

CONTENTS

Introduction	v
Chapter 1 - REVIEW OF AXIOMATIC SET THEORY	
§ 1. First group of axioms for ZF, finite set, axiom of choice, König's theorem	1
§ 2. Second group of axioms for ZF: foundation, infinity, substitution; ordinal, integer, countable set	6
§ 3. Review of ordinal algebra, Cantor normal form, indecomposable ordinal	12
§ 4. Equipotent with the continuum, continuum hypothesis, real	15
§ 5. Transitive closure, hereditarily finite set, fundamental rank, cardinal	18
§ 6. Aleph, Hartogs, aleph rank	20
§ 7. Filter, ultrafilter axiom	22
§ 8. Topology on sets of integers	24
§ 9. Natural sum and product for ordinals	26
Exercises	26
Chapter 2 - RELATION, PARTIAL ORDERING, CHAIN, ISOMORPHISM, COFINALITY	
§ 1. Relation, multirelation, restriction, extension, coherence lemma, axiom of dependent choice	29
§ 2. Quasi-ordering, partial ordering, chain, well-founded partial ordering, well-ordering, well-orderable set, Hausdorff-Zorn axiom	33
§ 3. Isomorphism, automorphism, height of a well-founded partial ordering, sum and product of chains, homomorphic image	37
§ 4. Reinforced relation, reinforced partial ordering	42
§ 5. Cofinal subset, co-initial subset, cofinality of a chain	44
§ 6. Regular and singular aleph, accessibility	47
§ 7. Cofinality of a partial ordering, cofinal height	50
§ 8. Set of subsets, set of injective functions, increasing functions on the reals, intermediacy, consecutivity, cycle, cyclic relation	53
Exercises	56
Chapter 3 - RAMSEY THEOREMS, PARTITIONS, COMBINATORIAL PRINCIPLES	
§ 1. Ramsey's theorem	61
§ 2. Lexicographically ordered set, Galvin's initial interval theorem, Nash-Williams' theorem	66
§ 3. Uncountable case, partition theorems: Dushnik, Miller, Erdős, Rado	69
§ 4. Combinatorial lemmas, color and inclusion	77
§ 5. Incidence matrix, Kantor's linear independence lemma, multicolor theorem	80
§ 6. Ramsey sequence; another proof of Galvin's theorem	83
Exercises	86

Chapter 4 - GOOD AND BAD SEQUENCE, FINITELY FREE PARTIAL ORDERING, WELL PARTIAL ORDERING, IDEAL, TREE, DIMENSION	
§ 1. Partial ordering of the initial intervals, partition in slices	91
§ 2. Less than relation among sequences, embedding between sequences, good, bad, minimal bad, strongly minimal bad sequence	96
§ 3. Finitely free partial ordering, well partial ordering	102
§ 4. Initial intervals of a well partial ordering; Rado's well partial ordering; Higman's theorem on the well partial ordering of words	106
§ 5. Net, or directed partial ordering; ideal, decomposition of a finitely free partial ordering into ideals	110
§ 6. Tree	112
§ 7. Direct product of partial or total orderings; dimension	115
§ 8. Bound	119
§ 9. Maximal reinforced chain theorem for a well partial ordering: De Jongh, Parikh; extraction property	122
§ 10. Cofinality of a finitely free partial ordering	124
Exercises	126
Chapter 5 - EMBEDDABILITY BETWEEN PARTIAL OR TOTAL ORDERINGS	
§ 1. Embeddability, immediate extension, faithful extension	131
§ 2. Embeddability between partial orderings; well partial ordering of finite trees (Kruskal); Cantor's theorem for partial orderings (Dilworth, Gleason); tournament	135
§ 3. Dense chain; α -dense chain, for an infinite cardinal α	138
§ 4. Immediate extension of a chain; faithful extension of a chain	142
§ 5. Decreasing sequences and sets of incomparable chains of reals: Dushnik, Miller, Sierpinski	146
§ 6. Suslin chain and Suslin tree	148
§ 7. Aronszajn tree, Specker chain	152
§ 8. Faithful infinite extension: Malitz' and Lopez' counterexamples	155
Exercises	157
Chapter 6 - SCATTERED CHAIN, NEIGHBORHOOD, INDECOMPOSABILITY	
§ 1. Scattered chain	159
§ 2. Decomposition of a chain into a sum of scattered chains; neighborhood; strongly scattered chain, neighborhood rank	161
§ 3. Indecomposable chain, right or left indecomposable chain	164
§ 4. Union and intersection of indecomposable chains, covering by indecomposable chains or by doublets	168
§ 5. Hereditarily indecomposable chain	171
§ 6. Indivisible relation or chain	174
Exercises	175
Chapter 7 - USE OF SCATTERED CHAINS FOR THE STUDY OF FINITELY FREE AND WELL PARTIAL ORDERINGS	
§ 1. Reinforcement of a partial ordering by scattered chains	177
§ 2. Supplementary results about finitely free partial orderings; topology on initial intervals	181
§ 3. Every directed well partial ordering has a cofinal restriction isomorphic with a direct product of regular alephs (Pouzet)	186
§ 4. Szpilrajn chain, denumerably Szpilrajn chain	195
Exercises	199

