## Foreword

Chapter 0. Introduction	1
1. The Incompleteness Theorems	3
2. Self-Reference	11
3. Things to Come	12
4. The Theory PRA	16
5. Encoding Syntax in PRA	25
6. Additional Arithmetic Prerequisites	45
PART I. THE LOGIC OF PROVABILITY	
Chapter 1. Provability as Modality	63
1. A System of Basic Modal Logic	65
2. Provability Logic(s)	71
3. Self-Reference in PRL	76
4. Avoiding $R2$	85
Chapter 2. Modal Model Theory	87
1. Model Theory for BML	88
2. Model Theory for PRL	100
3. Models and Self-Reference	109
4. Another Provability Logic	128
Chapter 3. Arithmetic Interpretations of PRL	133
1. Solovay's First Completeness Theorem	134
2. Solovay's Second Completeness Theorem	143
3. Generalisations, Refinements, and Analogues	150
PART II. MULTI-MODAL LOGIC AND SELF-REFERENCE	
Chapter 4. Bi-Modal Logics and Their Arithmetic Interpretations	167
1. Bi-Modal Self-Reference	172
2. Kripke Models	181
3. Carlson Models	195

4. Carlson's Arithmetic Completeness Theorem	205
Chapter 5. Fixed Point Algebras	217
1. Boolean and Diagonalisable Algebras	220
2. Fixed Point Algebras	233
3. Discussion	252
PART III. NON-EXTENSIONAL SELF-REFERENCE	
Chapter 6. Rosser Sentences	255
1. Modal Systems for Rosser Sentences	259
2. Arithmetic Interpretations	278
3. Inequivalent Rosser Sentences	289
Chapter 7. An Ubiquitous Fixed Point Calculation	298
1. An Ubiquitous Fixed Point Calculation	300
2. Applications	307
3. Relativisation to a Partial Truth Definition	318
4. Švejdar's Self-Referential Formulae	323
Bibliography	330
