4. The Toda Lattice	213
3.5. Separation of Variables	228
3.6. Constrained Vector Fields	234
3.7. Isospectral Deformations	242
Bibliography	255