Chapter 8 - BARRIER, BARRIER SEQUENCE, FORERUNNING, EMBEDDABILITY THEOREM FOR SCATTERED CHAINS, BETTER PARTIAL ORDERING	
§ 1. Barrier, barrier partition theorem, successive elements, square of a barrier	203
§ 2. Barrier sequence, theorem on the minimal bad barrier sequence (Nash-Williams)	208
§ 3. Forerunning between barriers and barrier sequences	211
§ 4. Embeddability theorem for scattered chains (Laver)	216
§ 5. Indecomposable sequence, better partial ordering	220
§ 6. Better partial ordering with respect to barriers, or "better partial ordering"	226
§ 7. Equivalence of both notions of better partial ordering; chain sequence in a partial ordering	232
Exercises	237
Chapter 9 - ISOMORPHISM AND EMBEDDABILITY BETWEEN RELATIONS, LOCAL ISOMORPHISM, FREE INTERPRETABILITY, CONSTANT RELATION, CHAINABLE AND MONOMORPHIC RELATION	
§ 1. Permutation, transposition, local isomorphism and local automorphism	239
§ 2. Free interpretability, dimensional arity	242
§ 3. Free operator, connection with free interpretability	246
§ 4. Constant relation	250
§ 5. Chainable relation	253
§ 6. Monomorphic relation	258
§ 7. Profile of a relation, profile increase theorem (Pouzet)	266
§ 8. Homomorphic image of an arbitrary relation	267
§ 9. Bivalent table	269
Exercises	271
Chapter 10 - AGE, RICH RELATION, INEXHAUSTIBLE RELATION, SATURATED RELATION, EXISTENCE CRITERION FOR A RICH RELATION OF A GIVEN AGE	
§ 1. Projection filter, older relation, 1-extension, $(1,p)$ -morphism and $(1,p)$ -isomorphism	273
§ 2. Closed under embeddability, directed under embeddability, age	278
§ 3. Relative restriction, relative isomorphism, rel-age, maximalist relation	281
§ 4. Rich relation, α -morphism	287
§ 5. Inexhaustible relation and inexhaustible age	291
§ 6. A relation rich for its age, a relation minimal for its age	295
§ 7. Saturated relation, existence criterion for a rich relation for its age (Pouzet, Vaught)	299
§ 8. Finitist relation	304
§ 9. Almost chainable relation	307
Exercises	310
Chapter 11 - HOMOGENEOUS RELATION, RELATIONAL SYSTEM, CONNECTION WITH PERMUTATION GROUPS, ORBIT	
§ 1. Homogeneous relation; amalgamable set and amalgamable age	313
§ 2. Relational system; orbit; adherence of a permutation group;	

theorem of the increasing number of orbits (Livingstone, Wagner)	317
§ 3. Chains compatible modulo a permutation group; group generated by chains; dilated group, contracted group	323
§ 4. Indicative group, reduction theorem (Frasnay)	327
§ 5. Q-bichain, Q-indicative group; five Q-indicative group theorem; set-transitive group theorem (Cameron)	330
§ 6. Extensive subset, pseudo-homogeneous relation	337
§ 7. Prehomogeneous relation	340
§ 8. Set-homogeneous relation, set-pseudo-homogeneous relation	345
Exercises	348
Chapter 12 - BOUND OF A RELATION; WELL RELATION; REASSEMBLING THEOREM	
§ 1. Bound of a relation	351
§ 2. Preservation of bounds in the passage from a relation to some of its extensions	357
§ 3. Well multirelation; reassembling theorem (Frasnay)	359
§ 4. Reduction threshold, reassembling threshold, G-chain	365
§ 5. Monomorphism thresholds, chainability threshold	368
§ 6. Finitely bounded age, universal class, antibound	370
BIBLIOGRAPHY	373
