

PREFACE . . . . .	vii
HINTS FOR THE READER . . . . .	xiii
PART I. TOWARDS THE THEORY . . . . .	1
1. Introduction . . . . .	3
1.1. Aspects of the lambda calculus . . . . .	3
1.2. Complete partial orders and the Scott topology . . . . .	9
1.3. Exercises . . . . .	19
2. Conversion . . . . .	22
2.1. Lambda terms and conversion . . . . .	22
2.2. Some variants of the theory . . . . .	35
2.3. Survey of part II . . . . .	43
2.4. Exercises . . . . .	49
3. Reduction . . . . .	50
3.1. Notions of reduction . . . . .	50
3.2. Beta reduction . . . . .	59
3.3. Eta reduction . . . . .	63
3.4. Survey of part III . . . . .	67
3.5. Exercises . . . . .	73
4. Theories . . . . .	76
4.1. Lambda theories . . . . .	76
4.2. Survey of part IV . . . . .	83
4.3. Exercises . . . . .	85
5. Models . . . . .	86
5.1. Combinatory algebras . . . . .	87
5.2. Lambda algebras and models . . . . .	90

5.3. Homomorphisms, interiors and term models. . . . .	100
5.4. First order descriptions. . . . .	109
5.5. Survey of part V. . . . .	119
5.6. Exercises. . . . .	124

**PART II. CONVERSION. . . . . 125**

**6. Classical Lambda Calculus. . 127**

6.1. Fixed point combinators. . . . .	127
6.2. Standard combinators. . . . .	128
6.3. Lambda definability. . . . .	131
6.4. Numeral systems. . . . .	135
6.5. More about fixed points; Gödel numbers. . . . .	137
6.6. Undecidability results. . . . .	140
6.7. Self-referential sentences and the recursion theorem. . . . .	142
6.8. Exercises. . . . .	144

**7. The Theory of Combinators . 147**

7.1. Combinatory logic. . . . .	147
7.2. Reduction for <i>CL</i> . . . . .	150
7.3. The relation between <i>CL</i> and $\lambda$ . . . . .	152
7.4. Exercises. . . . .	159

**8. Classical Lambda Calculus  
(Continued). . . . . 161**

8.1. Bases and enumeration. . . . .	161
8.2. Uniformity; infinite sequences. . . . .	164
8.3. Solvability; head normal forms. . . . .	167
8.4. Definability of partial functions. . . . .	174
8.5. Exercises. . . . .	179

<b>9. The <math>\lambda I</math>-Calculus . . . . .</b>	<b>181</b>
9.1. Generalities . . . . .	181
9.2. Definability . . . . .	183
9.3. Combinators . . . . .	188
9.4. Solvability . . . . .	195
9.5. Exercises . . . . .	209
<b>10. Böhm Trees . . . . .</b>	<b>211</b>
10.1. Basics . . . . .	211
10.2. Comparing Böhm trees; the tree topology on $\Lambda$ . . . . .	225
10.3. The Böhm out technique . . . . .	241
10.4. Separability of terms . . . . .	250
10.5. Separability in the $\lambda I$ -calculus . . . . .	256
10.6. Exercises . . . . .	266
<b>PART III. REDUCTION . . . . .</b>	<b>269</b>
<b>11. Fundamental Theorems . . . . .</b>	<b>273</b>
11.1. The Church–Rosser theorem . . . . .	273
11.2. The finiteness of developments . . . . .	279
11.3. The conservation theorem for $\lambda I$ . . . . .	289
11.4. Standardization . . . . .	292
11.5. Exercises . . . . .	297
<b>12. Strongly Equivalent     Reductions . . . . .</b>	<b>298</b>
12.1. Reduction diagrams . . . . .	298
12.2. Strong versions of CR and FD! . . . . .	307
12.3. Strong version of standardization . . . . .	313
12.4. Exercises . . . . .	319
<b>13. Reduction Strategies . . . . .</b>	<b>320</b>
13.1. Classification of strategies . . . . .	320
13.2. Effective normalizing and cofinal strategies . . . . .	322
13.3. A recursive CR strategy . . . . .	329
13.4. An effective perpetual strategy . . . . .	334
13.5. Optimal strategies . . . . .	340
13.6. Exercises . . . . .	345
<b>14. Labelled Reduction . . . . .</b>	<b>348</b>
14.1. Strong normalization . . . . .	348
14.2. Applications . . . . .	355
14.3. Continuity . . . . .	360
14.4. Sequentiality and stability . . . . .	371
14.5. Exercises . . . . .	378

15. Other Notions of Reduction	380
15.1. $BH$ -reduction	380
15.2. $BH\Omega$ -reduction	384
15.3. Delta reduction	396
15.4. Exercises	403
<b>PART IV. THEORIES</b>	<b>405</b>
16. Sensible Theories	407
16.1. The theory $\mathfrak{K}$	407
16.2. The theory $\mathfrak{K}^*$	412
16.3. $2^{*0}$ sensible theories	417
16.4. The theory $\mathfrak{B}$	421
16.5. Exercises	425
17. Other Lambda Theories	427
17.1. Semi-sensible and r.e. theories	427
17.2. Omega theories	433
17.3. Partial validity of the $\omega$ -rule in $\lambda\eta$	441
17.4. The $\omega$ -rule and $\mathfrak{K}\eta$	453
17.5. Exercises	461
<b>PART V. MODELS</b>	<b>463</b>
18. Construction of Models	465
18.1. General construction	465
18.2. The graph model $P\omega$	467
18.3. The models $D_\infty$	475
18.4. The model $\mathfrak{B}$	485
18.5. Exercises	491
19. Local Structure of Models	496
19.1. Local structure of $P\omega$	496
19.2. Local structure of $D_\infty$	504
19.3. Continuous $\lambda$ -models	508
19.4. Exercises	511
20. Global Structure of Models	513
20.1. Extensionality	513
20.2. The range property	515
20.3. Nondefinability results	517
20.4. Local vs. global representability	519
20.5. The tree topology on models	524
20.6. Exercises	528

21. Combinatory Groups . . . . .	530
21.1. Combinatory semigroups . . . . .	530
21.2. Characterization of invertibility . . . . .	533
21.3. The groups $G(\lambda\eta)$ and $G(\mathfrak{K}^*)$ . . . . .	545
21.4. Exercises . . . . .	552

APPENDICES . . . . .	555
----------------------	-----

Appendix A. Typed Lambda Calculus . . . . .	559
--	-----

A.1. The pure typed lambda calculus . . . . .	559
A.2. Primitive recursive functionals . . . . .	566
A.3. Formulae as types . . . . .	570

Appendix B. Illative Combinatory Logic . . . . .	.571
Appendix C. Variables . . . . .	.575
Final exercises . . . . .	579
References . . . . .	.580
Index of Names . . . . .	.593
Index of Definitions . . . . .	599
Index of Symbols . . . . .	.605
