

Table of contents

1. The impredicativity of induction	1
2. Logical terminology	3
3. The axioms of arithmetic	8
4. Order	10
5. Induction by relativization	12
6. Interpretability in Robinson's theory	16
7. Bounded induction	23
8. The bounded least number principle	29
9. The Euclidean algorithm	32
10. Encoding	36
11. Bounded separation and minimum	43
12. Sets and functions	46
13. Exponential functions	51
14. Exponentiation	54
15. A stronger relativization scheme	60
16. Bounds on exponential functions	64
17. Bounded replacement	70
18. An impassable barrier	73
19. Sequences	82
20. Cardinality	90
21. Existence of sets	95
22. Semibounded replacement	98
23. Formulas	101
24. Proofs	111
25. Derived rules of inference	115
26. Special constants	134
27. Extensions by definition	136

28. Interpretations	152
29. The arithmetization of arithmetic	157
30. The consistency theorem	162
31. Is exponentiation total?	173
32. A modified Hilbert program	178
Bibliography	181
General index	183
Index of defining axioms	186
