Introduction	ix
CHAPTER 1. Recursion and $\omega$ -recursion Theories	1
1. Introduction	1
2. Structures	2
3. Elementary formal systems	3
4. Examples	5
5. Remarks	8
6. Informal motivation	10
7. Enumeration operators	10
8. Informal motivation	11
9. $\omega$ -elementary formal systems	12
10. Basic structural properties	13
11. Recursion and $\omega$ -recursion theories	17
12. The least fixed point theorem	17
13. Inductive definability	20
14. $R$ -definability	25
CHAPTER 2. Production Systems	28
1. Introduction	28
2. Production systems	29
3. Elementary results	31
4. Reducibility	35
5. Pointwise generated functions	40
6. Production systems with equality	43
7. Closure under least fixed point	45
8. A Kleene–Post result	47
CHAPTER 3. Embeddings	53
1. Introduction	53
2. Codings	53
3. Pre-embeddings	55

4. Embeddings and co-embeddings	57
5. Theory assignments	58
6. Examples	61
7. The category of production systems	62
<b>CHAPTER 4. Combining Production Systems</b>	<b>64</b>
1. Introduction	64
2. Combining domains and codings	65
3. Symmetric monoidal categories	66
4. A few technical results	67
5. Combining structures	70
6. Recursion theories, for example	71
7. Combining production systems	72
8. Combining embeddings	74
9. Monoidal subcategories in <b>Prod</b>	76
10. Separability	78
11. A few results about separability	82
12. Injections and co-embeddings	84
<b>CHAPTER 5. Effective Embeddings</b>	<b>89</b>
1. Introduction	89
2. Effective embeddings	90
3. Results about effective embeddings	91
4. Reflexivity	96
5. An “effective” symmetric monoidal category	98
6. Extensions	99
7. Isomorphisms	101
<b>CHAPTER 6. Indexed Recursion and <math>\omega</math>-recursion Theories</b>	<b>107</b>
1. Introduction	107
2. Elaborating a structure	108
3. Recursion and $\omega$ -recursion theories	110
4. $\Sigma$ completeness	112
5. Elementary formal systems and $\Sigma$ completeness	113
6. Separability	116
7. Reflexivity	118
8. Sequence codings	119
9. Adding letters	121
10. Copies and extensions	125
11. Universal machines	127
12. Operator indexing	134
13. Input and output place-fixing theorems	135
14. Indexing revisited	136
15. Relational indexing	140
16. Finite codes	142

CHAPTER 7. Indexed Relational Systems	147
1. Introduction	147
2. Immediate consequences	148
3. Fixed point theorems	150
4. Rice's theorem	153
5. Creative sets	156
6. Kleene–Mostowski systems	159
7. The Rice–Shapiro theorem	164
CHAPTER 8. Indexed Production Systems	172
1. Introduction	172
2. Indexed production systems	172
3. The output place-fixing property	173
4. The input place-fixing property	177
5. Pointwise generated functions, again	181
6. $\mathcal{Q}$ -finiteness	183
7. Rogers' form for operators	186
8. Effective pairing	189
9. Non-compact operators	192
10. All the $\mathcal{Q}$ -finiteness assumptions together	193
11. The least fixed point theorem	196
12. Metacompactness	204
13. Semi-hyperregularity	207
14. Compact cores	212
15. The least fixed point theorem, again	218
CHAPTER 9. Admissible Set Recursion Theories	222
1. Introduction	222
2. Admissible sets	225
3. Terminology	228
4. Elementary formal systems over admissible sets	229
5. Basic results	233
6. Examples	236
7. Enumeration operators generalized	239
8. Structural properties	241
9. More examples	243
10. Pre-embeddings and embeddings	244
11. Combining augmented <b>F</b> -structures	245
12. More monoidal subcategories in <b>Prod</b>	246
13. Extensions, again	247
14. Indexed relational systems	249
15. Indexed production systems	251
16. Remarks on $\alpha$ -recursion theory	253

<b>CHAPTER 10. Effective Operators of Higher Types</b>	<b>256</b>
1. Introduction	256
2. Operators with several inputs	257
3. Effective type 2 operators	259
4. Properties of effective type 2 operators	264
5. Effective type 3 operators	269
6. Examples of effective type 3 operators	275
7. The least fixed point theorem, again	283
8. Higher types	288
9. Indexing	290
10. Conclusion	291
<b>APPENDIX</b>	<b>294</b>
<b>BIBLIOGRAPHY</b>	<b>297</b>
<b>INDEX</b>	<b>303</b>
